Texass much ments (erporduced below, along with our response).         weer And that's really already. And HHCA should be prioritized. So why can't hew you wan't there are write the so much money in DHH already. And HHCA should be prioritized. So why can't hew you wan't there are be lot since the write the cost. And already and the long be are development. DHH.         weer sameler. It takes long to to sist met already in the residential because of having to development is residentia bease of a lot since the are for voing are development.  
   | or the in poverty/III Some families are so fortunate and were able to get a lot. My family has not been portunity.       On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your emanater plan.         portunity.       MAXSWITN MAK.       On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your emanater plan.         that you include residential in the first plase. I would like to get a lot in this decade.       My would like to get a lot in this decade.       My much would like to get a lot in this decade.         wer. And that's really already. The Honokowai first phase. So that we can have a lot in the forokowai in their to so.       My much monetsion the first phase. So that we can have a lot in this decade.       MAXSWITN MAK.       We acknowledge your comments (reproduced below, along with our response).         were And that's really already. And HICLS abould be prioritized for that are addicated berow. There is so much money in DHHL already. And HICLS abould be prioritized. So why can't they to mach money in DHHL already. And HICLS abould be prioritized. So why can't they to mean and have it all built at one time. Why stretch it out in phases? Haft to enserve through to mestead in west having to deal with so much money in DHHL already. And HICLS abould be prioritized. So why can't they to mean and have it all built at one time. Why stretch it takes for the department is ontime to the low and older. They are going to the development DHHL.       Maters plan will be providing resident in would get a los increated away with be prioritized. So why can't they to mean and be are for tooks and nonestead diversion in performance. That would get a los increated awais obto mease and have it all built at one tine. Why stretch in phases? Haft to thome tase is a s   
   | oncl live in povertyfill Some families are so fortunate and were able to get a lot. My family has not been popertuity.       On behalf of the Department of Hawaian Home Lands (DHHL), thank you for your ema able to get a lot in this decade. My would like to be a lot in this decade. My would like to be able to find with and your some transment (Draft EA) consultation that you include residential in the Honokowai first phase. So that we can have a lot in this decade.       On behalf of the Department of Hawaian Home Lands (DHHL), thank you for your ema able to popertuit the first phase. I would like to get a lot in this decade. My work inter for St. My family doesn't, hear a lot in this decade.         wer. And that's really already in the FOS. My family doesn't have a lot of logewit.       Department of the Department of HAHL HonoKowai Master Plan.         wer. And that's really already in the FOS. My family doesn't have a log on the decade.       DHHL understands the urgency with which you and your 'ohana seek a residentia wait's wait's wait's wait's really already.         wer. So that we can have a lot in this decade.       DHHL understands the urgency with which you and your 'ohana seek a residentia wait's wait's wait. The HonoKowai homestead development of in weat may with which you and your 'ohana seek a residentia wait's wait. The would help reduce the waitlift that what you include residentia wait's wait. That you include residentia wait's wait. That you include residentia wait's wait. The HonoKowai homestead development of in the for the HonoKowai homestead development of in weat may with which you and your 'ohana seek a residentia wait's wait. The reap. And HUC, Soo to 27,100 Actually if more residentia wait's wait. That would help reduce the waitilfs from trade of a way way in the for the HonoKowai homestead in West Mau.   | ond live in poverty/III Some families are so fortunate and were able to get a lot. My family has not been poperturinty.       On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your emanator of the Department of Hawaiian Home Lands (DHHL), thank you for your emanator of the Department of Hawaiian Home Lands (DHHL), thank you for your emanator of the Department of Hawaiian Home Lands (DHHL), thank you for your emanator of the Department of Hawaiian Home Lands (DHHL), thank you for your emanator of the Department of Hawaiian Home Lands (DHHL), thank you for your emanator of the DHL Honokowai Master Plan.         onter statistic correction in the fortoweal first phase. So that we can have a lot in this decade. My with you want? They are going the that's really areadon in the lonokowai first phase. So that we can have a lot in this decade. My with phases and have it all built at one time. Why stretch it out in phase? Haft the solution of the perioding resident in waitis would perete to do away with phases and have it all built at one time. Why stretch it out in phase? Haft the solution of the perioding resident in the lonokowai master al point mitries in HHL will be providing resident in phase. So why can't they are donokowai homestead development plan will be providing resident in the streage of and loter. They are donokowai homestead development of it wattow and be are areadon in the resolution of a point in the streage of the DHHL already. And HCA should be providing resident in the streage of a built at one time. Why stretch is on the master of a boung to the streage of a built be providing resident in the streage of a built be providing resident in the streage of a built be providing resident in the streage of a built be providing resident in the streage of the DHHL development is contingent the providing resident in the streage of the DHHL development is conthereaded in west hat with the streage of the DHHL development is  |

rom: Wayne Hedani ©gmail.com > ent: Friday, July 9, 2021 10:09 AM o: julie-ann.cachola@havaii.gov; Selena Pang	c: Glenn Gazmen; Loretta Lau ubject: Honokowai Master Plan	ulie-ann:	am not Hawaiian but my daughter in law is. These are my comments on the plan as presented in the Maui News. I h 0 years of experience on the Maui Planning Commission: . DHHI should prioritize setting the most number of Hawaiians onto Hawaiian Homes lands neriod. Give them a deor	a and get out of the way. Two acre ag lots should be abolished in the state in its entirety. It is a disaster and a goldmine for millionaires, the l hing Hawaiians need. It wastes land which could be evailable to other beneficiaries. Its stupid.	. Prepare decent lots and maximize the number of lots available. 1500 lots. . Add a community garden area for subsistence agriculture with infrastructure if you must. Each home can actually	row its own food in victory gardens if well planned without the need for community gardens using current technolog . Quit planning and start building.	loha, Vayne N. Hedani	Vailuku HI 96793.	h.

Department of Hawaiian Home Lands State of Hawaii ATTN: Julie-Ann Cachola, Senior Planner P.O. Box 1879 Honolulu, HI 96805

PBR HAWAII & Associates, Inc. ATTN: Catie Cullison, Principal 1001 Bishop Street, Suite 650 Honolulu, Hawaii 96813 Dear Ms. Cachola and Cullison:

Subject: Draft Environmental Assessment for DHHL Honokowai Master Plan, Honokowai Ahupuaa, Kaanapali Moku, Lahaina District County of Maui TMK (2) 4-4-001: 015, (2) 4-4-002: 003, 008, 009, 011, 015, 018, and 038 The Hawaii Housing Finance and Development Corporation (HHFDC) appreciates the opportunity to review the DHHL Honokowai Master Plan, Draft Environmental Assessment, dated July 2021. HHFDC supports the proposed project as it will increase housing opportunities for native Hawaiian households.

The proposed project consists of 1,128 new lots/homes on agricultural homesteads (subsistence agriculture) and residential homesteads (single-family and multifamily), agricultural homesteads (nonresidential supplemental agriculture), community uses including agriculture, park, and commercial areas, conservation areas, lundstrial uses, roadways, and infrastructure on 777 acres at Honokowai, Maui (Project). The Project location is less than four miles north of HHFDC's Villages of Leiali'i master planned community in Lahain, Maui, Hawai, and mauka (east) and northeast of the Lahaina Wastewater Reclamation Facility (LWWRF).

PO-21-233

DENISE ISERI-MATSUBARA EXECUTINE DIRECTOR

Department of Hawaiian Home Lands PRB HAWAII & Associates, Inc. July 27, 2021 Page 2 HHFDC and the Department of Hawaiian Home Lands (DHHL) have entered into a Memorandum of Understanding dated March 31, 2017 for the joint development of DHHL's Honokowai Well and related water facilities for DHHL and HHFDC projects at the Villages of Leialri (HHFDC-DHHL MOU). The average daily demand of potable water for the Project is estimated to be 0.901 million gallons per day (mgd). Proposed sources of water for the Project is estimated to be 0.901 million gallons per day (mgd) from DHHL's license agreement with the County of Maui, Department of Water Supply for use of DHHL lands for the Mahinahina Water Treatment Facility, (ii) 200,000 gpd to developed.

The estimated demand for irrigation water is 4,849 gallons per acre per day. The proposed source of irrigation water is R-1 water from the LWWRF. The demand for R-1 water for the agricultural lots in the Project is estimated to be 1.987 mgd. To reduce salinity, an option is to blend the R-1 water with water from Honokohau Stream. Wastewater is proposed to be accommodated by individual wastewater systems for the 1- to 2-acre agricultural lots as well as by transmission to the LWWRF. Construction of underground injection wells is not proposed. The Project is anticipated to have a positive impact on the LWWRF's existing injection wells because DHHL's use of R-1 positive impact on the LWWRF is proposed to reduce the R-1 effluent disposed of through inlection wells. Thank you for the opportunity to comment upon the Draft Environmental Assessment for the DHHL Honokowai Master Plan.

Should there be any questions or comments regarding this matter, please contact Stan S. Fujimoto, Project Manager, at 587-0541.

Sincerely,

Francis Paul Keens

Dear Mr. Keeno,

AAYMOND T. HIGA, ASLA 4ssociate Principal

On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your office's letter dated July 27, 2021 (your reference code 21:DEV/0125) regarding the

Draft Environmental Assessment (Draft EA) consultation for the DHHL Honokowai

NG DONG, LEED\* AP ARC SHIMATSU, ASLA sociate Principal

Master Plan.

MIKIKO BOUSLOG, PhD AMSAY R. M. TAUM

We acknowledge and generally agree with your summary of the Honokōwai MP. (Please be advised that in response to written comments from the State Department of Transportation, DHHL has reallocated lands conceptually reserved for the Bypass, in

favor of other DHHL and/or beneficiary uses. Traffic and engineering studies have been

updated accordingly. The Final EA shows the revised master plan, with Bypass uses removed from DHHL lands. To preserve north-south connectivity across the Master Plan

Area in the absence of the Bypass, DHHL is contemplating an additional fourth highway access, which would connect with the Häläwai Drive access.) We appreciate your

department's statement of support.

We appreciate your participation in the environmental review process. Your letter will

be reproduced in the Final Environmental Assessment.

Please feel free to forward this letter to all appropriate parties. If you have any questions,

please contact me at (808) 521-5631.

MECENEU

PBR Hawaii & Associates, Inc. 1001 Bishop Street, Suite 650 Honolulu, Hawaii 96813 Ms. Catie Cullison

Dear Ms. Cullison:

Department of Hawaiian Home Lands Honokowai Master Plan Kaanapali Moku, Lahaina District, County of Maui TMKs. (2) 4-4-001:015; (2) 4-4-002:003, 008, 009, 011, 015, 018, and 038 SUBJECT: Draft Environmental Assessment (Draft EA)

The Department of Health, Solid and Hazardous Waste Branch, Solid Waste Section received the letter dated July 2, 2021 requesting comments on the Draft EA of the proposed plan.

Our comments remain unchanged from those provided during the pre-assessment consultation. Waste disposal has occurred of portions of TMK (2) 4-4-002:018 and prior to using this land for any proposed future use, removal and proper disposal of dumped waste and necessary remedial actions of the land should be conducted.

Sincerely,

Lene Ichinotsubo

Chapter 342G, HRS, encourages the reduction of waste generation, reuse of discarded materials, and the recycling of solid waste. The project developer is highly encouraged to develop a solid waste management plan to ensure proper handling of wastes and divert recyclables from being landfilled. Ideally, the plan would seek to maximize waste diversion and minimize disposal. Such plans should include designated areas to promote the collection of reusable and recyclable materials.

# Office of Solid Waste Management

- The Office of Solid Waste Management (OSWM) administers statewide integrated solid waste management planning activities, which apply to the counties, as well as various recycling programs, e.g. the Glass Advance Disposal Fee (ADF) and Deposit Beverage Containser (DBC) Programs. Management of the DBC Program is conducted pursuant to chapter 342G, HRS, which contains compliance and enforcement provisions, and chapter 11-282, HAR, "Deposit Beverage Recycling" [http://fbealth.hawaii.gev/his/rules.ceulations\_contains.compliance of additional\_links\_10SWM is also responsible for limited enforcement and compliance of solid waste management facilities that operate primarily as certified DBC. redemption centers pursuant to chapter 342H, HRS, and chapter 11-58.1, HAR, "Solid Waste Management Control" [http://health.hawaii.gev/hhvb/solid-waste\_]. Authority for the integrated solid waste management is and chapter 11-58.1, endor the integrated solid waste management is contained and DF programs is contained in chapter 342G, HRS.
- Glass Advance Disposal Fee Program: Businesses that import glass containers into Hawaii are required to register with the Department of Health and pay a 1.5 cent per container fee. Fee revenue is distributed to the counties for the operation of glass recycling programs.
- Deposit Beverage Container Program: Business that manufacture or import deposit beverage containers into Hawaii are required to register with the Department of Heath and pay the five-cent deposit and one cent container fee on each deposit container. Deposits and fees are deposited into a special fund and are used to reimburse DBC redemption center refunds paid to consumers; and to pay handling fees to redemption/recycling companies to process and recycle collected deposit beverage containers; and to pay program administrative costs.
- The Department of Health reimburses and pays an associated handling fee for the redemption of deposit beverage containers (DBC). These transactions are conducted only with certified redemption centers. Certification requires obtaining a solid waste management permit from the SWS (which addresses environmental issues) and a certification from the DBC program (which standardizes the redemption process).
- Chapter 342G, HRS, encourages the reduction of waste generation, reuse of discarded
  materials, and the recycling of solid waste. Businesses, property managers and developers,
  and government entities are highly encouraged to develop solid waste management phans to
  ensure proper handling of wastes and divert recyclables from being landfilled. The project
  developer is highly encouraged to develop a solid waste management phan to
  per handling of wastes and divert recyclables from being landfilled. The project
  handling of wastes and divert recyclables from being landfilled. Ideally, the plan would seek to
  handling of wastes and divert recyclables from being landfilled. Ideally, the pan would seek to
  handling of wastes and divert recyclables from being landfilled.

For further information about these programs. please contact the Solid and Hazardous Waste Branch at (808) 586-4226.

maximize waste diversion and minimize disposal. Such plans should include designated areas to promote the collection of reusable and recyclable materials.

 Solid waste management plans seek to maximize waste diversion and minimize disposal. Such plans should include designated areas to promote the collection of reusable and recyclable materials.

# Underground Storage Tank Program

- The state's underground storage tank (UST) regulations. found in chapter 11-280.1, HAR [http://health.hawaii.gov/shwb/underground-storage-tanks/], include specific requirements that UST owners and operators must meet when installing. operating, and permanently closing their UST systems and addressing releases from USTs. Violations are subject to penalties under chapter 11-280.1, HAR, and chapter 342L, HRS.
- A permit is required prior to the installation and operation of a UST. Any new UST system
  that will be installed must have secondary containment with interstitial monitoring. Refer to
  subchapters 2, 3, 4, and 12 of chapter 11-280.1, HAR. The installation permit expires 1 year
  from the date of issuance. The operation permit expires 5 years from the date of issuance.
- §11-280.1-50. HAR. requires owners and operators of USTs or tank systems to notify DOH within twenty-four (24) hours and follow the procedures in§ 11-280.1-52. HAR. if any of the following occur. with specific exceptions found in the rules:
- The discovery by any person of evidence of regulated substances which may have been released at the UST site or in the surrounding area (such as the presence of free product or vapors in soils. basements. sever and utility lines. or nearby surface water);
- 2) Unusual UST system operating conditions observed or experienced (such as the erratic behavior of product dispensing equipment, the sudden loss of product from the UST, or an unexplained presence of water in the tank): or
- Monitoring results from a release detection method required under §§11-280.1-41 or 11-280.1-42 indicate a release may have occurred.
- For release response actions. responsible parties and their consultants and contractors should follow the applicable guidance in the Department of Health Hazard Evaluation Emergency (HEER) Office Technical Guidance Manual. HEER Environmental Action Level (EAL) guidance, and other Education of the DOH HEER Office website <u>[http://ena-web.doh.lawaii.gov.clase.ma.Org.HEER.0.</u> including those pertaining to Multi-Increment Sampling of soil. low flow groundwater sampling. soil vapor sampling. HEM).

- (2) 4-4-001:015, (2) 4-4-002:008, (2) 4-4-002:008, (2) 4-4-002:011, (2) 4-4-002:015, (2) 4-4-002:018, (2) 4-4-002:038 RFD.5264.6 FILE NO.: TMK NO.:

Thank you for the opportunity to review the subject document. The Commission on Water Resource Management (CNRM) is the agency responsible for administenting the State Water Coed (Code). Under the Code, all waters of the State are held in trust for the benefit of the chitzens of the State. therefore all water use is subject to legally protected water rights. CWRM strongly promotes the efficient use of Hawaii's water resources through conservation measures and appropriat resource management. For more information, please refer to the State Water Code. Chapter 174. Hawaii Revised Statutes, and Hawaii Administrative Rules, Chapters 13-167 to 13-171. These documents are available via the Internet at <u>http://dinr.hawaii.gov/cwm</u>.

Our comments related to water resources are checked off below

- We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information. ÷., ×
- We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan. c'i ×
  - We recommend coordination with the Hawaii Department of Agriculture (HDOA) to incorporate the regressification of agricultural scored land and the redistribution of agricultural resources into the State's Agricultural Nater Use and Development Plan (AVUDP). Please contact the HDOA for more ė
- We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn creating throwards. Leadership in Energy and Environmental Design (LEED) entitication. More information on LEED certification is available at http://www.usgbc.org/leed. A listing of fixtures certified by the EAP as having high water efficiency can be information. 4 ×
  - found at http://www.epa.gov/watersense.
    - We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiftration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED confidencies. More information on stormwater BMPs can be found at thtp://planning.havalii.gov/czm/initiatives/low-impact-development/ ú.  $\times$ 
      - We recommend the use of alternative water sources, wherever practicable. ×
      - We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at http://energy.hawaii.gov/green-business-program. . . .

Catie Cullison Page 2 July 20, 2021

- We recommend adopting landscape irrigation conservation best management practices endorsed by the that best industry Council of Hawaii. These practices can be found online at that hydrwwinscape.com/wo-content/uploads/2013/04/LCH\_Imgation\_Conservation\_BMPs.pdf. œ ×
  - There may be the potential for ground or surface water degradation/continuation and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality. တ် ×
- The proposed water supply source for the project is located in a designated water management area, and water Use Permit are equired princ to use of water. The Water Use Permit may be conditioned on the equirement to use dual time water supply systems for new industrial and commercial developments. 9
  - A Well Construction Permit(s) is (are) are required before the commencement of any well construction 11  $\times$
- A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for work. 12  $\times$
- There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandomed and sealed. A permit for well abandommetri must be obtained. the project. . <del>Ω</del>
  - Ground-water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment. 4
  - A Stream Channel Alteration Permit(s) is (are) required before any alteration can be made to the bed 15
    - and/or banks of a steam channel. . 9
- A Stream Diversion Works Permit(s) is (are) required before any stream diversion works is constructed or altered.
- A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water. . 11
  - The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources. 18
- Other: Planning As noted above, the Commission supports the use of alternative resources wherever pradicable to conserve natural supplies. It is the policy of the Water Commission to promote the viable and appropriate traves of reclaimed water insofar as it does not compromise beneficial uses of existing water resources. OTHER: ×

If you have any questions, please contact Neal Fujii of the Planning Branch at 587.0216 or Ryan Imata of the Regulation Branch at 587-0225.

FOR DHHL HONOKÓWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKÓWAI AHUPUA'A, SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION

KĀ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038

Dear Mr. Manuel,

On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your office's letter dated July 20, 2021 regarding the Draft Environmental Assessment (Draft EA) consultation for the DHHL Honokowai Master Plan.

We acknowledge your comments and provide the following responses.

We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information. Ι.

Plan (WUDP). The Draft WUDP generally accounts for the Master Plan Area and Moreover, DHHL has been coordinating closely with the County of Maui Department of Response: The EA (4.8.1) addresses the County's Draft Water Use and Development therefore it is anticipated that water sources are adequate for future development Water Supply, the author of the WUDP, to ensure that adequate supply will be available We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan. e.

Response: The EA (4.8.1) addresses the State Water Projects Plan (SWPP). The Master Plan Area's projected long-term potable and non-potable water demands (2026 and beyond) are included in the SWPP. DHHL will coordinate further with the State Department of Land and Natural Resources if needed, regarding the SWPP. We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at 4.

SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÖWAI MASTER PLAN, ISLAND OF MAUI **KALEO MANUEL** February 3, 2022 Page 2 of 3 http://www.usgbc.org/leed. A listing of fixtures certified by the EAP as having high water efficiency can be found at http://www.epa.gov/watersense. Response: The EA addresses water efficiency measures in Section 3.4 and 3.5.6. DHHL and users at the Master Plan Area will be encouraged to consider water conservation measures.

the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runofffrom storm events. Stormwater management BMPs may earn credit toward atWe recommend the use of best management practices (BMP) for stormwater management to minimize found becan BMPs http://planning.hawaii.gov/czm/initiatives/low-impact-development/. stormwater information on Morecertification. LEEDS.

Response: The EA addresses stormwater management in Section 3.4 and 5.2.3. The proposed action is not anticipated to increase stormwater runoff.

We recommend the use of alternative water sources, wherever practicable. 6

Response: The EA addresses alternate water sources in Section 4.8.1. Substantial irrigation demand for the Master Plan Area will be met by non-potable sources such as R-1 effluent and surface (ditch) water. We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. ×.

**Response:** The EA addresses water conservation in Section 3.4 and 3.5.6. As noted in Section 4.8.1, substantial irrigation demand for the Master Plan Area will be met by non-potable sources such as R-1 effluent and surface (ditch) water. The EA also notes that DHHL will embrace the use of native plants as a means of water conservation

that approvals for this project be conditioned upon a review by the State Department of Health and There may be the potential for ground or surface water degradation/contamination and recommend the developer's acceptance of any resulting requirements related to water quality. 9.

recommendation that approvals for the proposed action be subject to State Department of Health (DOH) review, to determine additional requirements that may be needed to ensure water quality. The DOH was consulted on the Honokōwai Master Plan, and DHHL is open to further coordination. Response: The EA addresses surface water and groundwater in Section 3.4. DHHL acknowledges your

11. A Well Construction Permit(s) is (are) are required before the commencement of any well construction work.

Response: DHHL will obtain a Well Construction Permit if required prior to any well construction.

KALEO MANUEL SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÕWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 3 of 3 12. A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project. Response: DHHL will obtain a Pump Installation Permit if required prior to developing any groundwater sources.

Other: As noted above, the Commission supports the use of alternative resources wherever practicable to conserve natural supplies. It is the policy of the Water Commission to promote the viable and appropriate reuse of reclaimed water insofar as it does not compromise beneficial uses of existing water resources.

**Response:** We acknowledge the Commission's support of the use of alternative resources wherever practicable. As the proposed action includes the use of reclaimed water (Section 4.8.1), DHHL appreciates your support for the use of reclaimed water.

We appreciate your participation in the environmental review process. Your letter will be reproduced in the Final Environmental Assessment.

Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact me at (808) 521-5631.

Sincerely,

CCULL

"An Equal Opportunity Employer/Agency"

Ms. Catie Cullison, AICP July 21, 2021 Page 2	<ol> <li>The HDOT Pre-EA consultation comments (STP 8.2809, dated December 11, 2019) and PBR's response letter (July 6, 2021) are included in the Draft EA. As requested, the</li> </ol>	Draft EA includes a TIAR, a construction phasing plan, a discussion of the HDOT Lahaina Bypass (Phase 1-D) and a master plan that shows interconnectivity with adjacent properties and limited new access points to Honoapiilani Highway. The HDOT has reviewed and accented in concent, the two onsite and Halawai Street access from	Honoaprillarii Highway, as presented in the Draft EA. The DHHL will continue to work with HDOT on intersection design. The HDOT supports the proposed interconnection with the future Pulelehua development and shared use of the proposed Pulelehua access	to Honoapiilani Highway.	2. The key assumptions and findings of the TIAR are as follows:	<ul> <li>Existing conditions are based on 2020 observations, with limitations due to pandemic traffic reductions. The TIAR assesses future traffic conditions for full-</li> </ul>	build-out of the project in 2028.	b. Six existing intersections with Honoapillani Highway were included in the 2020 and 2028 baseline analysis. The 2028 with project scenario included the two new site access with Honoapillani Highway.	<ul> <li>c. Five of the six intersections are signalized. In 2020, all six intersections operate at a desirable level of service (LOS) D or better during peak traffic hours;</li> </ul>	however, there are individual turning movements at two of the intersections that operate at LOS E or F.	d. The 2028 baseline includes the estimated trips generated by ten planned development projects in the vicinity that would be completed by 2028. The following two intersections with Honoapillani Highway would operate at LOS E or F during the AM and PM peak traffic hour in 2028:	i. Kakaalaneo Drive, LOS E (AM) and LOS F (PM)	ii. Kaanapali Parkway-Halelo Street, LOS E (AM and PM)	e. The project would generate 1,035 total AM trips and 1,552 PM trips in 2028. The two intersections identified under 2028 baseline conditions with LOS E or F degrade to LOS F with the additional project-related traffic. Three additional intersections would operate at undesirable conditions, the North Access and South Access, and Akahele Street.	f. Significant impacts related to the Honokowai traffic would occur at the following three intersections with Honoapiilani Highway in 2028 with project:	<ol> <li>Akahele Street with LOS D in the PM peak traffic hour would degrade to LOS E with the project. The TIAR includes a recommendation to improve to LOS D or better by increasing the traffic signal cycle length to 180 seconds.</li> </ol>

construction scenarios for buildout. Therefore, it would not be possible at this time to calculate the anticipated number of construction trips, vehicles, or schedules. In response to your comment, the EA has been revised not note that a Construction Management Plan will be prepared for each development phase and/or project Identify improvements within the Honoapilani Highway ROW required to support the project even if within the Master Plan Area, prior to construction permits being issued. DHHL notes that construction impacts The Final EA should discuss construction-related traffic, including the anticipated number of trips, types of vehicles, work schedule, and anticipated routes to the site. Assess potential construction impacts to are temporary and usually less impactful than the project as a whole, especially since the Master Plan Area will be built out in three or more separate phases. A Permit to Perform Work Upon State Highways and a Traffic Management Plan are required for any work within the State ROW. This is applicable to roadway improvements, as well as overhead and Response: As the proposed action is a master plan, there are currently not enough details available to determine Response: In response to your comment and consistent with the revised TIAR, the Final EA will state: Potential implementation of a TDM program for site users managed by a TDM coordinator who would organize and coordinate monitoring efforts, parking and traffic management Provision of a transportation kiosk and online portal for information on ridesharing, transit, bicycling, walking, and options for accessing the Master Plan Area other than Provision of bicycle parking adjacent to Community Use and multi-family residential areas Improvement of bicycle and pedestrian facilities to improve access to local destinations Potential implementation of micromobility devices (e.g., bicycles or scooters, e-bikes, The Proposed Action is not expected to result in any significant traffic impacts to the roadway system in the vicinity of the Master Plan Area, given the recommended mitigations. The TIAR SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL recommended several improvements which would ensure roadway efficiency. DHHL will In addition to the above, DHHL will coordinate with MPD regarding traffic, to minimize plans, and the implementation of TDM, recommendations, and modifications traffic and safety on State highways, and recommend mitigation, as needed. Response: We acknowledge and agree with your comment. HONOKÖWAI MASTER PLAN, ISLAND OF MAUI underground utility infrastructure construction. they would be constructed by other entities. demand management (TDM) including: and/or care share), as feasible potential impacts to police services. using a private vehicle and/or transit February 3, 2022 IADE BUTAY Page 5 of 7 • 10. ÷. 6. Further, we acknowledge your emailed clarification that Lahaina Bypass Phase 1-D is not funded, and construction is likely to be ten years into the future with additional environmental view possibly required. As such HDOT is not requesting at this time that DHHL set aside any lands at Honokōwai to accommodate a prospective future Bypass. Further, we acknowledge your statement that DHHL may at its discretion allocate lands previously reserved for the Bypass to other uses. DHHL agrees that any future proposal for In response to your comment, DHHL has considered the reallocation of lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. The Final EA shows the revised master plan, with Bypass uses removed. Any mention of the Bypass potentially being located on DHHL lands has been removed from the EA. To preserve north-south connectivity across the Master Plan Area in the absence of the Bypass, DHHL is contemplating an additional fourth highway access, which would connect with No significant impact to public and multimodal facilities is anticipated; however, the recommendations in the TIAR should be incorporated into the Final EA and master plan. We recommend including walking and biking path interconnectivity with adjacent planned developments to provide a less stressful Response: We acknowledge your comment regarding public and multimodal facilities. In response, Section 4.7 will more clearly state the revised TIAR's recommendations regarding public and multimodal alternative to sharing the Honoapiilani Highway Right-of-Way (ROW) with its high-speed traffic. Additional pedestrian crossing facilities are anticipated when traffic signals are installed Where feasible, additional pedestrian connections to Lower Honoapi'ilani Highway from the makai side of Honoapi 'ilani Highway will be considered to minimize walking distances and provide greater access to public uses including beaches, parks, and transit service As transit ridership may be high in the vicinity of the Master Plan Area, existing bus operations will be evaluated intermittently to determine if adequate transit capacity is Consistent with the Maui Vision Zero and HDOT design standards, DHHL will contribute DHHL acknowledges the value of separating vehicle lanes from pedestrians and bicycles, As recommended in the TIAR, DHHL will consider ways to support the provision of continuous The Proposed Action is anticipated to result in the following positive impacts to public transit SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL and this will be taken into account when designing bicycle and pedestrian facilities pedestrian and bicycle facilities, as well as various mitigation strategies for transportation its fair share to access signalization and/or controlled crosswalks if necessary. at the intersection of the Master Plan Area's north access with Honoapi'ilani. a State highway to traverse DHHL lands, would be subject to DHHL approval. available to absorb any potential increase from the Proposed Action. JADE BUTAY SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÕWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 6 of 7 continue coordination with HDOT as development progresses, and will contribute its fair share to any mitigations that are required, potentially including:

Intersection 1: Honoapi 'ilani Hwy & Akahele St: increase the cycle length to 180 seconds and optimize signal timings. The recommended modifications are forecast to improve the signal operation to a desirable LOS D in the PM peak hours with buildout of the Proposed Action.

Intersection 6: Honoapi 'lani Hwy & Ka' anapali Pkwy-Halelo St: modify the eastbound lane configuration to provide one dedicated left turn, a shared through/left turn, and two dedicated right turn lanes. The improvement is forecast to improve intersection operations to LOS C in the AM peak hour, and LOS E in the PM peak hour to less than significant levels. Intersection 7: Honoapi 'llani Hwy & the North Access: Signalizing the intersection would improve traffic operations to desirable LOS conditions. The recommended lane configuration includes:

- One through and one dedicated left turn lane on the southbound approach;
- One through and one shared through/right turn lane on the northbound approach; and
  - One dedicated left turn and one dedicated right turn lane on the westbound approach.

Intersection 8: Honoapi 'ilani Hwy & the South Access: The TLAR notes that DHHL may effect a positive impact on traffic turning onto the highway with mitigations such as implementing a merge lane consistent with HDOT standard. DHHL will consider the feasibility of this improvement.  An HDOT-HWY permit is required to transport oversized and/or overweight vehicles and loads on HDOT roadways.

Response: We acknowledge and agree with your comment.

12. No additional discharge of surface water run-off onto the Honoapiilani Highway ROW is permitted. This includes the use of the existing State drainage culvel is and channels. All additional stormwater runoff from the project site shall be managed and mitigated onsite. The Final EA shall verify and clearly state no additional flow to the State highway is anticipated.

**Response:** We acknowledge your comment regarding runoff into the Honoapi'ilani Highway right-of-way. The EA (Section 4.8.3) addresses drainage in the Master Plan Area, and any mitigations that are planned. In response to your comment, Section 4.8.3 will be revised to clearly state that no additional runoff flow to the Honoapi'ilani Highway right-of-way is anticipated.

Subject:	raut, rraup N. churt, varen RE: DOT comments on DHHL Honokowai Homestead Development

Hi Andrew,

The HDOT comment letter (STP 8.3219, July 21, 2021) attached to your email, includes Comment 6., as follows:

The master plan reserves land for the HDOT-HWY Lahaina Bypass (Phase 1-D), Launiupoko to Honokowai. As discussed in a meeting with DHHL and their traffic consultant (December 11, 2020), Phase 1-D is not designed or funded, and may be delayed to 2030. The current preliminary design would have the Lahaina Bypass terminate at the Kakalaneo Drive intersection with Honoapillani Highway. This alignment would be south of the Honokowai site. We understand DHHL would like to verify the **current preliminary design of Phase 1-D will NOT intersect or traverse the** DHHL Honokowai project area and that the DHHL Honokowai lands reserved for the by-pass can be re-allocated to other uses.

No additional information on the Phase 1-D alignment is available since the December 11, 2020 meeting and the HDOT comment letter. As noted in the meeting record, Phase 1-D funding and schedule have not been dietermined, construction is likely to be ten years into the future, and additional environmental impact review may be required (Meeting Record Item 3E.). Because Phase 1-D is not programmed, the HDOT cannot request a land "setaside" (or fair share contribution) for the bypass (Meeting Record Item 4B.) In summary, the DHHL Honokowai lands reserved for the by-pass can be re-allocated to other uses. Should the HDOT propose a Phase 1-D alignment in the future that intersects or traverses the DHHL Honokowai project area, it would be subject to DHHL approval. An alignment alternative was identified that would avoid the Honokowai site, as described in the July 2021 HDOT letter Comment 6. We are not able to provide drawings or shape files at this time due to the notional status of the alternative alignment.

Thank you,

Faith Caplan, Planner Department of Transportation-Highways Division Planning Branch 808-218-4693 (cell) ---

# Appendix B Botanical and Faunal Survey

# BOTANICAL AND FAUNAL SURVEY DEPARTMENT OF HAWAIIAN HOMELANDS SUBSISTENCE AGRICULTURAL HOMESTEAD SUBDIVISION HONOKOWAI, MAUI

Prepared By: FOREST & KIM STARR STARR ENVIRONMENTAL

Prepared For: PLANNING CONSULTANTS HAWAII, LLC & DEPARTMENT OF HAWAIIAN HOMELANDS

2018

## BOTANICAL AND FAUNAL SURVEY DEPARTMENT OF HAWAIIAN HOMELANDS SUBSISTENCE AGRICULTURAL HOMESTEAD SUBDIVISION HONOKOWAI, MAUI

# **INTRODUCTION**

The proposed Department of Hawaiian Homelands (DHHL) Subsistence Agricultural Homestead Subdivision sits on 776.5 acres in Honokowai, West Maui TMKs (4-4-01:15 & 36 and 4-4-02:03, 08, 09, 11, 15 &18). The project area is above the town of Honokowai, mauka (upslope) of the Honoapiilani Highway and south of the Kapalua Airport. The goal of the project is to develop a subsistence subdivision. This study was initiated to gather information about the flora and fauna of the project area.

### SITE DESCRIPTION

The project area is situated on land previously cultivated in pineapple. Most of the land is moderately sloped and thickly vegetated with grasses, shrubs, and small trees. Part of the project area includes a water treatment facility. There is also a large paved area and a baseyard with a few buildings. Honokowai Valley runs through the project area. The project elevation ranges from 15 to 700 feet above sea level. Annual rainfall averages 20-44 inches. Annual air temperature averages 75 degrees Fahrenheit.

Project area, Honokowai, Maui.

# **BIOLOGICAL HISTORY**

The original vegetation on the site was likely a diverse dryland to mesic native forest. After the arrival of humans, a series of forces including fire, agriculture, and introduced plants, animals, and diseases transformed the site to predominantly non-native vegetation. The most recent major use of the land was pineapple cultivation. Today the bulk of the site is covered with non-native plants revegetating the abandoned pineapple fields.

# SURVEY OBJECTIVES

The objectives of the survey were to:

- Document what plant and animal species occur on the site or may likely occur in the existing habitat.
- Document the status and abundance of each species.
- Determine the presence or likely occurrence of any native flora and fauna, particularly any that are federally listed as threatened or endangered. If such occur, identify what features of the habitat may be essential for these species.

Project area, Honokowai, West Maui.

# **BOTANICAL SURVEY**

# **SURVEY METHODS**

A walk-through botanical survey method was used following routes to ensure coverage of different habitat types. Notes were made on plant species, distribution and abundance. Extra emphasis was placed on areas with potentially high diversity and areas where management was most feasible and likely. The project area was surveyed in September and October of 2018. Though it was the end of summer, above average dry season rainfall resulted in green lush vegetation during the survey.

Taking notes on vegetation, Honokowai.

# **DESCRIPTION OF VEGETATION**

The bulk of the project area is covered with non-native vegetation colonizing the abandoned pineapple fields. Part of the project area has been planted in coffee (*Coffea arabica*) and is actively being farmed. The rest of the project area is mostly fallow.

Most of the project area is grassland of varying heights. The dominant grasses are Guinea grass (*Megathyrsus maximus*), sour grass (*Digitaria insularis*), and buffel grass (*Cenchrus ciliaris*).

Common herbs in the area include hairy horseweed (*Conyza bonariensis*), saltbush (*Atriplex suberecta*), partridge pea (*Chamaecrista nictitans*), smooth leaved rattlepod (*Crotalaria pallida*), and scarlet boerhavia (*Boerhavia coccinea*).

Shrubs in the area include the non-native haole koa (*Leucaena leucocephala*), which can form tall thickets, especially in and near gulches. Also present are dog tail (*Buddleia asiatica*), sourbush (*Pluchea carolinensis*), and tree tobacco (*Nicotiana glauca*).

Trees are starting to overtake the grasses and shrubs in parts of the project area. These trees are mostly non-native and include Christmasberry (*Schinus terebinthifolius*), silky oak (*Grevillea robusta*), Manila tamarind (*Pithecellobium dulce*), Chinaberry (*Melia azedarach*), Java plum (*Syzygium cumini*), lemon-scented gum (*Corymbia citriodora*) and kiawe (*Prosopis pallida*).

Non-native vines include glycine (*Neonotonia wightii*), little bell (*Ipomoea triloba*), bitter melon (*Momordica charantia*), moon flower (*Ipomoea alba*), and cow pea (*Macroptilium atropurpureum*).

Native plants encountered were the tree wiliwili (*Erythrina sandwicensis*), the shrubs aalii (*Dodonaea viscosa*), uhaloa (*Waltheria indica*), popolo (*Solanum americanum*), and ilima (*Sida fallax*), the herb alaala wai nui (*Peperomia blanda*), the fern iwaiwa (*Doryopteris decipiens*), and the vines koali awa (*Ipomoea indica*) and pau o Hiiaka (*Jacquemontia sandwicensis*).

Native ilima (Sida fallax) shrub in abandoned pineapple field, Honokowai.

The bulk of the project area is a non-native grassland revegetating abandoned pineapple fields. The dominant grasses are Guinea grass (*Megathyrsus maximus*) and sour grass (*Digitaria insularis*).

In some areas, grasses area being overtaken by shrubs and trees, predominantly non-native haole koa (*Leucaena leucocephala*), Christmasberry (*Schinus terebinthifolius*), Manila tamarind (*Pithecellobium dulce*), silky oak (*Grevillea robusta*), and lemon-scented gum (*Corymbia citriodora*).

Areas with taller vegetation are usually dominated by haole koa (*Leucaena leucocephala*) and Guinea grass (*Megathyrsus maximus*). Though slower to take hold, lemon-scented gum (*Corymbia citriodora*) and other trees such as silky oak (*Grevillea robusta*) are also spreading into the abandoned fields.

Portions of the project area abutting the coffee plantation are planted in coffee (Coffee arabica).

A few scattered native aalii (*Dodonaea viscosa*) bushes have colonized the abandoned fields and persist in nearby gulches.

The native koali awa (Ipomoea indica) vine is also present in some of the abandoned fields.

Vegetation in the gulches is predominantly non-native, dominated by haole koa (*Leucaena leucocephala*), Manila tamarind (*Pithecellobium dulce*) and Guinea grass (*Megathyrsus maximus*).

There are small pockets of remnant natives plants in the steepest areas, such as alaala wai nui (*Peperomia blanda*) and iwaiwa (*Doryopteris decipiens*) on this rock band in Honokowai Valley. Wiliwili (*Erythrina sandwicensis*) and aalii (*Dodonaea viscosa*) are also present in the gulches.

Large parking lot in project area. Uhaloa (*Waltheria indica*) and haole koa (*Leucaena leucocephala*) are colonizing the cracks in the tarmac. There is some tree tobacco (*Nicotiana glauca*) on the margin.

Baseyard in project area. Vegetation is dominated by haole koa and Guinea grass. There are also a dozen or so tree tobacco (*Nicotiana glauca*) plants in various life stages around this parking area.

## DISCUSSION AND RECOMMENDATIONS

The bulk of the project area has been heavily impacted by previous human disturbances and is currently dominated by hardy non-native plants. The native plant species found on the site are all relatively common in Hawaii and of no special conservation concern. The proposed project is not expected to have a significant negative impact on the botanical resources in this part of Maui.

However, there are non-native tree tobacco (*Nicotiana glauca*) plants on the property. Though considered invasive, this non-native plant is of potential conservation concern, given that it can be a host plant for the endangered Blackburn's sphinx moth (*Manduca blackburni*). This is discussed in more detail in the insect section.

If folks are looking for a restoration component to the project, the gulches seem the most promising, with small remnant patches of native plants still persisting that could be protected and expanded. Many of these native plants provide lei material and other resources for humans and native insects. Additionally, many of the native plant species found in the area could be used in landscaping, as they are well adapted to the area.

Aalii (Dodonaea viscosa), one of the most abundant native plants on the site.

## PLANT SPECIES LIST

Following is a checklist of vascular plant species encountered during the survey.

- Bio-geographical status / nativity:
  - *Endemic* = Native to Hawaii; not naturally occurring anywhere else in the world.
  - *Indigenous* = Native to Hawaii and also to one or more other geographic area(s).
  - *Non-native* = Brought to Hawaii by humans.
- Abundance of each species within each vegetation type in the project area:
  - *Dominant* = Forming a major part of the vegetation within the project area.
  - *Common* = Widely scattered throughout the area or locally abundant within a portion of it.
  - *Occasional* = Scattered sparsely throughout the area or occurring in a few small patches.
  - *Rare* = Only a few isolated individuals within the project area.

Family	Scientific Name	Common Name	Nativity	Abundance
Malvaceae	Abutilon grandifolium	Hairy abutilon	Non-native	Rare
Fabaceae	Acacia confusa	Formosa koa	Non-native	Occasional
Asteraceae	Acanthospermum australe	Spiny-bur	Non-native	Occasional
Euphorbiaceae	Aleurites moluccana	Kukui Nut Tree	Non-native	Rare
Amaranthaceae	Alternanthera pungens	Khaki weed	Non-native	Occasional
Amaranthaceae	Amaranthus spinosus	Spiny amaranth	Non-native	Rare
Amaranthaceae	Amaranthus viridis	Slender amaranth	Non-native	Occasional
Polygonaceae	Antigonon leptopus	Mexican creeper	Non-native	Rare
Asclepiadaceae	Asclepias physocarpa	Balloon plant	Non-native	Occasional
Amaranthaceae	Atriplex suberecta	Saltbush	Non-native	Occasional
Asteraceae	Bidens pilosa	Beggars tick	Non-native	Occasional
Nyctaginaceae	Boerhavia coccinea	Scarlet boerhavia	Non-native	Common
Scrophulariaceae	Buddleja asiatica	Dog tail	Non-native	Occasional
Asclepiadaceae	Calotropis procera	Small crown flower	Non-native	Occasional
Fabaceae	Canavalia cathartica	Maunaloa	Non-native	Occasional
Solanaceae	Capsicum annuum	Chili pepper	Non-native	Rare
Casuarinaceae	Casuarina equisetifolia	Ironwood	Non-native	Occasional
Poaceae	Cenchrus ciliaris	Buffel grass	Non-native	Occasional
Fabaceae	Chamaecrista nictitans	Partridge pea	Non-native	Occasional
Poaceae	Chloris barbata	Finger grass	Non-native	Occasional
Verbenaceae	Citharexylum spinosum	Fiddlewood	Non-native	Rare
Rubiaceae	Coffea arabica	Coffee	Non-native	Occasional
Asteraceae	Conyza bonariensis	Hairy horseweed	Non-native	Occasional
Myrtaceae	Corymbia citriodora	Lemon-scented gum	Non-native	Common
Fabaceae	Crotalaria assamica	Single leaf crotalaria	Non-native	Rare
Fabaceae	Crotalaria pallida	Smooth rattle pod	Non-native	Occasional
Poaceae	Cynodon dactylon	Bermuda grass	Non-native	Rare
Fabaceae	Desmanthus pernambucanus	Slender mimosa	Non-native	Occasional
Poaceae	Digitaria insularis	Sour grass	Non-native	Common

Family	Scientific Name	Common Name	Nativity	Abundance
Sapindaceae	Dodonaea viscosa	Aalii	Indigenous	Occasional

Asteraceae	Xanthium strumarium var. canadense	Cocklebur	Non-native	Occasional

Native Pau o Hiiaka (Jacquemontia sandwicensis) vine, Honokowai.

## FAUNAL SURVEY

## **SURVEY METHODS**

A walk-through survey method was conducted in conjunction with the botanical survey. Field observations were made with the aid of binoculars and by listening to vocalizations. Notes were made on species, abundance, activities and location as well as observations of trails, tracks, scat, signs of feeding, and potential habitat. A sweep net was used to get closer looks at cryptic and fast insects.

Looking and listening for wildlife, Honokowai.

## BATS

Bats can be found virtually anywhere on Maui. Hawaiian Hoary Bats roost in tall trees in sheltered areas. The bulk of the project area has low growing vegetation, as the area was recently a pineapple plantation. However, as time progresses the shrubs and trees colonizing the abandoned pineapple fields will get taller. Additionally, some portions of the project area extend into gulches where there are currently large mature trees.

Hawaiian Hoary Bats give birth to and raise their young in the summer. Avoiding cutting trees greater than 15 ft. tall between June 1 and September 15 during the bat pupping season will help minimize potential impact to young bats that have not yet learned to fly.

Hawaiian Hoary Bat in Olinda, Maui.

## **NON-NATIVE MAMMALS**

The only signs of mammals observed was some old cat (*Felis domesticus*) scat on the side of one of the main dirt roads.

Other mammals likely to utilize this property, but which were not observed or heard include dogs (*Canis familiaris*), wild pigs (*Sus scrofa*), axis deer (*Axis axis*), rats (*Rattus spp.*), mice (*Mus domesticus*), and mongoose (*Herpestes javanicus*).

## BIRDS

The bulk of the birds observed on the site are common non-native species.

The exception are a few dozen shorebirds that were foraging and loafing in and near the water treatment facility. Most abundant was Pacific Golden-Plover or Kolea (*Pluvialis fulva*). There was also one Ruddy Turnstone or Akekeke (*Arenaria interpres*), and a Wandering Tattler or Ulili (*Tringa incana*).

Some of the more prevalent non-native birds on the site were Scaly-breasted Munia (*Lonchura punctulata*) and Chestnut Munia (*Lonchura atricapilla*), that regularly flew by in flocks up to half a dozen birds. Also conspicuous were Zebra Doves (*Geopelia striata*) and Spotted Doves (*Spilopelia chinensis*). Cattle Egrets (*Bubulcus ibis*) were flying overhead near the treatment facility. Gray Francolins (*Francolinus francolinus*) were regularly calling from the brush.

Though not observed during surveys, the Hawaiian Short-eared Owl or Pueo (*Asio flammeus sandwichensis*) and Hawaiian Goose or Nene (*Branta sandvicensis*) could possibly utilize parts of the shorter grassland areas for foraging and nesting. If Nene or Pueo breeding is found to be occurring on the site, the Department of Land and Natural Resources (DLNR) should be contacted to determine appropriate actions.

Hawaiian Petrels or Uau (*Pterodroma sandwichensis*) and other seabirds raise their young in upland sites of West Maui. After feeding at sea during the day, the birds fly up to the mountain burrows at night, using the moon, stars, and land features for navigation. Bright lights can disorient the birds. Using downward facing lights will help minimize distractions to these night-flying birds.

Kolea or Pacific Golden-Plovers (*Pluvialis fulva*) loafing in catchment basin at treatment plant.

## **BIRD SPECIES LIST**

Following is a checklist of the bird species encountered during the survey.

- Bio-geographical status / nativity:
  - *Endemic* = Native to Hawaii; not naturally occurring anywhere else in the world.
  - *Indigenous* = Native to Hawaii and also to one or more other geographic area(s).
  - *Non-native* = Brought to Hawaii intentionally or accidentally by humans.
  - *Migratory* = Spending a portion of the year in Hawaii and a portion elsewhere.
- Abundance of each species within the project area:
  - *Abundant* = Many flocks or individuals seen throughout area at all times of day.
  - *Common* = A few flocks or well scattered individuals throughout the area.
  - *Occasional* = Only one flock or several individuals seen within the project area.
  - $\circ$  *Rare* = only one or two seen within the project area.

Common name	Scientific name	Nativity	Abundance
Black Francolin	Francolinus francolinus	Non-native	Occasional
Cattle Egret	Bubulcus ibis	Non-native	Rare
Chestnut Munia	Lonchura atricapilla	Non-native	Common
Chinese Hwamei	Garrulax canorus	Non-native	Rare
Common Myna	Acridotheres tristis	Non-native	Occasional
Gray Francolin	Francolinus pondicerianus	Non-native	Common
House sparrow	Passer domesticus	Non-native	Occasional
Japanese White-eye	Zosterops japonicus	Non-native	Occasional
Java sparrow	Lonchura oryzivora	Non-native	Rare
Pacific Golden-Plover	Pluvialis fulva	Migratory	Occasional
Red-crested Cardinal	Paroaria coronata	Non-native	Occasional
Ruddy Turnstone	Arenaria interpres	Migratory	Rare
Scaly-breasted Munia	Lonchura punctulata	Non-native	Common
Spotted Dove	Streptopelia chinensis	Non-native	Common
Wandering Tattler	Tringa incana	Migratory	Rare
Zebra Dove	Geopelia striata	Non-native	Occasional

Zebra Dove in grass, Honokowai.

## **INSECTS**

A complete inventory of the insects was beyond the scope of this survey. Conspicuous insects were noted and special effort was made to look for native insects of conservation concern. More intensive surveys would undoubtedly turn up many more cryptic native species, though it is unlikely any would be of conservation concern.

Some of the more conspicuous insects on the site were butterflies, including monarch butterfly (*Danaus plexippus*), large orange sulphur (*Phoebis agarithe*), bean butterfly (*Lampides boeticus*), and lesser grass blue butterfly (*Zizina otis*). All of these are non-native. There is the chance the native green blue butterfly (*Udara blackburni*) could utilize the aalii on the site for breeding, but it was not observed.

There were also a number of dragonfly-like insects, especially in areas close to ditches and reservoirs. Most were non-native including the familiar bluet (*Enallagma civile*), roseate skimmer (*Orthemis ferruginea*), and black saddlebags skimmer (*Tramea lacerata*). The native pinao or green darner dragonfly (*Anax* sp.) was also observed. The damselflies and dragonflies encountered on the site are all common in Hawaii.

Native fancy-cased moths (*Hyposmocoma* sp.) are present on large stones and rock bands. These cryptic native moths are able to survive in some of the most disturbed landscapes in Hawaii. They are abundant and not of conservation concern.

Sweeping vegetation for insects, Honokowai.

Familiar bluet (*Enallagma civile*), one of the non-native damselflies in the project area.

Native fancy-cased moths (Hyposmocoma sp.) are present on this and other large rocks on the site.

Camouflaged native moth (Hyposmocoma sp.) larva/pupa nestled in crack in stone at Honokowai.

## Blackburn's Sphinx Moth

Searching tree tobacco (Nicotiana glauca) for Blackburn's sphinx moth (Manduca blackburni).

A few dozen tree tobacco (*Nicotiana glauca*) plants were encountered in the project area. Though non-native and often considered a weed, tree tobacco can be a host plant for the larvae of the native and endangered Blackburn's sphinx moth (*Manduca blackburni*).

The tree tobacco plants were searched for evidence of the endangered Blackburn's sphinx moth. There was a bit of insect chewing on some leaves. However, no frass, eggs, larvae, or adults of the Blackburn's sphinx moth were observed.

That said, even though the vegetation was green from above-average summer rainfall, September/October is not the optimal time to search for Blackburn's sphinx moth eggs and larvae, given that most moths are usually pupating in the soil this time of year.

There were two general areas of tree tobacco plants, both near roads in the lowest portion of the project area. In the north part of the project, the plants were where the main dirt road heads uphill. In the south part of the project, the plants were around the gravel parking lot at the baseyard and the nearby paved parking lot up the hill.

If Blackburn's sphinx moths are found on tree tobacco plants before construction, the United States Fish and Wildlife Service (USFWS) should be contacted.

Locations of tree tobacco (Nicotiana glauca) in the project area.

Blackburn's sphinx moth on tree tobacco, Kihei, Maui.

## **INSECT SPECIES LIST**

Following is a checklist of the insects encountered during the survey.

- Bio-geographical status / nativity:
  - *Endemic* = Native to Hawaii; not naturally occurring anywhere else in the world.
  - *Indigenous* = Native to Hawaii and also to one or more other geographic area(s).
  - *Non-native* = Brought to Hawaii intentionally or accidentally by humans.

Order	Family	Scientific Name	Common Name	Nativity
Coleoptera	Coccinellidae	Coccinella septempunctata	Seven-spot ladybird	Non-Native
Coleoptera	Curculionidae	Naupactus godmani	Fuller rose weevil	Non-Native
Coleoptera	Scarabaeidae	Adoretus sinicus	Chinese rose beetle	Non-Native
Hymenoptera	Apidae	Apis mellifera	Honey bee	Non-Native
Hymenoptera	Apidae	Xylocopa sonorina	Sonoran carpenter bee	Non-Native
Hymenoptera	Evaniidae	Evania appendigaster	Ensign wasp	Non-Native
Hymenoptera	Syrphidae	?	Syrphid fly	Non-Native
Lepidoptera	Cosmopterigidae	Hyposmocoma sp.	Fancy-cased moths	Endemic
Lepidoptera	Lycaenidae	Lampides boeticus	Bean butterfly	Non-Native
Lepidoptera	Lycaenidae	Zizina otis	Lesser grass blue	Non-Native
Lepidoptera	Noctuidae	Achaea janata	Castor bean defoliator	Non-Native
Lepidoptera	Nymphalidae	Danaus plexippus	Monarch butterfly	Non-Native
Lepidoptera	Pieridae	Abaeis nicippe	Sleepy orange butterfly	Non-Native
Lepidoptera	Pieridae	Phoebis agarithe	Large orange sulphur butterfly	Non-Native
Lepidoptera	Pieridae	Pieris rapae	Cabbage white butterfly	Non-Native
Lepidoptera	Tineidae	?	Clothes moths	Non-Native
Odonata	Aeshnidae	Anax sp.	Darner	Native
Odonata	Coenagrionidae	Enallagma civile	Familiar bluet	Non-Native
Odonata	Libellulidae	Orthemis ferruginea	Roseate skimmer	Non-Native
Odonata	Libellulidae	Tramea lacerata	Black saddlebags skimmer	Non-Native

Familiar bluet (Enallagma civile), Honokowai.

## **DISCUSSION & RECOMMENDATIONS**

Most of the animals observed on the site are non-native and of no special conservation concern. By contacting DLNR if Nene or Pueo are thought to be nesting on the site, not cutting large trees during summer months while bats are pupping, using downward facing lights to not disorient night-flying seabirds, and contacting USFWS if Blackburn's sphinx moths are found on tree tobacco, the proposed project is not expected to have a significant negative impact on the faunal resources in this part of Maui.

## **1. INTRODUCTION**

At the request of PBR Hawai'i & Associates, Inc. (PBR), on behalf of the State of Hawai'i Department of Hawaiian Home Lands (DHHL), ASM Affiliates (ASM) conducted an archaeological reconnaissance survey and literature review for the planned DHHL Honokōwai Community in Honokōwai Ahupua'a, Lahaina District, Island of Maui (Figure 1). The study area for the proposed DHHL Honokōwai community consists of eight parcels of land totaling approximately 777 acres (Tax Map Keys (TMKs): (2) 4-4-001:015, (2) 4-4-002:003, 008, 009, 011, 015, 018, and 038) located *mauka* of Honoapi'ilani Highway in Honokōwai Ahupua'a, Lahaina District, Island of Maui (Figure 2). The parcels, five of which are owned by DHHL and three of which are owned by the State of Hawai'i, range in size from 0.56 acres to 510.65 acres (Table 1). Honokōwai Gulch—a deeply eroded, dry-stream valley containing a number of privately-owned parcels—divides the study area lengthwise into two non-contiguous sections, with four of the parcels (totaling approximately 527 acres) situated on lands to the north of the gulch, and the other four parcels (totaling approximately 250 acres) situated on lands to the south of the gulch. Both sections of the study area are accessed at the intersection of Honoapi'ilani Highway and Lower Honoapi'ilani Road by way of the Lahaina Wastewater Reclamation Facility. No vehicular access is currently possible between the northern and southern sections of the study area, except by way of an old cane haul road that parallels Honoapi'ilani Highway along the eastern edges of the reclamation facility.

\* DHHL will resolve any land ownership issues prior to actions on lands owned by the "State of Hawai'i"; \*\*Location relative to Honokōwai Gulch

DHHL is currently conducting an Environmental Assessment (EA) for a community master plan of the Trust lands at Honokōwai, and is engaging its beneficiaries in a master planning process to determine appropriate land uses. The final master plan is anticipated to include new homesteads and agricultural lots, which could be supported by light industrial and commercial uses, park and open space, and community uses such as a possible farmers market, farm support center, church, school facility, and/or health care center. A portion of the project area will also be set aside, as needed, to accommodate County of Maui infrastructure. The proposed use of State lands and funds for this project triggers an environmental requirement for the preparation of an EA in compliance with Hawai'i Revised Statutes (HRS), Chapter 343, which PBR will be preparing on behalf of DHHL (pursuant to Chapter 343 and Hawai'i Administrative Rules (HAR), Title 11, Chapter 200.1). A concept plan and supporting technical studies for the desired land uses is available for review in the Environmental Assessment for the DHHL Honokōwai Master Plan. A preliminary plan is presented below as Figure 3.

This archaeological reconnaissance survey and literature review report was conducted in support of the HRS Chapter 343 EA being prepared by PBR, and was undertaken, in accordance with HAR 13§13-275-5, to determine whether historic properties are present within the proposed DHHL Honokōwai Community. This report (intended as a planning document for the DHHL Honokōwai Community) contains background information describing the location and environment of the study area, culture-historical context for Honokōwai Ahupua'a, a summary of previous archaeological studies conducted in the vicinity of the proposed project, an explanation of the reconnaissance survey field methods, descriptions of the historic properties encountered during the survey, and recommendations regarding the treatment and inventory of those properties pursuant to HAR 13§13-275 and 13§13-276.

#### **STUDY AREA DESCRIPTION**

The study area for the archaeological reconnaissance survey and literature review for the planned DHHL Honokōwai Community is situated 0.4 to 3.5 kilometers inland of the coast on the lower *kula<sup>1</sup>* slopes of the West Maui Mountains, at elevations ranging from 15 to 220 meters (50 to 720 feet) above sea level (see Figures 1 and 2). The *kula* lands within the current study area have a consistent western slope aspect, with an average slope of 7 percent and a maximum slope of 15 percent. These lands are dissected at regular intervals by shallow to deeply eroded gulches that course from east to west, from the mountain slopes to the ocean. Three named gulches cross the *kula* lands of the current study area. Honokōwai Gulch is the primary drainage basin for Honokōwai Ahupua'a and divides the *kula* lands into northern and southern sections. Honokōwai Gulch is not part of the DHHL Master Plan Area. Onepeha and Kanauau feed into Honokōwai Gulch from the north and south respectively, and are part of the DHHL Master Plan Area (Figure 4). Honokōwai, by far the largest of these three gulches, has an average width of 150 meters and a depth of more than 40 meters where it crosses through the study area (Figure 5). This gulch, which had a perennial stream flowing through it until the late 1800s or early 1900s when the water was diverted for sugarcane irrigation purposes, has steep sides with slopes of 60 percent or more. The other two study area gulches are both considerably smaller than Honokōwai Gulch with intermittent stream channels and less steeply sloped sides, although Kanauau Gulch is more deeply eroded than Onepeha Gulch, with a wider and deeper stream valley (Figure 6).

Rainfall within the current study area varies by season and elevation, with most of the precipitation occurring during the winter months of November to March, and more rain falling at higher elevations than at lower elevations. The mean annual rainfall within study area ranges from 570 millimeters (22.5 inches) at lower elevations to 1,030 millimeters (40.6 inches) at higher elevations (Giambelluca et al. 2013). The climate in the vicinity of the study area is relatively warm throughout the year, but is also somewhat dependent upon season and elevation, with hotter weather prevailing during the summer months of April to October, and temperatures cooling as elevation increases. The mean annual temperature ranges from 23.7°C (74.6°F) at the lower elevations to 22.3°C (72°F) at the upper elevations (Giambelluca et al. 2014).

Geologically, the study area is situated on the western flank of the West Maui Volcano on lava flows of the Wailuku Volcanics series (labeled QTwl in Figure 7) that occurred 1.3 to 2 million years before present (Sherrod et al. 2007). These thin  $p\bar{a}hoehoe$  and 'a' $\bar{a}$  lava flows, comprised of heavily eroded and weathered tholeiitic basalt, comprise roughly 98% of the study area lands, while the remaining 2% of the lands, at the outlet of Honokōwai Gulch, are comprised of deposits of alluvium (labeled Qa in Figure 7) that consist of unconsolidated deposits of silt, sand, and gravel that were carried to the coast through the stream valley (Sherrod et al. 2007).

Soils that have formed within the study area's *kula* lands on the Wailuku Volcanics lava flows (Figure 8) consist primarily of Lahaina silty clay (LaB and LaC) with smaller pockets of Kahana silty clay (KbB and KbC) and Molokai silty clay loam (MuA, MuB, and MuC) also present (Soil Survey Staff 2019). The steep-sided gulch lands are classified variously as rough broken land (rRR), rough broken and stony land (rRS), and rock land (rRK). The alluvium deposits at the outlet of Honokōwai Gulch are classified as Ewa silty clay loam (EaA). The well-drained silty clay and silty clay loam soils that form the *kula* lands within the current study area are classified by the U.S. Department of Agriculture-Natural Resources Conservation Service (USDA-NRCS) as prime farmland if irrigated (Soil Survey Staff 2019).

The *kula* lands within the current study area have been transformed into an entirely built environment by more than a century of plantation use for the commercial cultivation of first sugarcane and then pineapple. The outlines of the former pineapple fields can still be seen in recent aerial images (see Figure 4), and their boundaries are marked on the ground by bulldozed berms of soil that cross-cut the *kula* slopes. These fields, which once covered nearly all of the study area's *kula* lands, were last harvested in ca. 2007 and then left fallow (Figure 9). Today, the once intensively cultivated *kula* lands are choked with weeds and littered with scraps of old weed-matting and drip irrigation tubing, with only a few stunted pineapples still growing (Figure 10). The former fields along the southern boundary of the study area (TMKs: (2) 4-4-002:003 and 008) to the south of Kanaunau Gulch, have been re-planted with coffee by Kā'anapali Coffee Farms and remain in agricultural use (see Figure 4). Only the more *mauka* area of the coffee orchard (on TMK: (2) 4-4-002:003) is overgrown with weeds and vines, and does not appear to have been cared for in some time (Figure 12).

<sup>&</sup>lt;sup>1</sup> Kula, used here to describe the gently sloping terrain between the immediate shoreline zone and the steeper mountain slopes, is a Hawaiian term literally meaning plain, field, open country, or pasture. Traditionally, this term was used to distinguish drier, *kula* lands used for dryland agriculture from wetter, taro lands used for irrigated agriculture (Maly and Maly 2007; Pukui and Elbert 1986).

The former pineapple irrigation system, consisting of buried PVC pipes, is also evident across the study area *kula* lands at locations where those pipes surface (Figure 13). This more modern irrigation system replaced an older system of flumes, ditches, and metal pipes established by the Pioneer Mill Company during the early twentieth century when the study area was planted in sugarcane. Much of the older sugarcane irrigation system, was abandoned and destroyed after the *kula* lands of Honokōwai were converted to pineapple cultivation during the latter 20<sup>th</sup> century, but remnants of this older field infrastructure can still be seen deposited in push piles scattered across the *kula* lands (Figure 14), and also along the gulch edges where abandoned sections of metal pipe (Figure 15) and other materials, including numerous vehicles and boulders cleared from the fields, were pushed by bulldozers during more recent field clearing activities (Figure 16). The cane fields within the Honokōwai section of the plantation were formerly irrigated by water carried through the Honokōhau Ditch, which crosses the *ahupua* 'a just *mauka* of the boundary of the current study area (see Figure 4). Two reservoirs located *makai* of the ditch alignment (one on either side of Honokōwai Gulch; Figures 17 and 18) are excluded from the current study area, as is a fourth reservoir ("Honokōwai Reservoir") located further *makai*, near where Onepeha Gulch meets Honokōwai Gulch (Figure 21) are both located on the DHHL-owned lands (on TMKs: (2) 4-4-002:015 and 018, respectively), and are included within the current study area.

Figure 13. Irrigation pipe within the former pineapple fields north of Honokowai Gulch, view to the east.

Vehicular access to the study area *kula* lands is made possible by a network of old 4-wheel drive plantation roads that have not changed much since the mid-20<sup>th</sup> century. The gravel road leading to the Māhinahina Surface Water Treatment Plant by way of the aforementioned water tank, is the most well maintained access within the study area. This primary access route to the northern portion of the study area, which begins at a bridge crossing a concrete flood channel at the outlet of Honokōwai Gulch (along the northern edge of the Lahaina Wastewater Reclamation Facility; Figures 22 and 23), follows an old cane-haul road north along the *makai* boundary of the study area (parallel to Honoapi'ilani Highway) for 0.8 kilometers before turning east (Figure 24) and extending straight up slope for 2.8 kilometers to the *mauka* boundary of the study area. A number of secondary access roads, including a road following the northern edge of Honokōwai Gulch, a road accessing Honokōwai Reservoir, a road paralleling Honokōhau Ditch, a utility pole maintenance road along the northern boundary of the study area, and several connector roads along the boundaries of the former pineapple fields are accessible from this road, but these roads are not as well maintained, and in some areas are severely eroded and/or overgrown with thick vegetation (Figure 25).

Figure 24. Primary access road to the Māhinahina Surface Water Treatment Plant, view to the east.

Figure 25. Secondary access road along the northern edge of Honokōwai Gulch, view to the west.

The southern portion of the study area is less accessible by vehicle. The old plantation roads that used to cross Honokōwai Gulch, connecting the *kula* lands on either side, have been blocked with boulders and are no longer drivable. The *makai* most *kula* lands south of Honokōwai Gulch (on TMK: (2) 4-4-002:003) can be accessed from the old cane-haul road that parallels Honoapi'ilani Highway inland of the Lahaina Wastewater Reclamation Facility by a gated driveway (Figure 26) that leads east for 0.15 kilometers to a parking lot (Figure 27). Alignments of two old plantation field roads extend *mauka* from the parking lot, but are cut off roughly 0.3 meters inland of the cane-haul road by a recently excavated ditch, seemingly created to divert run-off away from the parking lot, and are no longer drivable. The study area lands to the northwest of the parking lot have been subject to mass excavation, and are part of a deep retention basin at the *makai* end of Honokōwai Gulch that helps prevent coastal flooding during times of heavy rain. Several modern, metal-sided, shed structures are present adjacent to the cane-haul road *makai* of the parking lot in the southwestern corner of TMK: (2) 4-4-002:003 (Figure 28). The majority of the southern portion of the study area, *mauka* of the parking lot, conists of former plantation lands crossed by a network of old roads, with a portion of that area (on TMK: (2) 4-4-002:008) currently planted in coffee. TMKs: (2) 4-4-002:003 and 008 encompass the southern slope of Honokōwai Gulch and actually extend to the southern edge of the Honokōwai Stream in a couple of areas (Figure 29).

Vegetation cover within the study area varies by elevation (rainfall), and is largely reflective of the past use of these lands for plantation agriculture. Most of the current vegetation regime on the kula slopes is less than 15 years old, and has become established since the last pineapples were harvested from the study area in ca. 2007. The lower (drier) kula slopes generally support a growth of low buffelgrass (Cenchrus ciliaris). Scattered koa haole (Leucaena leucocephala), a'ali'i (Dodonaea viscosa), and 'uhaloa (Waltheria americana) are also present. With increasing elevation, the vegetation becomes thicker. Within the upper (wetter) kula lands the vegetation cover transitions to tall Guinea grass (Megathyrsus maximus) mixed with koa haole, Christmas-berry (Schinus terebinthifolia), silky oak (Grevillea robusta), java plum (Syzygium cumini), and other weeds. At a few locations along the upper gulch edges eucalyptus and pine trees are also growing, representing the remnants of former windbreaks planted by the plantation (Figure 30). The smaller Onepeha and Kanaunau gulches basically follow a similar vegetation pattern to the adjacent kula lands, although the koa haole is generally taller (older) and scattered kiawe (Prosopis pallida) are also present (especially in the slightly larger Kanaunau Gulch). The taller vegetation cover in these gulches helps to shade out the understory paints and keeps the ground cover low, making them relatively easy to walk through. Vegetation within the larger Honokowai Gulch consists almost entirely of tall trees, including java plum, silky oak, kiawe, mango (Mangifera indica) with very little undergrowth at all (see Figure 29). A number of tall wiliwili (Erythrina sandwicensis) trees were also noted growing along the southern edge of Honokōwai Gulch within TMK: (2) 4-4-002:008 during the current fieldwork (Figure 31). The effects of vegetation cover on the survey fieldwork will be discussed further in the findings section of this report.

# 2. BACKGROUND

To generate a set of expectations regarding the nature of archaeological resources that might be encountered within the current study area, and to establish an environment within to assess the nature and extent of traditional land use, a general cultural-historical context for Honokōwai Ahupua'a is presented followed by a discussion of relevant prior archaeological and historical studies conducted in the vicinity of the study area. This literature review is based on original research conducted by ASM at various online repositories, the State Historic Preservation Division offices in Hilo, Maui, and Kapolei, Na 'Aikane O Maui Cultural Center in Lahaina, Bishop Museum Archives, the Hawai'i Sugar Planters' Association Plantation Archives, the Hawaiian Mission Houses Library and Archives, Hale Pa'i Printing Museum, the Hawai'i State Archives, and the Bureau of Conveyances.

# **CULTURE-HISTORICAL CONTEXT**

The chronological summary presented below begins with a discussion of the peopling of the Hawaiian Islands and a generalized model of Hawaiian prehistory. It is followed by a summary of Historic events in the Hawaiian Islands after the arrival of Western explorers in 1778. The summary presents both legendary and historical references specific to Honokōwai Ahupua'a, as well as oral traditions and first-hand Historic accounts recorded by missionaries and early visitors to the area, followed by a discussion of the commercial sugar industry in West Maui. It is important to note that Honokōwai's history is closely associated with both the Kā'anapali and Lahaina Districts. Traditionally this *ahupua'a* was part of Kā'anapali, however various historical revisions to the district boundaries now place Honokōwai within the modern judicial district of Lahaina (Sterling 1998). Both districts are discussed together in the text below, and are sometimes referred to in general terms as "the Lahaina/Kā'anapali region," indicating those lands situated on either side of Honokōwai Ahupua'a in the vicinity of the current study area.

# **Early Hawaiian Settlement**

While the question of the timing of the first settlement of Hawai'i by Polynesians remains unanswered, several theories have been offered that derive from various sources of information (i.e., genealogical, oral-historical, mythological, radiometric). However, none of these theories are today universally accepted (Kirch 2011). What is more widely accepted is the answer to the question of where Hawaiian populations came from and the transformations they went through on their way to establish a uniquely Hawaiian culture. The initial settlement of Hawai'i is believed to have originated from the southern Marquesas Islands (Emory in Tatar 1982). During these early times, Hawai'i's inhabitants were primarily engaged in subsistence-level agriculture and fishing (Handy and Handy 1991). This was a period of great exploitation and environmental modification when early Hawaiian farmers developed new subsistence strategies by adapting their familiar patterns and traditional tools to their new environment (Kirch 1985; Pogue 1978). Their ancient and ingrained philosophy of life tied them to their environment and kept order; which was further assured by the conical clan principle of genealogical seniority (Kirch 1984). According to Fornander (1880), the Hawaiians brought from their homeland certain universal Polynesian customs and belief: the major gods Kāne, Kū, Kanaloa, and Lono; the *kapu* system of law and order; *pu'uhonua* (places of refuge); the *'aumakua* concept; and the concept of *mana*.

The initial permanent settlements were established at sheltered bays with access to freshwater and marine resources. These communities shared extended familial relations and there was an occupational focus on the collection of marine resources. Over a period of a few centuries, the areas with the richest natural resources became populated and perhaps even crowded, and there was increasing separation of the chiefly class from the common people. As populations increased so did societal conflict, which resulted in hostility and war between neighboring groups (Kirch 1985). As time passed, a uniquely Hawaiian culture developed. The portable artifacts found in archaeological sites of this next period reflect an evolution of the traditional tools and distinctly Hawaiian inventions. The *ko'i* (adze) evolved from the typical Polynesian variations of plano-convex, trapezoidal, and reverse-triangular cross-section to a very standard Hawaiian inventions of this period, as are '*ulu maika* stones and *lei niho palaoa* (ivory pendant). The latter was a status item worn by those of high rank, indicating a trend toward greater status differentiation (Kirch 1985).

As the population continued to expand so did social stratification, which was accompanied by major socioeconomic changes and intensive land modification. Most of the ecologically favorable zones of the windward and coastal regions of all major islands were settled and the more marginal leeward areas were being developed. During this expansion period, additional migrations to Hawai'i occurred from Tahiti in the Society Islands. Rosendahl (1972) has proposed that settlement at this time was related to seasonal, recurrent occupation in which coastal sites were occupied in the summer to exploit marine resources, and upland sites were occupied during the winter months,

with a focus on agriculture. An increasing reliance on agricultural products may have caused a shift in social networks as well; as Hommon (1976) argues, kinship links between coastal settlements disintegrated as those links within the *mauka-makai* settlements expanded to accommodate the exchange of agricultural products for marine resources. This shift is believed to have resulted in the establishment of the *ahupua*'a system sometime during the A.D. 1400s (Kirch 1985), which added another component to an already well-stratified society. The implications of this model include a shift in residential patterns from seasonal, temporary occupation, to permanent dispersed occupation of both coastal and upland areas.

The *ahupua'a* became the equivalent of a local community, with its own social, economic, and political significance. *Ahupua'a* were ruled by *ali'i 'ai ahupua'a* or chiefs who controlled the *ahupua'a* resources; who, for the most part, had complete autonomy over this generally economically self-supporting piece of land (Malo 1951). *Ahupua'a* lands were in turn, managed by an appointed *konohiki* or lesser chief-landlord. The *ali'i-'ai-ahupua'a*, in turn, answered to an *ali'i 'ai moku* (chief who claimed the abundance of the entire district). Thus, *ahupua'a* resources supported not only the *maka'āinana/hoa'āina* (commoners/native tenants) and '*ohana* (families) who lived on the land but also contributed to the support of the royal community of regional and/or island kingdoms. *Ahupua'a* residents were not bound to the land nor were they considered to be the property of the *ali'i*. If the living conditions under a particular *ahupua'a* chief were deemed unsuitable, the residents could move freely in pursuit of more favorable conditions (Lam 1985). This structure safeguarded the well-being of the people and the overall productivity of the land, lest the chief loses the principle support and loyalty of his or her supporters.

Ahupua'a are land divisions that typically incorporated all of the eco-zones from the mountains to the sea and for several hundred yards beyond the shore, assuring a diverse subsistence resource base (Hommon 1986). Although the ahupua'a land division typically incorporated all of the eco-zones, their size and shape varied greatly. Many ahupua'a were further divided into smaller land units termed 'ili. 'Ili were created for the convenience of the ahupua'a chief and served as the basic land unit, which hoa 'āina often retained for long periods of time (Jokiel et al. 2011; MacKenzie 2015). As the 'ili themselves were typically passed down in families, so too were the kuleana (responsibilities, privileges) that were associated with it. The right to use and cultivate 'ili was maintained within the 'ohana, regardless of any change in title of the *ahupua* 'a chief (Handy and Handy 1991). Malo (1951), recorded several types of '*ili*: the *'ili pa'a*, a single intact parcel, and the *'ili lele*, a discontinuous parcel dispersed across an area. Whether dispersed or wholly intact, the 'ili land division required a cross-section of available resources, and for the hoa 'aina, this generally included access to agriculturally fertile lands and coastal fisheries. While much of the same resource principles applied to the 'ili kūpono, these land units were politically independent of the ahupua'a chief. This designation was applied to specific areas that were exceptionally productive and highly valued by the ruling chiefs, such as fishponds (Handy and Handy 1991). This form of land subdividing was integral to Hawaiian life and was the product of resource management planning that was strictly adhered to. In this system, the land provided fruits and vegetables and some meat for the diet, and the ocean provided a wealth of protein resources (Rechtman and Maly 2003). In communities with long-term royal residents, divisions of labor (with specialists in various occupations on land and in the procurement of marine resources) were also strictly enforced.

Following the formalization of the land tenure system and continued social stratification, the quest to consolidate chiefdoms launched many independent political campaigns. Up until the rule of the *ali*'i Pi'ilani, a mid to late 16<sup>th</sup>-century chief, the island of Maui was divided into two domains, West Maui and the Hāna region, both of which were ruled by independent chiefs (Handy and Handy 1991; Kirch 2010). Prior to Pi'ilani's consolidation of Maui under his rule, oral history accounts indicate that Hawai'i and O'ahu Island chiefs provided political backing to certain Maui chiefs (Kirch 2010). By the late 18<sup>th</sup>-century, the Hawaiian archipelago was divided into four independent kingdoms that were frequently at war with each other. Maui Island was second to Hawai'i Island as the largest polity and included the neighboring islands of Kaho'olawe and Lāna'i (Kirch 2011). By this time, a young and rising Hawai'i Island chief name Kamehameha would draw upon the newly introduced foreign technologies to advance his political campaign to unify the entire archipelago under his rule.

# A Brief History of Hawai'i After Western Contact

The arrival of Western explorers in Hawai'i in 1778 signified the end of the Precontact Period and the beginning of the Historic Period. With the arrival of foreigners, Hawai'i's culture and economy underwent drastic changes. Demographic trends during this time indicate population reduction in some areas, due to war and disease, yet an increase in others, with relatively little change in material culture. At first, there was a continued trend toward craft and status specialization, intensification of agriculture, *ali'i* controlled aquaculture, the establishment of upland residential sites, and the enhancement of traditional oral history. The Kū cult, *luakini heiau*, and the *kapu* system were at their peaks, although western influence was already altering the cultural fabric of the Islands (Kent 1983; Kirch

1985). Foreigners very quickly introduced the concept of trade for profit, and by the time Kamehameha I had conquered O'ahu, Maui, and Moloka'i in 1795, Hawai'i saw the beginnings of a market system economy (Kent 1983). Some of the work of the commoners shifted from subsistence agriculture to the production of foods and goods that they could trade with early visitors. Introduced foods often grown for trade with Westerners included yams, coffee, melons, Irish potatoes, Indian corn, beans, figs, oranges, guavas, and grapes (Wilkes 1845). By 1810, Kamehameha managed to conquer the Hawaiian Islands through military force, with the exception of Kaua'i, which he brought under his control through peaceful negotiations. In 1819, Kamehameha died and the *kapu* system that governed all aspects of traditional Hawaiian society was symbolically abolished when Liholiho (son of Kamehameha) ate in the presence of his mothers, Keōpūolani and Ka'ahumanu. Shortly after 1820, Christianity established a firm foothold in the islands, and introduced diseases and global economic forces began to have a devastating impact on traditional lifeways.

# Honokōwai Ahupua'a

The traditional system of land and resource management in the Hawaiian Islands developed at different times under different chieftainships. For Maui, is it said that this system developed under the rule of the two chiefly brothers Kakae and Kakaalaneo, and their priest, Kalaika'ohi'a (Handy and Handy 1991). Under their rule, the island of Maui is said to have been divided into some eleven or twelve major districts or *moku o loko* (Figure 32), sub-districts, and smaller divisions (Fornander 1880; Handy and Handy 1991; Maly and Maly 2007). These two brothers ruled West Maui and Lāna'i jointly, and the areas of Keka'a (in Honokōwai) and Lahaina along the shore of West Maui—with their easy access to sprawling agricultural fields, freshwater, rich fisheries, and dense population—were established as royal centers for the island's ruling chiefs (Fornander 1880; Handy and Handy 1991; Kirch 2010).

The current study area is situated within Honokōwai Ahupua'a, whose name has been translated by Pukui et al. (1974:49) to mean a "bay drawing water." This ancient land division is bounded to the north by the *ahupua'a* of Māhinahina, Kahana, Honokahua, and Honokōhau, and to the south by the *ahupua'a* of Paunau, Hāhākea, Wahikuli, and Hanaka'ō'ō (Figure 33). Included within the *ahupua'a* is the *'ili* of Mo'omuku, an independent land division with several non-contiguous sections spread across Honokōwai. The name Honokōwai is also applied to a large gulch and (formerly) perennial stream that carries water from the West Maui mountains through the center of the *ahupua'a* to the Pacific Ocean. At the coast, Honokōwai Bay is one of six culturally celebrated bays (*hono*) along the shore of West Maui that was traditionally referred to as "Nā Hono a Pi'ilani" (lit. the bays of Pi'ilani)—and epithet famed in traditional songs and chants. The names of these six celebrated bays are Honokōwai, Honokeana, Honokahua, Honolua, Hononana, and Honokōhau (Ashdown 1976). The name, Nā Hono a Pi'ilani name was given to these areas after the chief Kihaapi'ilani managed to unite the islands of Maui, Moloka'i, Lāna'i, and Kaho'olawe under his rule (cf. Manu in Sterling 1998).

Traditionally, Honokōwai Ahupua'a was situated within the *moku o loko* of Kā'anapali, which was also known by other variants including "Pōhaku-Kā'ana-pali" (lit. stone rolling cliff) and "Kā'anapali-pōhaku" (lit. rolling stone cliff) (Pukui et al. 1974). Handy and Handy provided the following description of south section of the Kā'anapali District:

North of Lahaina are five valleys watered by streams draining the western slopes of the West Maui watershed: Honokowai, Kahana, Honokahua, Honolua, and Honokohau. The first four all had extensive *lo 'i* lands in their valley bottoms, where terraces rose tier on tier in symmetrical stone-faced *lo 'i*. On this part of the coast there is no sloping *kula* land seaward of the valleys as there is back of Lahaina and southwestward. (Handy and Handy 1991:494)

Traditionally, Honokōwai's southern boundary was coterminous with the southern boundary of the Kā'anapali District, but now a days its northern boundary is conterminous with the northern boundary of the Lahaina District, and due to this geographical location at the boundary between these two political districts, Honokōwai's history is closely tied to both Kā'anapali and Lahaina (Sterling 1998). The name Lahaina, formerly pronounced "Lāhainā," has been translated by Pukui et al. (1974:127) as "cruel sun," and is said to refer to a time of brutal droughts on the Island of Maui. Sterling (1998:16) relates that:

According to M. K. Pukui, both Ilalaole and Mookini say it refers to a time of terrible drought when the sun was so cruel to the people that it caused everything to wither and dry. Sterling contends that this account refers to the time of the Chief Hua of Lahaina, whose killing of his priest brought on the terrible drought.

Together, Kā'anapali and Lahaina make up the northwesternmost lands on the island of Maui on the northwestern slopes of the West Maui Mountains, which was known traditionally as Mauna Kahalawai. Mauna Kahalawai is the

older of two massive shield volcanoes that together form the island of Maui (Juvik and Juvik 1998). While the geological history reveals the antiquity of these islands, traditional Hawaiian lore tells of the mythological birth of the island as described in the chant titled *Ka Mele A Pakui*. This chant describes the Hawaiian Islands being physically born from the union of Wākea and his wife Papa. According to Fornander (1916–1917), this *mele* was composed by Pakui, a priest and historian who lived during the time of Kamehameha. The *mele* describes the island of Maui as the second child born to Papa and Wākea, and gives the island's birth name as Mauiloa. The section of the *mele* describing the birth of Maui reads as follows:

O Wakea laua o Kane,	Of Wakea together with Kane,
O Papa o Walinuu ka wahine.	And Papa of Walinuu the wife.
Hookauhua Papa i ka moku,	Papa conceived an island,
Hoiloli ia Maui,	Was sick of child-sickness with Maui,
Hanau Mauiloa he moku;	Then was born Mauiloa, an island;
I hanauia he alo lani,	Was born with a heavenly front,
He Uilani-uilani,	A heavenly beauty, a heavenly beauty,
Hei kapa lau maewa	Was caught in the <i>kapa</i> of waiving leaves.
-	(Fornander 1916–1917:12–13)

Fornander (1880) adds that Mauiloa was also the name of a ruling chief who descended from the chief Paumakuaa-Huanuikalalailai. In examining the island name, Sterling (1998) contends that Ihikapalaumaewa was one of the ancient names of this island; a portion of which is also found in the *Mele A Pakui*. Sterling (ibid.:2) further qualifies the name stating, "[i]t was called by the new name of Maui after a famous child of Wakea and Papa who became ancestor of the people of Maui."

## Winds and Rains of Lahaina and Kā'anapali

Understanding wind and rain names and their characteristics were an important part of the traditional, largely placebased, *Kanaka Maoli* (Hawaiian) knowledge system that was handed down orally through the generations. Nuanced poetical references demonstrating the pride and connection to one's homeland was the topic in one such account printed in the October 26, 1871 issue of the Hawaiian language newspaper *Ke Au 'Oko'a*. The article, originally titled *Na hiohiona o Lahaina, a me kona mau kulana, a me na hana e hana ia nei e kolaila mau keiki kupa* (Features of Lahaina and its qualities, and the deeds of its native children), was authored by G. H. Hanakauluna (1871), a resident of Pana'ewa Ahupua'a, Maui (to the south of Honokōwai). Hanakauluna briefly describes the vast agricultural landscape in this region along with the names and characteristics of the different winds. Select portions of Hanakauluna's article have been translated by the lead author of this report and are presented below:

Lahaina is one of the principle towns of the Hawaiian Kingdom, it is the second largest town. It is a place where plants that delight the palate grow in profusion, such as coconuts, breadfruit, banana, sugar cane, sweet potato and yam as well as plants that were introduced from foreign countries such as the wī, mango, pine, algaroba, monkeypod and others.

ITS FEATURES: It is screened by a line of mountains named Lihau-wai-'eke'eke-i-ka-lani, the mountain whose famed *lehua* blossoms were worn in *lei* by our youths in Lahaina's noted days...

Lahaina is arid because of its continuous breezes. The Kaomi wind comes from the channel between Moloka'i and Ka'anapali; the Ma'a'a wind comes from between Lāna'i and Kaho'olawe; the Hau, from the mountain at night; the Moa'e, from between Kaho'olawe and Molokini; and the Huli-alopali from 'A'alaloloa. When the wind blows to Kanaha, before the face of the cliff of Kahiki, the battle hill, that wind is the Kaua'ula. When the cold pierces like the points of spears, from a wind that comes from the north by way of Mauna-ho'omaha, it is the Ho'olua wind. If it is directly from Hua'i-ka-weo, the wind is the Imihau.

There are winds that blow recklessly. The Kona is that [reckless] wind that blows from directly in front of Lahaina. The familiar winds are the Ma'a'a, Kaomi, Moa'e and Hau. The unusual winds that blow are the Kaua'ula, the Imihau, the Ho'olua and the Kona. If a gentle sea breeze, similar to the Ma'a'a blows at night, that wind is the Ululoa and it is *kapu* to go on the sandy shores of Lahaina then, lest one encounter the procession of ghosts, the marchers of the night, according to the old folks. And where the waves break nicely, that is the famous surf of Uo. The surf breaks of 'A'aka and Hauola are on either side of Keawaiki, the landing place for the wharf boats and boats from other places. (Hanakauluna 1871:1)

With respect to the immediate study area, Akana and Gonzalez (2015) in their book *Hānau Ka Ua Hawaiian Rain Names* associates the Nahua and Līlīlehua rain with Honokōwai as well as the greater Kā'anapali District. Akana and Gonzalez (ibid.) draw from a variety of traditional literary sources such as *mele* and *oli* (songs and chants) as well as '*ōlelo no 'eau* (Hawaiian proverbs and poetical expressions). The excerpts below include those references that make explicit reference to Honokōwai or a variant name (i.e. Honokawai or Honowai):

Hopu Kahana i ka ua Līlīlehua Palahe'a nō i ke pili o Honokōwai 'Uku li'i ka pua onaona, nonoho i	Kahana seizes the Līlīhehua rain Stained by the <i>pili</i> grass of Honokōwai The fragrant blossoms are tiny, dwelling upon
ka maa u Nonohe nõ me he līlīlehua ala	Attractive like the <i>līlīlehua</i> flower
Kaʻapoa e ka Nahua o nā pali	Caught by the Nahua of the cliffs (ibid.:156)
Me he lole 'ula i pili ala ka Nahua Ka pili 'a'ai i ke kula o Honokōwai	Like a red cloth clinging there is the Nahua Clinging—bright and brilliant—to the plains of Honokōwai (ibid.:181)
Kuleana i Keka'a ka ua Nahua Ka Līlīlehua anu i ka uka o Honowai	The Nahua rain belongs in Keka'a The cold Līlīlehua rain in the upland of Honowai. (ibid.:182)
Ke oho ua Paʿūpili o Lele Līlīlehua i uka o Honokawai	Tresses that sweep like the Paʿūpili rain of Lele Like the Līlīlehua wind and rain above Honokawai. (ibid.:224)

In the account of G. H. Hanakauluna, and those presented by Akana and Gonzalez, the names of the winds and rains, each of which is identifiable by its own unique characteristics, are recounted. As described above, certain winds and rains were associated with specific places and appear to have informed certain traditional customs and beliefs. With respect to Honokōwai, one such account makes reference to the *pili (Heteropogon contortus)* grass that once grew in this area.

# Traditional Legendary Accounts of Honokōwai

Prior to first contact with Europeans during the late 18<sup>th</sup> century and the development of a written Hawaiian language, the history of ancient Hawaii was transmitted orally from generation to generation. After the arrival of the first missionaries in 1820, Hawaiian culture underwent major transformations, one of which included the adoption of the written language. Although oral traditions were still maintained, many natives and foreigners began to record many generations worth of traditional knowledge with pen and paper. These early writings provide invaluable insight into the islands' past, and record important elements of Hawaiian culture, such as the names and deeds of historical figures, beliefs, traditions, *wahi pana* (legendary places), *inoa 'āina* (place names), and *mo 'olelo* (legendary accounts, stories, myths), *mele* and *oli* (songs and chants), and *'ōlelo no 'eau* (proverbs and poetical expressions); all of which contribute to a more in-depth understanding of the Hawaiian people, their culture, and their island lands.

Traditional legendary accounts recorded for Honokōwai Ahupua'a largely discuss the coastal area of Pu'u Keka'a, with its large promontory known colloquially as Black Rock. Many of the accounts tell of certain rock formations and their association with the famed cultural hero, Māui, his companion/tormentor at Keka'a, Moemoe, and other mythical beings. Other accounts describe the Keka'a area as a *leina a ka 'uhane* or "the casting-off place of the soul," indicating that this area was significant in traditional Hawaiian customs associated with the afterlife (Fornander 1918–1919:574–575). Keka'a is also mentioned in passing as a Precontact landing place in the *Legend of Halemano* and the *Legend of Namakaokapaoo*, recounted by Fornander (1918–1919). Since these latter two accounts provide only passing reference to this area they are not discussed further, but several legendary accounts relating to the of exploits of Māui and Moemoe are detailed below.

Figure 33. Google Earth<sup>™</sup> satellite image showing the *ahupua* 'a in the vicinity of the study area.

# Māui Raises the Heavens then Transforms his Critic to Stone

W. D. Westervelt's account of Māui's quest to raise the heavens makes reference to the area of Keka'a in Honokōwai. In his 1910 publication titled *Legends of Maui—A Demigod of Polynesia and of His Mother Hina*, he tells of a time when the heavens had fallen down on the earth. As the plants began to grow, they pressed up against the sky causing the leaves to become flat. The low hanging sky made it difficult for both plants and humans to grow. However, as the plants grew upwards, they helped to prop the sky up inch by inch, but it was still difficult for men to travel from place to place. After a long time, Māui became fed up by this and went to a woman and said "give me a drink from your gourd calabash, and I will push the heavens higher" (Westervelt 1910:31). The woman consented and handed Māui her gourd. After taking a deep draught, Māui braced himself against the clouds and with his strength, lifted the heavens as high as the treetops. He again pushed upwards and trusted the heavens as high as the mountains. Māui once more, with great exertion pushed the heavens up and pressed them into the place that they now occupy. As Māui was completing this great task, a man who had been watching the feat closely began to ridicule him. After hearing the unkind remarks, Māui turned to punish his critic but the man fled to the other side of the island. With great agility, Māui pursued the man and captured him in an area several miles north of Lahaina, and after a brief struggle the man was changed "into a great black rock, which can be seen by any traveler who desires to localize the legends of Hawaii" (ibid.:32).

# Keka'a, Home of Māui and Moemoe

In relating another traditional account of Pu'u Keka'a, on January 24, 1872, S. Kaha penned an article published by Abraham Fornander in the fifth volume of his series *Fornander Collection of Hawaiian Antiquities and Folk-lore*. Kaha's brief narrative, which is reproduced below in its entirety, tells of a flood that deposited a *kukui* (Candlenut

tree; *Aleurites moluccanus*) tree onto the nostril of the sleepy Moemoe, who was a companion of Māui. Kaha's article reads thusly:

At Kekaa lived Maui and Moemoe; the great desire of one was to sleep; his head on the pillow, there he would lie until Welehu became the month. This person was Moemoe. The other desired to travel. When Moemoe slept, Maui was traveling, each according to his taste. While Moemoe was sleeping a freshet came down and covered him with debris, with the exception of his nostrils; a kukui nut, however, rested on his nostrils and commenced to grow. It grew tall and at the same time tickled the nostrils of Moemoe; so he awoke and said: "Here I am at my favorite pastime, asleep, and yet I am awakened by this cursed kukui tree." So he made up his mind to give up this to which he was addicted and to search for his friend, Maui. (Fornander 1918–1919:544)

S. Kaha then mentions an ancient pathway named "*ke alanui kikeekee a Maui*" that passed along the northeast side of Keka'a, which was said to have been named after Māui, and relates that "the first one who trod this pathway, however, was Eleio, the fast runner of Kaalaneo, the excellent king of that period" (Fornander 1918–1919:544).

#### Māui Snares the Sun the Turns Moemoe into Stone near Keka'a

Māui and Moemoe are also featured in another account associated with the Keka'a area describing how Māui snared the sun. This account, first recorded by Reverend A. O. Forbes and published in Thomas G. Thrum's *Hawaiian Almanac and Annual for 1881*, tells of Māui's exploits as he set out to slow the racing sun (Forbes 1881). Later, in 1922, Thomas Maunupau published another version of the story in the Hawaiian language newspaper, *Ka Nūpepa Kū 'oko 'a*, which was later translated by Mary Kawena Pukui, and a portion of the translated article was published by Sterling (1998).

In Forbes (1881) account, Māui lived with his mother Hina, the great *kapa* maker, in an area called Makalia (Makaliua) above Kahakuloa in West Maui. Hina labored each day preparing her *kapa* which she would set out to dry, however, the days were so short that her *kapa* could not dry properly. To accomplish this task, Hina would have to haul her sheets of *kapa* out each day so that they could dry. Māui, upon witnessing this daily labor, became filled with pity for his mother, so he decided he would set out to slow the racing sun.

Māui first traveled to Wailohi in the Hāmākua District of East Maui to study the course of the sun. After closely analyzing the path of the sun, Māui devised his plan. He then went to Paeloko at Waihe'e where he cut down all the coconut trees from which he used the fibers to prepare very durable cordage. Observing Māui's action Moemoe called out "Thou will never catch the sun. Thou art only an idle nobody," to which Māui replied, "When I conquer my enemy, and my desire is attained, I will be your death." To this, Māui set out and managed to lasso the legs of the sun forcing it to slow its course through the sky. After his grueling match with the sun, Māui returned from his exploits and began his search for Moemoe. In describing Māui's quest, Forbes writes:

He [Māui] went on in his pursuit till he came upon Moemoe at a place called Kawaiopilopilo, on the shore to the eastward of the Black Rock, called Kekaa, north of Lahaina. Moemoe dodged him up the hill and down, until at last, Maui, growing wrathy, leaped upon and slew the fugitive. And the dead body was transformed into a long rock, which is there to this day by the side of the road going past "Black Rock." (Forbes 1881:59)

Maunupau's account mirrors that of Forbes but he includes the following description of the Moemoe's lithified body:

Maui became very angry and leaped down on him and caught him on the upper side of Kekaa. There he was killed. He turned into a rock. The rock is that long one that lies on the lower side of the new road. It is almost seven feet in length. (Sterling 1998:49)

#### Māui Saved by an Owl

Maunupau's account of how Māui was saved by an owl picks up where the account telling of how Moemoe was turned to stone leaves off. Maunupau reports that after Māui killed Moemoe, he returned home to his mother, Hina to find that she had become pregnant and had given birth to an owl. Maunupau then describes how this guardian owl flew to the top of Keka'a before helping Māui return home safely. Maunupau's story is presented below:

When Maui returned to his birthplace at Makaliua he saw the owl being fed by his parents and did not feel jealous. After his return, he went fishing very often. He was very fond of pole fishing at night. One night he went to the beach to fish and as he was occupied, a canoe of the chief's came to look for a heana, a victim to lay on the altar at the heiau. He was caught and taken to serve as a

victim for the chief at Halulukoakoa. It was located a Moalii, West Maui. He was to be sacrificed the very next day.

In the meantime Hina saw what had befallen Maui in a dream, and went with the owl as far as Pohaku-o-wahine-mama. It was between Keawaawa and Kokonamoku. There Hina remained. The owl flew to the place where Maui was guarded. Most of the guards were not asleep. It saw that Maui was tied with sennit ropes. The owl watched until early morning, but one guard did not go to sleep. Maui said, "O Aina, prolong the night." The night became longer and everybody fell asleep.

The owl entered, came up to him, removed his bonds and together they went to where Hina was. Daylight came quickly. She put Maui on the inside and occupied the outside herself. When the sun came up, she took a sleeping tapa and spread it over her thighs and laid down again.

The owl flew up to Kekaa. Searchers came and asked, "Did you see the chief's victim?" No, I had just gotten up and as the sun was high I thought of looking if any insects had gotten into my kapa."

As soon as they were gone, they went toward the upland. The owl went before, Maui was between and Hina behind until they reached home. That was how he escaped death. (Sterling 1998:49)

#### Pohaku O Wahine O Manua

During the early 1900s, Thomas G. Thrum began inventorying and collecting information on Hawaiian *heiau* structures. The information gathered by Thrum was subsequently published in his yearly publication titled *Hawaiian Annual*. In the *Hawaiian Annual for 1909*, Thrum (1908a:45) recorded a story, which he gathered from a "late care-taker" for the *heiau* of Wailehua and Halulukoakoa (both of which are in Lahaina) about a woman who had escaped her abusive husband and hid near a large stone in an area *mauka* of Keka'a. Thum's version of this story is presented below in its entirety:

"Halulukoakoa, a coral structure, is famed traditionally as having given shelter to Wahine-o-Manua, a very beautiful young woman who fled from her husband in consequence of constant ill treatment. Regardless of the rigid kapu of the heiaus against women being allowed within its sacred walls, she hid herself therein and watched those searching for her. On their departure she ventured forth and on reaching the road an owl god appeared to her as guardian and guide, and by the clapping of its wings led the pursued girl through the brush till she reached the large stone mauka of Kekaa, Kaanapali, where it left her and she lay down and slept till morn, when she arose and departed. The stone is known as Pohaku o Wahine o Manua. (Thrum 1908a:45)

# Keka'a: A Leaping Place for the Souls

In Fornander's (1918–1919) Collection of Hawaiian Antiquities and Folklore, he published an article written by S. Kamaka concerning traditional Hawaiian concepts and rituals associated with death and the afterlife. In this article, Kamaka acknowledges that "Hawaiians are not agreed in the idea of what becomes of the soul after a person dies," however, he elaborates on certain Hawaiian customs and beliefs, one of which includes the concept of *leina*. Kamaka lists specific places around the islands that were considered a "*leina a ka 'uhane*" or *a* "casting-off place of souls" (ibid.:574-575). Kamaka notes that there were at least two known *leina* on the island of Maui, "at Keka'a and the plains of Kamaomao" (ibid.:574). A footnote appearing in the article explains that these *leina* served as a point of departure for the abiding spirit "in its leap to find its aumakuas [ancestral deities] for guidance and companionship, or failing such, to descend to the realm of Milu" (ibid.:574).

Similarly, Fornander published an article by S. Kaha, who also wrote about Keka'a as a *leina*. In Kaha's account it is noted that Keka'a was considered a "ghostly place" (ibid.:542). In describing Keka'a as a *leina*, Kaha explains that only the spirits of the "*kanaka makaainana*" or common people came to Keka'a. The following paragraph is an excerpt from Kaha's article that makes explicit reference to this area:

It is said that when a person dies his spirit journeys to Kekaa; if he has a friend there who had previously died, that one would drive it away when the spirit is nearing Kekaa. Sometimes the spirit of a person would return and re-enter the body, and cause it to come to life again; that is what has happened to those who are living again. Many souls came to this place, Kekaa. It is called the Leina-a-ka-uhane, the leaping place of the soul. Only the spirits of the subjects go to Kekaa; the souls of farmers and the souls of chiefs fo to the volcano when they die. If they have friends there some of them are driven back [whence they re-enter the body] and live again. (ibid.:542)

As demonstrated above, many of the traditional and legendary accounts for Honokōwai are centered around the Pu'u Keka'a vicinity—a place with a rich history. Clearly, this area was of great importance during Precontact times

for not only the living but also for the deceased. While the accounts presented above focus on the traditional and legendary aspects of Hawaiian culture, Honokōwai and Keka'a are both featured in the island's political history, which is detailed below.

#### Maui's Ruling Chiefs and the Political Center of Keka'a in Honokowai

History concerning the early chiefly rule on Maui describes an ever-shifting political system marked by periods of independent chiefdoms with rule over the entire island, and periods when the rule of the island was divided between East Maui, comprising the districts of Ko'olau, Hāna, Kīpahulu, and Kaupō, and West Maui, comprising the districts of Kā'anapali and Lahaina (Cachola-Abad 2000; Fornander 1880; Kamakau 1992). Fornander traces the Maui chiefly lineage to Paumakua, who was a descendant of the Hema branch of the Ulu line, and whose genealogy spread over Maui and Hawai'i Island. Fornander writes:

...there is little to tell of the Maui *Paumakua* of the *Hema* line, the son of *Huanuikalalailai*... Through his son *Haho* and grandson *Palena* he became the great-grandfather and progenitor of the noted *Hanalaa*, whom both the Maui and Hawaii chiefs contended for as their ancestor under the varying names of *Hanalaa-nui* and *Hanalaa-iki*, asserting that *Palena* was the father of twins who bore those names. (Fornander 1880:26–27)

Cachola-Abad (2000:175) writes that "each of these ali'i nui seemed to have served as the nominal sovereign over the entire of Maui." However, the political distinction between the East and West Maui chiefs appears to have occurred during the time of Palena or Hanala'a (ibid.). This political division lasted until the time of the 16th-century high chief Kiha-a-Pi'ilani, who managed to consolidate the island under his rule (Kirch 2010). Prior to Kiha-a-Pi'ilani's consolidation, the chiefs ruling the greater part of Maui, also ruled over the island of Lāna'i, and at times Moloka'i (Fornander 1880; Kirch 2010).

Paumakua's son, Haho is remembered in Hawaiian history as the founder of the '*aha ali*'i, a council of chiefs and priests that conferred the rank of a chief by tracing their chiefly descent, and ensuring their genealogy remained undisputed. To protect the purity of these royal lineages, *ali*'i families were also afforded extra protection during times of warfare, as they were sometimes ceremonially sacrificed. Chiefs of the '*aha ali*'i were entitled to wear the insignia associated with his or her rank, such as the *lei hulu* (feathered *lei*), '*ahu* '*ula* (feathered cloak or cape), *lei niho palaoa* (ivory pendant), and they traveled with painted red sails on their canoes (ibid.). It has been suggested that the creation of the '*aha ali*'i came about during what is often referred to as the "migratory period" of Hawaiian history, an era marked by the intensification of social institutions and political and religious organization (Cordy 2000:200; Fornander 1880). Fornander further clarifies that the '*aha ali*'i "arose, probably, as a necessity of the existing conditions of things during this migratory period, as a protection of the native aristocracy against foreign pretenders, and as a broader line of demarcation between the nobility and the commonality" (ibid.:30).

During these politically formative years, the names of several other West Maui chiefs were also recorded including Mauiloa, whose name appears in the *Mele A Pakui*, as well as Kuhimana, Kamaluohua, Lo'e, and Kahakuohua, but little is known of their life or legacy (Fornander 1880; Kirch 2010). Kuhimana's son, Kamaluohua, whose reign was marked by warfare, is said to have ruled over the greater part of Maui, while the chief Wakalana ruled over East Maui (Cachola-Abad 2000; Fornander 1880). With respect to the proliferation of the greater West Maui region, credit is given to two chiefly brothers, Kakae and Kakaalaneo, who co-ruled over West Maui and Lāna'i sometime during the 14<sup>th</sup> century (Maly and Maly 2007). Their father was Kaulahea I, whose is said to have had a peaceful reign (Fornander 1880:19). Known for his thrift and energy, Kakaalaneo is well-remembered in Maui's history. Handy and Handy (1991:491) relate the following information about Kakaalaneo:

Kakaalaneo lived on a hill named Keka'a in Lahaina District, owned fishponds on the shores of fardistant Hana, planted a famous breadfruit grove, and married a Moloka'i chiefess who brought him the first feather cape seen on Maui.

Kakaalaneo had two children with Kanikaniaula, the eldest was a female named Wao, and their son, Kaululaau, both of whom figure prominently in the history and legendary accounts of the Kā'anapali and Lahaina Districts. Fornander (1918–1919) reports that Kakaalaneo established the area of Keka'a as his political center, in addition to planting the famed '*ulu* (breadfruit) groves of Lahaina, (which was known by the name Lele during his reign), as well as constructed the irrigation ditch system, which he named after his daughter Wao (ibid.). In describing the densely inhabited area of Keka'a, Fornander writes:

It is said that there were many people there [at Keka'a]. Many houses were constructed and the people cultivated a great deal of potatoes, bananas, sugarcane, and other things of a like nature. From what I have been told that country from above Kekaa to Hahakea and Wahikuli, that country

now covered with cactus in a northwesterly direction from Lahainaluna, was all cultivated; Keka'a became a city populated by a great many; this chief [Kaalaneo] also planted the breadfruit and kukui trees down at Lahaina. (Fornander 1918–1919:541, 542)

As described in the preceding section of this report, the lands of Keka'a are celebrated in traditional lore and are described as the birthplace of Kaululaau, son of Kakaalaneo. This coastal area, characterized by its sand dunes, is also noted as a place containing a great number of human burials and is remembered as a *leina a ka 'uhane* (leaping place of the souls) (Sterling 1998).

## The Reign of Pi'ilani and his sons Lonoapi'ilani and Kihaapi'ilani

The chiefly succession of West Maui also includes Kakaalaneo's brother Kakae, who begat a son, Kahekili I with the chiefess Kapohauola. Kahekili I's son, Kawaokaohele married the chiefess, Kepalaoa who bore the distinguished Pi'ilani, a 16<sup>th</sup>-century high chief whose rule was marked by peace and industry among the people (Fornander 1880). Pi'ilani was a contemporary of Līloa, a powerful Hawai'i Island chief (Cordy 2000). Pi'ilani married his first cousin, Lā'ielohelohe, who was born at Helumoa and raised at Kaluaokau in Waikīkī, O'ahu. To them were born four children, all of whom are celebrated in Maui's chiefly lineage (Kamakau 1991). In his book *Tales and Traditions of the People of Old*, Kamakau (ibid.:49) describes the arrival of Lā'ielohelohe to Lahaina:

On Lā'ielohelohe's voyage to Maui to marry Pi'ilani, her canoes were adorned with red things, a red sail, and retainers dressed in red. As they approached Lahaina, the Pa'ūpili rain retreated to the uplands of Kanahā and the red most of Ka'ānapali appeared for the enhancement of Lā'ielohelohei-ka-wai.

Building upon the legacy of his chiefly ancestors, Pi'ilani continued to solidify Lahaina as a chiefly center by establishing the islet of Moku'ula and Mokuhinia Pond located in Lahaina as his home. Historical descriptions concerning the life and rule of Pi'ilani often reference his sacred genealogy, peaceful rule, and his initiation of large scale public work projects. In his book *Moku'ula Maui's Sacred Island*, Klieger (1998) explains each of these attributes associated with Pi'ilani's rule:

Pi'ilani, Maui's greatest king, is credited with creating a road that encircles the entire island of Maui. Upon this trail the great  $m\bar{o}$ ' $\bar{i}$  made frequent tours throughout the land, collecting taxes during the time of the Makahiki and seeing to general order. He ruled from Lahaina and is known to have died there. (ibid.:9)

The Maui royal family descended from Pi'ilani was notable in the archipelago for carefully maintaining and replicating *mana* through the *kapu* system and through brother-sister (pi'o) or other closely related matings, in imitation of the creative passions of Papa and Wākea. This marriage pattern was especially frequent in the eighteenth century, resulting in great prestige for the Maui line. The power generated by several generations of pi'o mating by the sacred members of the Pi'ilani family and the restrictions associated with their *kapu* made the family's dignity, ascribed authority, and status practically unrivaled among the *ali'i nui* of the Hawaiian Islands. The pi'o system served to concentrate the *mana* of the gods within the ruling class. Especially important was the power of the guardian Kihawahine among the Maui royal family, a symbol of the family's *mana*. (ibid.:15)

According to Kamakau (1991), Pi'ilani's union to Lā'ielohelohe resulted in the birth of four children: Lonoapi'ilani, their eldest son, then two daughters Pi'ikeaapi'ilani and Kalā'aiheana, and finally, the youngest son Kihaapi'ilani— who would become his brother's greatest rival. Kihaapi'ilani unlike his siblings was born and raised on O'ahu and later returned to Maui at the time of his father's death. The eldest daughter Pi'ikea, married the Hawai'i Island chief, 'Umi, son of Līloa. According to Mary Kawena Pukui, the youngest daughter Kalā'aiheana (also known as Kihawahine) is said to have been born as an "*'e'epa*—a human born with some sort of supernatural difference" (Klieger 1998:9). Pukui (ibid.) also maintains that upon her death, Kalā'aiheana was deified and made a *mo'o* goddess and was the only *mo 'o* with the ability to move from "pond to pond, island to island" (ibid.). She accordingly took up residence at Mokuhinia, the pond that surrounded the sacred island of Moku'ula.

Kamakau (1991) provides a description of Pi'ilani's death and the transfer of rule within his kingdom. In describing Kihaapi'ilani's return to Maui, Kamakau (ibid.:50) writes, "when he was twenty years of age, Kiha was ordered to go to Maui to become the heir apparent, the ho'oilina mō'ī; but when he reached Ka-lae-o-ka-lā'au on Moloka'i, his father Pi'ilani died at Lahaina, and the first-born, Lono-a-Pi'ilani became the mō'ī of Maui." In his book *Ruling Chiefs of Hawai'i*, Kamakau (1992) describes the succession of Pi'ilani's kingdom to his eldest son:

Pi'ilani died at Lahaina, Maui, and the kingdom of Maui became Lono-a-Pi'ilani's. He was Pi'ilani's oldest son by La'ie-lohelohe-i-ka-wai. Next to him came Pi'ikea, then Ka-la-'ai-heana and Kiha-a-Pi'ilani. It was said that there were two heirs to the kingdom, Lono-a-Pi'ilani and Kiha-a-Pi'ilani, but the latter was not present at their father's death because Oahu was his birthplace, and there he was reared. Therefore the government went to Lono-a-Pi'ilani, Pi'ilani had commanded that the kingdom be his, and that Kiha-a-Pi'ilani dwell under him in peace. In the first years of Lono-a-Pi'ilani's reign all was well, and the people were content. (ibid.:22)

Kamakau (1992) and Fornander (1916–1917) both provide detailed accounts of the brothers' feud following their father's death. Although the brothers lived together in the royal court at Ka'uiki, Hāna, Lonoapi'ilani displayed great hatred of his younger brother, which resulted in Kiha leaving the royal court. Fornander writes that:

One day while Piilani [Lonoapi'ilani] was eating with his companions, all strangers, enjoying the good things placed before them, Kihaapiilani, although present at the table, was not served with any of the good things; but, in front of him was placed a small calabash containing some small fish. This dish belong to Piilani. Seeing that this was all there was to be had within reach, he reached into the dish and took out two small fish and ate them. While doing this he was seen by Piilani. Piilani then reached for the dish and held it up in his hand, then asked of Kihaapiilani: "Who ate the fish in this dish?" Kihaapiilani replied: "I did, because there was nothing else for me to eat." Piilani then threw the dish with the fish in it, bring and all, at the forehead of his brother, breaking the dish into pieces and spattering the fish and brine into the eyes of Kihaapiilani which blinded him for a while. (Fornander 1916–1917:236)

No longer willing to endure his brother's ill-treatment, Kihaapi'ilani secretly ran away to a place in Makawao, where he met Koleamoku, a chiefess who descended from the ruling chiefs of East Maui. While living there he became a farmer and was able to temporarily conceal his identity as a chief. Kihaapi'ilani stayed in the country for some time, until he was able to garner the support needed to dethrone his elder brother, Lonoapi'ilani and his father-in-law, the ruling chief of East Maui, Ho'olaemakua (Fornander 1916–1917). As Kihaapi'ilani plotted to overthrow his brother, he developed political alliances with 'Umi, a powerful Hawai'i Island chief who was the husband of his sister, Pi'ikeaapi'ilani (Cordy 2000; Fornander 1916–1917; Kirch 2010). 'Umi summoned his war counselors to prepare for an invasion on Maui. 'Umi then ordered his district chiefs to ready the canoes and gather the warriors. Kihaapi'ilani turned his attention to slaying his brother. Differences arise regarding who was ruling West Maui at the time of this invasion. Fornander (1916–1917) writes that Lonoapi'ilani had already died and that his son Kalaninuikupuapāikalaninui was ruling West Maui. However, Kamakau (1992) contends that Lonoapi'ilani was still ruling at the time of the invasion and that upon hearing about the death of Ho'olaemākua he trembled with the fear of death, and died himeself.

Pi'ilani and his sons are well known for their completion of many large-scale public works projects around the island of Maui, including the construction of *heiau* (temples) and *loko i'a* (fishponds), as well as continuing the construction of the *alaloa* trail that circuited the entire island (Ashdown 1971; Kirch 2010; Maly and Maly 2007). The *alaloa* is said to have been paved to a width of four to six feet as it followed the coastline and branched to Haleakalā, and to Pu'u Kukui in Mauna Kahalawai, the highest peak of the West Maui mountain range (Ashdown 1971). Ashdown (ibid. 5) relates that most of the *alaloa* has since been destroyed with the exception of "two places on West Maui," and that the West Maui section of the trail was completed by Kihaapi'ilani.

#### Chiefly Rule Following the Consolidation of East and West Maui by Kihaapi'ilani

The consolidation of Maui under a single rule lasted well through the time of Kahekilinui (son of Kakae), who managed to increase his kingdom to include the islands of Moloka'i and O'ahu (Cachola-Abad 2000). Throughout the 18<sup>th</sup> century, intra-island and inter-island warfare appear to have intensified as the Maui chiefs sought to increase their kingdom and power. Fornander (1916–1917:416) relates an account of the O'ahu born chief, Kuali'i, who landed at Honokōwai after hearing of a conflict that had brewed between the east (Ko'olau) and west (Kekaha) Moloka'i chiefs:

When Kualii heard of this general conflict on Molokai, he left Hilo and set sail for Molokai. On the way Kualii touched at Honokowai in Kaanapali, Maui, where a chief by the name of Paepae arrived at the same time. This Paepae was one of the chiefs of Kekaha, and the reason why he had come to Maui was to enlist Kauhi, one of the chiefs of Maui, to come to their aid.

As the royal center for West Maui, Lahaina was hard hit by the constant warfare, especially during the conflict between Maui's royal brothers Kamehamehanui and Ka'uhi'aimokuakama (Klieger 1998). It was during this time that Kamehamehanui allied with the Hawai'i Island chief Alapa'i and prepared to wage war against Ka'uhi'aimokuakama,

who was supported by the O'ahu chief Peleioholani. Kamakau described Alapa'i's strategy of damming the waters throughout West Maui to cut off the food supply for the chiefs and the common people, he writes:

A whole year Alapa'i spent in preparation for the war with Maui. It was in 1738 that he set out for the war in which he swept the country. What was this war like? It employed the unusual method in warfare of drying up the streams of Kaua'ula, Kanaha, and Mahoma [Kahoma] (which is the stream near Lahainaluna). The wet taro patches and the brooks were dried up so that there was no food for the forces of Ka-uhi or for the country people. Alapa'i's men kept close watch over the brooks of Olowalu, Ukumehame, Wailuku, and Honokawai [Honokōwai]. When Pele-io-holani heard that Alapa'i was at Lahaina he gathered all his forces at Honokahua and at Honolua. At Honokawai [Honokōwai] an engagement took place between the two armies, and the forces of Alapa'i were slaughtered and fled to Keawawa. (Kamakau 1992:74)

Klieger (1998) further describes the destruction of the agriculture and aquaculture system of West Maui during this war, writing that:

Alapa'inui of Hawai'i interrupted the streams of Kaua'ula, Kahana [Kanahā], and Kohoma [Kahoma] in the high country above the village, toppled terraces and 'auwai, and thus destroyed the productive capabilities of the *lo'i* and fishponds below. The carefully regulated irrigation system of *lo'i*, 'auwai, ponds (*loko*), sluice gates, and embankments dating to at least the days of Pi'ilani were soundly destroyed. Being in the center of things did not always bode well for Lahaina.

Lahaina agriculture and aquaculture did not rebound between the numerous battles for interisland supremacy. Years after Alapa'i's destructive path, Lahaina's productivity still seemed marginal, according to the accounts of early Western explorers. Nathaniel Portlock reported in 1786 that West Maui had been devastated by the wars of unification. Lahaina in those days appears to have had little in the way of provisions to offer the passing explorers, perhaps less to feed itself. (Klieger 1998:19)

Kamakau (1992) goes on to describe the power of Alapa'i's forces, which numbered in the thousands and included other powerful Hawai'i Island chiefs, such as Kalani'ōpu'u and Keōua. He contrasts the size of this force with Peleioholani's army of 640 men. Kamakau adds that "Peleioholani intended to unite his forces with those of Ka'uhi, but Alapa'i's men held Lahaina from Ukumehame to Mala on the north, and in attempting to aid Ka-uhi, Pele-ioholani became involved in difficulty" (ibid.74). The O'ahu-Maui and Hawai'i Island forces eventually met at Pu'unēnē, where Peleioholani's forces were surrounded by Alapa'i's soldiers and beaten, putting an end to the brutal war.

Inter-island warfare continued, however, well into the mid-18<sup>th</sup> century, particularly during the reign of the Maui King, Kamehamehanui. Kalani'ōpu'u, the newly instated Hawai'i Island chief, and former warrior in Alapa'i's army, led a major assault against Kamehamehanui's forces. Kamakau details Kamehamehanui's genealogy and Kalani'ōpu'u's love for war, he notes:

A clever chief was Kalani'ōpu'u and an able one, famous as an athlete in all games of strength... But he had one great fault; he loved war and display and had no regard for another's right over land, as we shall see in his wars on Maui. Kamehameha-nui was the ruling chief of Maui, the first-born child of Ke-ku'i-apo-iwa-nui by Ka-lani-ku'i-hono-i-ka-moku (Kekaulike), and brother of Ka-lola, wife of Ka-lani-'opu'u, ruling chief of Hawaii. But little did Ka-lani-'opu'u care for this relationship. When he had completed the regulation of his lands on Hawaii and had lived at peace for a number of years, he went to war in 1759 with East Maui and made Hana and Kipahulu a part of Hawaii without regard for his wife, Ka-lola, and the chiefs of Maui. (Kamakau 1992:79)

Kamehamehanui ruled Maui for nearly thirty years before he fell ill and ceded his kingdom to Kahekilinui'ahumanu in 1766 (Kamakau 1992). Kamehamehanui is described by Kamakau (ibid.) as a "benevolent ruler and his government was peaceful; he did not war upon chiefs of other lands or make raids upon Hawaii, Molokai, and Oahu." For several years Kahekili ruled peacefully, however between 1775-1779 wars against Kalani'ōpu'u's Hawai'i Island forces once again raged. Kalani'ōpu'u raided and abused the people of Kaupō, Maui by beating them over the head with clubs. This battle became known as Kalaehoa, which Kamakau (ibid.:84) translates as "the forehead beaten with clubs." Hearing of the dreadful treatment of his people, Kahekili sent his soldiers to stop Kalani'ōpu'u's army, which included the great warriors Kekūhaupi'o and Kamehameha. The Maui soldiers led by Kane'olaelae drove Kalani'ōpu'u's forces back to Hawai'i Island. Embittered by his defeat against Kahekili, the resolute Kalani'ōpu'u planned another attack, only to be defeated once more. Several years passed before Kalani'ōpu'u attempted another

raid on Kahekili's lands. On his final attempt to Kalani'ōpu'u entered Maui through Lahaina and travelled up towards Pu'u Pa'upa'u in Ku'ia Ahupua'a, forcing the people to flee to Kā'anapali.

Toward the latter half of the 18<sup>th</sup> century, Maui chiefs like Kalanikūpule, son of Kahekilinui'ahumanu managed to gain control over all of the islands with the exception of Hawai'i and Kaua'i. Determined to gain control of Hawai'i Island, Kalanikūpule seized two foreign ships, the *Prince Lee Boo* and the *Jackal* from Captain Brown while at Ke'ehi, O'ahu. Kamehameha, the ruling chief of Hawai'i Island, received word from his two foreign advisors, John Young and Isaac Davis that Kalanikūpule was preparing to make war on him, and he decided to attack first, assembling a massive force that landed at Lahaina:

In February, 1795, Kamehameha's fleet of war canoe landed at Lahaina, covering the sands along the coast from Launiupoko to Mala. All that part of Lahaina given over to food patches and cane fields was at that time overrun by the men from Hawaii. (Kamakau 1992:171)

After several battles—including the famed A.D. 1790 Battle of Kepaniwai that took place in 'Īao valley, where Kalanikūpule barely escaped to Oʻahu with his life—Kalanikūpule eventually lost the rule of his island kingdom to Kamehameha. Kalanikūpule fought to recapture Maui, however, and brought his forces against Kamehameha once again at the battle of Kepūwaha'ula on Hawai'i Island near Waipi'o Valley, but neither side was victorious. Kamehameha and Kalanikūpule's forces then met one last time in 1795 at the Battle of Nu'uanu, where Kalanikūpule's warriors were forced off of the *pali* (cliff) located at the back of Nu'uanu Valley on the Island of Oʻahu. Although Kalanikūpule escaped into the Koʻolau Mountains, he was eventually caught and offered as a sacrifice to Kamehameha's war god Kūkā'ilimoku (Kamakau 1992; Kirch 2010).

After Kamehameha I conquered Maui, he gave Honokōwai Ahupua'a, along with several other of the island's lands, to Ke'eaumoku, an *ali'i* from the Kona District of Hawai'i Island, who was a staunch supporter and close advisor (Kame'eleihiwa 1992). Following Ke'eaumoku's death, his Maui lands were inherited by his son Kahekili Ke'eaumoku (also known as George Cox), who served as the Governor of Maui during the time of Kamehameha. By 1810, Kamehameha had united all of the islands under his rule and established the Kingdom of Hawai'i, which was governed by his descendants well into the 19<sup>th</sup> century. After Kamehameha died in 1819, the primary ruling center moved from Kailua on Hawaii Island to Lahaina, Maui.

#### The Death of Kamehameha I

In the months leading up to the death of Kamehameha in May of 1819, his son Liholiho was named heir apparent and the title of *Kuhina Nui* (Premier) was given to Ka'ahumanu, a high-ranking Maui born chiefess (daughter of Ke'eaumoku and Nāmāhāna) and wife of Kamehameha (Kamakau 1992; Kuykendall 1938). As the *Kuhina Nui*, Ka'ahumanu shared executive powers with the young *ali'i nui* and she willfully exercised those powers which brought about major changes to the socio-religious aspects of traditional Hawaiian society. As custom dictated, following the death of an *ali'i nui* the practice of *'ainoa* (free eating) was permissible and it was the responsibility of the newly appointed *ali'i nui* to reinstate the ancient practices of *'aikapu* (sacred eating). As Kamakau explains:

...the tabu upon free eating was kept up because in old days it was believed that the ruler who did not proclaim the tabu had not long to rule. If he attempted to continue the practice of free eating he was quickly disinherited. It was regarded as an impious act practiced by those along who did not believe in a god. Such people were looked upon as lower than slaves. The chief who kept up the ancient tabus was known as a worshiper of the god, one who would live a long life protected by Ku and Lono. He would be like a ward of Kane and Kanaloa, sheltered within the tabu. The tabu eating was a fixed law for chiefs and commoners, not because they would die by eating tabu things, but in order to a distinction between things permissible to all people and those dedicated to the gods....The eating tabu belonged to the tabus of the gods; it was forbidden by the god and held sacred by all. (Kamakau 1992:222-223)

Following the death of Kamehameha at Kailua on Hawai'i Island, Ka'ahumanu and various high ranking *ali'i* endorsed the overturning of the ancient *kapu* system by failing to reinstate the laws of '*aikapu* and through the public display of male and female *ali'i* eating together. Additionally, Liholiho with the support of Ka'ahumanu ordered the destruction of the *heiau* (temples) and the *ki'i* (idols) (Kamakau 1992). Their pursuit to promote '*ainoa* over the land was met with resistance from some commoners and chiefs one of which included the *ali'i* Kekuaokalani, who stood behind the ancient practices of '*aikapu*. By December of 1819, Kekuaokalani led his warriors into the battle of Kuamo'o where they were ultimately defeated by the forces of Kalanimoku and Liholiho (Kamakau 1992; Kuykendall 1938). The socio-religious void left by the breakdown of the '*aikapu* was soon filled by eager missionaries who arrived in the Hawaiian Islands just months after its collapse.

# Early Foreign Accounts of the Lahaina/Kā'anapali Region

The Lahaina/Kā'anapali region, "the principal district in Maui, on account of it being the general residence of the chiefs, and the common resort of ships that touch at the island for refreshments" (Ellis 1917:57), was well-documented by early foreign visitors to the Hawaiian Islands. Late 18<sup>th</sup> to early 19<sup>th</sup> century descriptions of the villages and planting areas in and around present-day Lahaina Town indicate a thriving coastal community with extensive gardens of taro (both wet and dry), sweet potato, yams, banana, breadfruit, and *wauke* (Arago 1823; Menzies 1920). Archibald Menzies provided the earliest written description of this area, which he penned in 1793, just 15 years after the arrival of Captain Cook, and twenty-seven years prior to the arrival of the first missionaries to the islands. The descriptions presented by Menzies offer the reader a rare glimpse into life on Maui during this transitional period of Hawaiian history. At the time of Menzies arrival, the *ali i* Kahekili was ruling over both Maui and O'ahu (Menzies 1920). After departing Kealakekua, Hawai'i Island, Menzies landed in Lahaina and provided the following description of the environs:

Having little or no wind, we remained anchored till about noon on the 11<sup>th</sup> when a fresh breeze set in over the low land of the isthmus, with which we immediately weighed and stood for the southwest part of Maui. But as soon as we passed the bay, the high mountains on the western part of the island again intercepted the regular trade and left us with nothing but light and baffling wind till about sunset when we were favoured with a light breeze of the island, and stood on till we came opposite to a village called Lahaina, near the west end of the island, and at a late hour anchored over a bottom of coarse sand in a moderate depth of water about a mile from the shore, which was a low, sandy beach. (Menzies 1920:102)

After arriving in Lahaina, Menzies accompanied by a small group of men made a two-day trip to the mountains to collect plants. His descriptions of his travels read as follows:

When our intentions were made known to the king, he immediately ordered Kamauoha, the chief of Lahaina, and his own son, a boy of eleven or twelve years old, named Toowhennee, to accompany us with a suitable number of attendants to carry provisions and every other necessary we might want. (ibid.:104)

We landed about noon, a little to the eastward of the village, and directed our course up the country for a deep woody chasm in the mountains by a gentle named ascent, which was rather fatiguing in the heat of the day, but a refreshing breeze with which we were favored enabled us to sustain it. The track we now travelled over was pretty clear of large stones and the soil was of a reddish clayey texture, but it was so parched from its southern exposure to the powerful heat of the solar rays that it was cracked and fissured in every direction, and seemed from its scorching and shrivelled produce of grass and herbage to be incapable of any kind of cultivation. We made no stop till we gained the edge of the forests which was about three miles from the seaside, where we found a small village consisting of a few houses. (ibid.)

After arriving at the small village, the party feasted and Menzies, enraptured by the innovative transformation of the parched, rugged district into a flourishing landscape, describes the careful cultivation before him:

Here our conductors importuned us to dine, and a pig being killed and got ready, together with yams and sweet potatoes, we partook of a hearty meal, after which we continued our journey, and soon entered the verge of the woods where we observed the rugged banks of a large rivulet that came out of the chasm cultivated and watered with great neatness and industry. Even the shelving cliffs of rocks were planted with esculent roots, banked in and watered by aqueducts from the rivulet with as much art as if their level had been taken by the most ingenious engineer. We could not indeed but admire the laudable ingenuity of these people in cultivating their soil with so much economy. The indefatigable labor in making these little fields in so rugged a situation, the care and industry with which they were transplanted, watered and kept in order, surpassed anything of the kind we had ever seen before. It showed in a conspicuous manner the ingenuity of the inhabitants in modifying their husbandry to different situations of soil and exposure, and it was with no small degree of pleasure we here beheld their labor rewarded with productive crops (ibid.:105)

After a failed attempt at crossing over the West Maui mountains, the party returned to the coast where Menzies wrote the following descriptions of the agricultural features and the royal residence that he observed:

March 17<sup>th</sup>. On the forenoon of the 17<sup>th</sup>, I accompanied Captain Vancouver and a party of the officers, with the two Niihau women, to see the village of Lahaina, which we found scattered along

shore on a low track of land that was neatly divided into little fields and laid out in the highest state of cultivation and improvement by being planted in the most regular manner with the different esculent roots and useful vegetables of the country, and watered at pleasure by aqueducts that ran here and there along the banks intersecting the fields, and in this manner branching through the greatest part of the plantation. (ibid.:112)

These little fields were transplanted in a variety of forms, some in rows, in squares, in clumps and others at random; some according to their nature were kept covered with water, while others were with equal care kept dry by gathering the earth around them in little hills. In short, the whole plantation was cultivated with such studious care and artful industry as to occupy our minds and attention with a constant gaze of admiration during a long walk through it, in which we were accompanied by a numerous group of natives that continued very orderly and peaceable the whole time. On our coming near the king's house, the greatest part of them separated from us, particularly the women, on account of the ground round it being tabooed. The royal residence was sheltered with spreading trees and cocoa-nut palms situated near some beautiful fish ponds with which it was more than half surrounded, though they were not all at this time in repair or filled with water. They were so contrived as to be filled or emptied at pleasure or in succession. Here we found Kahekili with some of his chiefs seemingly in deep consultation, seated under the shady trees in from of his house. (ibid.:112-113)

Captain George Vancouver also presented his own account of the coastal area:

The village of Raheina is of some extent towards the north-west part of the roadsted. It seemed to be pleasantly situated on a space of low or rather gently elevated land, in the midst of a grove of bread-fruit, cocoa-nut, and other trees. To the eastward the country seemed nearly barren and uncultivated, and the shores were bounded by a reef, on which the surf seemed to break with so much force as to preclude any landing with our boats. In the villages the houses seemed to be numerous and to be well inhabited. A few of these natives visited the ships; these brought but little with them, and most of them were in very small miserable canoes. These circumstances strongly indicated their poverty, and proved what had been frequently asserted at Owhyhee, that Mowee and its neighboring islands were reduced to great indigence by the wars in which for many years they had been engaged. (Vancouver in Fornander 1880:250–251)

Jacques Arago (1823), a French artist who traveled aboard the ship *Uranie* on an expedition commanded by Captain Freycinet, provides a description of Lahaina Region as it appeared in 1819:

The environs of Lahaina are like a garden. It would be difficult to find a soil more fertile, or a people who can turn it to greater advantage; little pathways sufficiently raised, and kept in excellent condition, serve as communications between the different estates. These are frequently divided by trenches, through which a fresh and limpid stream flows tranquilly, giving life to the plantations, the sole riches of the country. Hollow squares of the depth of two, three, and sometimes four feet, nourish various sorts of vegetables and plants; amongst which we distinguish the Caribee-cabbage, named here *taro*; double rows of banana, bread-fruit, cocoa-nut, *palma-christi*, and the paper-mulberry trees, intercept the rays of the sun, and allow you to walk at mid-day. Every cabin has its enclosure, and every enclosure is well taken care of; it seems to suffice for the wants of the family. Here the father turns the ground with his long staff of red or sandal wood; there, the son clears the soil of weeds, and prepares the dinner; farther off the mother is seated at the door of her hut, and weaves the stuff which she clothes herself; whilst her youthful daughter, unencumbered with drapery, is seated by her side, and tempts you by her unsophisticated caresses.

The space cultivated by the natives of Lahaina is about three leagues in length, and one in its greatest breadth. Beyond this all is dry and barren; everything recalls the image of desolation. Nevertheless, the soil and its resources are the same; whence therefore this apparently culpable neglect? It is a natural consequence of the mode of reasoning adopted by these people; they have all that is necessary at hand, what advantage would there be in seeking superfluities from afar?....Superfluities are thrown away on these people. Twenty acres of land will not produce them a better dinner than their square of *taro*. It is so rare to see ships put in here, that the hope of their arrival, and the ennui of disappointed expectation, would more than counterbalance all the advantages which they might procure by bartering. (Arago 1823:119)

The arrival of foreigners to Hawai'i signified the beginning of drastic changes to the culture and economy. Near the end of the 18<sup>th</sup> century, Kamehameha I had become deeply engaged in China's sandalwood trade, which brought numerous sailing vessels and foreign goods into the port of Lahaina, as well as to the other islands. On Maui, the Lahaina/Kā'anapali region was at the center of the lucrative sandalwood trade—a trade that greatly benefitted the king, but was terribly destructive to the '*āina* (land) and the *maka 'āinana* (commoners) alike. The introduction of this industry shifted the focus of the *maka 'āinana* from cultivating the land to working exclusively on filling the coffers of the *ali 'i* with the prized Hawaiian sandalwood (Kuykendall and Day 1976; Oliver 1961). The devastation caused by the sandalwood trade left entire forests throughout West Maui badly depleted and many chiefs, including his son Liholiho (Kamehameha II), in debt to sandalwood traders. By 1830, the sandalwood trade was no longer profitable, and the entire industry had collapsed (Lahaina Restoration Foundation 1972). As the sandalwood trade ceased, Lahaina continued to experience an influx of foreigners. Some of these foreigners came to preach the Christian gospel, while other temporary residents like whalers saw the area as merely a stopping and provisioning port. Following the death of Kamehameha I, under the reign of Kauikeaouli (Kamehameha III), Lahaina served as the capital of the government of the Hawaiian Kingdom from 1820 to 1845(Pukui et al. 1974). The following paragraphs provide a brief sketch of early missionary endeavors and industries in Lahaina during this time.

# Arrival of the First Protestant Missionaries to West Maui

In March of 1820, the American Brig *Thaddeus* carrying the first group of Protestant missionaries landed off of the Kona coast on Hawai'i Island and by May of 1823, they began introducing the gospel to the people of Lahaina (Ellis 1917; Gulick and Gulick 1918). Some of the first missionaries to arrive in the Lahaina area were Reverend Stewart, Reverend Richards, Mr. Loomis, and their families. Several chiefs including Kalanimoku requested that a mission station be established at the main port center of Lahaina (Bingham 1848). Although Lahaina and Wailuku were later established as centers for the mission, Bingham (1848:503) reports that sometime around the mid-1830s "houses of public worship" were built at Lāna'i, Olowalu and Kā'anapali. In May of 1841, missionary Ephraim W. Clark (1841:1), provided the following description about the mission outpost and the creation of a church in Kā'anapali:

An out station at Kaanapali has been maintained for 8 or 10 years. Since my residence at Lahainaluna, the principal care of this station has devolved on me. The distance from Lahainaluna is about 7 miles by the <u>mauka</u> road. The distance from Lahaina is about  $\frac{1}{2}$  of a mile more.

A good dobie meeting house was completed about four years ago. A dobie school house has since been built, & a dobie house for the teacher with a room for the temporary accommodations of the missionary who supplies the pulpit. These have all been built by the people with the exception of the doors & windows of the dwelling house.

...On Mr. Dibble's return to Lahainaluna in June last, I resumed regular preaching at Kaanapali, which has been maintained during the year. The usual audience in the fore noon (!) has been about 500. The labors of the sabbath have consisted of two sermons, a Bible class & occasional meetings with the church & with inquirers.

Until the past year most of the church members residing at Kaanapali have been connected with the church at Lahaina. During the past year, it has been through best to form a church in this place, as it was very difficult of Mr. Baldwin to perform the duties of a pastor towards them, while they were under the special care & instruction of another.

The following year, Clark had reported that the walls of the "dobie" church had given way during the rainy season and that the construction of a new church had commenced. In addition to reporting on the activities of the church, Clark also reported on the population and gave an estimate of some 1,500 inhabitants living in the Kā'anapali area. In describing the living conditions of the people of the district, Clark (1841:1) commented that "the district is not well supplied with water except in the rainy season. Kalo, therefore, is not abundant, & the people are generally poor."

#### Creation of the Lahainaluna Seminary

Over the course of the next decade, these early missionaries worked to garner the support of the *ali*'*i*, and on September 5, 1831 they opened the doors of the Lahainaluna Seminary for boys and young men located roughly two miles *mauka* of Lahaina town (south of the current study area) on land donated by the Chiefess Hoapiliwahine, the wife of Maui Governor, Hoapili (Lahainaluna School 1970). With Reverend Lorrin Andrews appointed as the principal, the first twenty-five pupils began studying arithmetic, writing, geography, natural history, astronomy, mathematics, scriptural history, and theology, as well as learning various trade skills such as farming, carpentry, surveying, printing, and navigation (ibid.). Lahainaluna was the first western-style secondary school located east of the Rocky Mountains and

its prestige attracted many native students from across the islands, some of whom later became prolific writers, historians, and politicians, such as David Malo and Samuel Kamakau. Hiram Bingham, who arrived in Hawai'i with the first group of Protestant missionaries, sketched the seminary (Figure 34) and wrote a brief overview of its early history:

The Mission Seminary at Lahainaluna, established in 1831 for self-supporting students, assumed, from the 23d of July, 1837, the form of a boarding-seminary for children from seven to twelve, and youth from twelve to twenty years of age.

The principal building has been enlarged and greatly improved, and furnished with apparatus by the Board. A printing office, and comfortable habitations for the families of three ordained teachers and an assistant, have been added from the same source. The establishment, including the dormitories of more than a hundred students, form a village of some interest.

Mr. Andrews having been principal of the seminary about ten years, reigned in 1841, and subsequently entered the service of the government, as a judge...In 1842 it contained 107 pupils, and up to that period, it has sent for a number of valuable classes, of which 144 members were then living... (Bingham 1848:581)

A theological class of six members in this seminary was placed under the tuition of Rev. S. Dibble, in 1843, but his early death occasioned a vacancy in that department of instruction which has not been constantly supplied. In 1844 the number of students was 131. Twenty-eight were graduated, each giving pledge to refund to the institution twenty dollars for each year's board and tuition, unless their useful labors as teachers of their countrymen should be deemed by the faculty an equivalent in the cause of the mission. (Bingham 1847:581–582)

Figure 34. "Mission Seminary at Lahainaluna" (Bingham 1848:581).

With the increasing number of students, the Lahainaluna Seminary continued to expand its campus and in 1834 constructed the Hale Pa'i, where the first Hawaiian language newspaper *Ka Lama Hawai'i* was printed. The missionaries that came to Lahaina did so with the intent to stay. However, the wave of whalers that arrived in the district came only for temporary residency and to seek spontaneous pleasures. The following paragraph provides a brief sketch of Lahaina's whaling history.

# The Whaling Industry in Lahaina

As the main port in the Hawaiian Islands, Lahaina was also a focal destination for early 19<sup>th</sup> century whaling vessels (Figure 35). The influx of whalers started around 1820 after "whaling fleets from Nantucket, New Bedford, and other New England ports quickly fished out the portions of the Atlantic Ocean from which they could harvest a profitable prey" (Lahaina Restoration Foundation 1972:8). In 1822 there were approximately thirty-four American whaling vessels in the Hawaiian Islands. Since the whalers hunted throughout much of the Pacific, Hawai'i's geographical placement made it even more attractive to the whalers as an advantageous place for repairs and provisions and as a refuge during the stormy North Pacific winter months. By the 1850s, the peak year of whaling brought in some 549 ships carrying hundreds of seamen to the small town of Lahaina (ibid.). Although whaling promoted a new economy for the Lahaina/Kāʿanapali region and the greater Hawaiian Kingdom, the disorderly whalers that arrived were known for their disruptive conduct and actively resented "…any efforts to control their behavior…" (ibid.:9). This often resulted in conflict with local missionaries and the area residents. Nonetheless, the mass influx of whalers brought unprecedented prosperity as "every ship that dropped anchor before Lahaina was in need of provision" including freshwater, food, cloth, fishhooks, which were sourced from local fishers and farmers, and sextants, chronometers, hardware, and crockery (ibid.:10-11).

Figure 35. Thurston's depiction of Lahaina as seen from Lahainaluna Seminary, ca. late 1830s.

In 1841, Charles Wilkes, commander of the U.S. Exploring Expedition traveled to Lahaina and estimated the population of the area at "about three thousand inhabitants" (Wilkes 1845:250). By the time of Wilkes' arrival, Lahaina had become a bustling port town for whalers who often docked for short durations to restock their ships:

Lahaina being the great resort of our whalers in these islands, a survey was made of the roadstead. The chief reason for resorting to this place is, that their crews are more easily kept in order, and have not that temptation to visit the shore that is experienced at Honolulu; besides provisions are in greater plenty, particularly potatoes, which are raised in abundance on the highlands of Maui. (Wilkes 1845:250)

Between 1848-1853, an American whaler named Edward Perkins made a tour of the South Pacific and made his way to Lahaina. While there, Perkins penned his observations and interactions with the native people and their language, much of which was done in considerable detail. By the time of his arrival, Perkins (1854:93) described Lahaina as "the principal town of Maui, and the second of importance in the kingdom," indicating that Lahaina was no longer operating as the capital for the Hawaiian Kingdom government. He also completed a drawing (Figure 36) of Lahaina Town which he titled "Rear View of Lahaina." Perkins' also penned the following description of the lands in the vicinity of the town:

Like, as it were, an oasis in the desert, it extends for nearly two miles along the shore, a luxuriant garden, having an average breadth of nearly half a mile. The site of the town is perfectly level, with a slight elevation above the sea. In the rear, and on either side, there is hardly tree or shrub to relieve the barren aspect. (Perkins 1854:93)

The stores and dwellings of foreign residents, scattered along the shore, form a pleasing contrast to the grass houses of the natives, situated amid groves, and grouped near the water's edge. In the rear,

at a much greater elevation, and some what to the right, two deep valleys give a pleasing effect to the landscape, their sides clothed with a dense growth of trees and underwood, and their bottoms watered by streams foaming over rocky beds, irrigating the inclined plane to a considerable extent, until absorbed by the thirsty soil. During the rainy season, they become torrents, and empty into the sea. On the mountain-side to the left, the white mission residences of Lahainaluna, with the steepled Seminary, afford an agreeable relief to the eye; beyond, the mountain summits are clothed with forest, and frequently enveloped in clouds. The soil of Lahaina has a reddish tinge, and is of clayey consistency. According to the seasons, it is alternately dry and muddy; and during the summer months, when there is a long absence of rain, the whirlwinds that come sweeping down the valleys carry the dust in clouds far out to sea. (ibid.)

Figure 36. Overlooking Lahaina town with whaling ships docked in the bay, ca. 1849 (Perkins 1854:94)

The development and economic growth of Lahaina/Kā<sup>4</sup> anapali region during the late 18<sup>th</sup> and early 19<sup>th</sup> centuries were made possible because of the vast wet and dryland gardens and supporting water infrastructure systems that were already in place for many centuries prior. When these early visitors arrived, what they encountered and what is reflected in their descriptions suggest that by this time, the main port town of Lahaina was the most densely populated coastal area with additional inland habitations—an area that is also described as extensively cultivated.

# The Celebrated Agricultural Landscape of the Lahaina/Kā'anapali Region

The rich assemblage of oral traditions and early historical accounts recorded for the Lahaina/Kā'anapali Region indicate the presence of a thriving coastal community with numerous chiefly centers surrounded by extensive gardens of taro (both wet and dry), sweet potato, yams, banana, breadfruit, and *wauke* (Arago 1823; Menzies 1920). Of all the staple crops planted in the area, the '*ulu* (breadfruit) groves are some of the most well-described. With respect to the proliferation of '*ulu*, Kakaalaneo, one of the chiefly brothers of Maui, is credited with planting an extensive groves of '*ulu* throughout the Lahaina District (Fornander 1880). These famed '*ulu* groves have been chronicled in many songs, chants, '*ōlelo no 'eau* (Hawaiian proverbs), and historical accounts. In her book '*Ōlelo No 'eau Hawaiian Proverbs and Poetical Sayings*, Pukui lists several proverbs describing the breadfruit groves in the district:

Hālau Lahaina, malu i ka 'ulu.
Lahaina is like a large house shaded by breadfruit trees. (Pukui 1983:53)
Hua 'i ka 'ulu o Lele i ka makani Kona.
The breadfruit of Lele is exposed by the Kona wind.
Hidden matters are exposed in time of anger. When the Kona wind blows, the leaves of the trees are blown off to expose the fruit (ibid.:119).

Lahaina, i ka malu 'ulu o Lele. Lahaina, in the shade of the breadfruit trees of Lele. The old name for Lahaina was Lele. (ibid. 209)

While historical literature credits the chief Kakaalaneo with establishing the 'ulu groves, legendary accounts give credit to Kapo, one of Pele's sisters. Inez Ashdown (1976) explains that Pele and Kapo left their homeland, Kahiki to escape the wrath of their older sister, Nāmaka'okaha'i. Legend has it that Kapo brought with her an 'ulu plant, which she placed near Mokuhinia River (known today as Ka Malu 'Ulu O Lele Park) in Lahaina. The place where Kapo planted her sacred tree became known as Kapo Ulu. According to Ashdown (ibid. 26) "From this tree hundreds of others grew..."

Legendary accounts indicate that the famed 'ulu groves of Lahaina were threatened when Kakaalaneo's impish son Kaululaau nearly uprooted all the trees in Lahaina. According to Fornander's (1916–1917) version of the story, Kaululaau and his boy companions would climb the 'ulu trees in Lahaina to collect the fruits. After a while, the fruits became fewer and beyond the reach of the boys, so Kaululaau uprooted the trees to get at the remaining fruits. Fornander (ibid.:486) writes that "This was done so often that the trees became scarce in the district of Lele." The chief Kakaalaneo took pity on the people, realizing that his son's actions would eventually cause the people to go hungry. The chief ordered all the boy's companions to return home, believing that this would make his son less mischievous. However, Kaululaau's actions only grew worse. Fed up with his wayward son, Kakaalaneo banished the boy to Lāna'i, an island filled in the old days by malevolent spirits that took their victims at night. Because Lāna'i was inhabited by so many spirits, people could not live on the island lest they be killed and eaten. Kaululaau, however, was guided by a friendly spirit to a secret cave, one that he retreated to nightly when the malicious spirits were about. Day after day, Kaululaau deceived the spirits, sending them in every which way. It is said that Kaululaau deceived the evil spirits so often that they became overworked and most of them died off. After the spirits had died off, Kaululaau kept a fire burning, which caught the eye of his father, who then sent his retainers to investigate its source. To the retainers' surprise, Kaululaau was alive and after Kakaalaneo received word of this, he sent for his son who returned to Maui where his behavior improved and he later joined his father's royal court.

Another version of the story of Kaululaau is presented by Ashdown (1976). Ashdown's version tells of Kaululaau uprooting all but three trees, which escaped by flying. The first tree located itself *mauka* of Waine'e Church and that the *ali'i* named it 'Ulu O Lele (Breadfruit of Lele). The second tree flew and located itself near the corner of Chapel and Prison Road. Prisoners were allegedly taken to this tree for execution, thus the name Ka 'Ulu Kauheana, which Ashdown (ibid.:6) translates as "Tree of Execution." Ashdown reports that these trees were destroyed, however, the first by a cane fire and that the second by being cut down when the road was built. The third tree, which Ashton contends was still flourishing in 1976, flew to the spot near the Japanese Methodist Church. This tree became known as 'Ulu Puloa because its fruit was elongated. Obeying the commands of the chief, the native residents purportedly took saplings from the grove known as Ulu O Lele and planted them all over the area.

These 'ulu groves were also described in the historical literature by Hawaiians and visitors alike. Hawaiian scholar and historian, John Papa ' $\overline{I}$ ' $\overline{1}$  (1959:109) gave an account of the breadfruit groves of Lahaina sometime around 1812. He writes, "[i]t was wonderful to see the breadfruit and coconut groves of Lele, thriving from one end to the other." Another account was given in 1819 by French artist and explorer Jacques Arago (1823). Arago described the arrangement of various cultivated plants he observed growing in the Lahaina region (see full quotation above on page 37).

On May 4<sup>th</sup>, 1825, Lord Byron, commander of the *H.M.S. Blonde*, gave a description of the breadfruit trees that he observed while stopped at Lahaina. Byron and his crew had come to Hawai'i to return the bodies of the *ali'i* Liholiho (Kamehameha II) and his wife Kamāmalu to Honolulu after dying in London of the measles. After leaving Hawai'i Island, the crew made their way towards Lahaina and upon anchoring, Byron wrote:

...we discovered the double-hilled Maui, and coasted along it almost all day, that we might reach the harbour of Lahaina, which is in the most populous and fertile district of the Island... About six P.M. we anchored close to the shore in Lahaina bay... It was very beautiful: groups of trees grow down close to the sea, and many of them, by the novelty and beauty of their foliage, delighted us: there was the breadfruit mingled with the cocoa nut; the elegant and useful kou; the bananas; the wauti, of which native cloth is made; the ohia and the sugar-cane; all in gay and rich confusion, approaching very closely to the white surf which breaks constantly on the beach. ...(Byron 1826:103–104)
Throughout the 20<sup>th</sup> century, the '*ulu* groves of Lahaina continued to inspire visitors to the district, including a late 19<sup>th</sup>-century Hawaiian composer named Lot Kauwe. While traveling from Honolulu to Hawai'i Island via the steamship *Maunaloa*, Kauwe composed the song *He Aloha Nō* 'O Honolulu (Goodbye to Honolulu). The first verse of the song describes Kauwe's departure from Honolulu and his observation of Lahaina's breadfruit groves. Kauwe's lyrics read:

He aloha nō 'o Honolulu	Goodbye Honolulu
I ka ua Kūkalahale	In the Kūkalahale rain
Ka nuku a 'o Māmala	Māmala, the entrance of Honolulu Harbor
'Au a 'e nei mahope	Lies behind
Kau mai ana mamua	Ahead
Ka malu 'ulu a 'o Lele	The shady [breadfruit] grove of Lele
Kukui 'a'ā mau	Lighthouse is always burning
Pio'ole i ke Kaua'ula	And not extinguished by the Kaua'ula rain
	(Kanoa-Martin 2018)

While the Lahaina/Kā'anapali Region is celebrated in traditional lore for its expansive '*ulu* groves, 20<sup>th</sup> century historical accounts also describe the coastal plains from Kīhei, located south of the study area to Honokahua located to the north, as having supported extensive fishing villages with productive sweet potato grounds. In interpolating early historical descriptions Handy (1940:159), who was writing about this region during the 1930s related the following:

On the south side of western Maui the flat coastal plain all the way from Kihei and Maalaea to Honokahua, in old Hawaiian time, must have supported many fishing settlements and isolated fisherman's houses, where sweet potatoes were grown in the sandy soil or red *lepo* near the shore. For fishing, this coast is the most favorable on Maui, and, although a considerable amount of taro was grown, I think it is reasonable to suppose that the large fishing population which presumably inhabited this leeward coast ate more sweet potatoes than taro with their fish. Almost no sweet potatoes are planted in this section now, however, which is partly due to the displacement of Hawaiians by Orientals on the industrialized sugar and pineapple plantations.

Although Handy (1940) did not personally investigate the Honokōwai area, he did report on responses he received from David Thomas Flemming, the man responsible for introducing pineapple to Maui. In describing the agricultural features of Honokōwai, and the adjacent valleys of Kahana, Honokahua, and Honolua, Handy (ibid.) reported the following:

In all three valleys which you mentioned—Honokowai, Honokohua [*sic*] and Honolua, a well as Kahana, there was considerable taro raised in olden times; as a matter of fact, a great deal was raised in Honokowai, where there must have been 30 or 40 acres under cultivation at one time. A detailed map of the *kuleanas* in that valley is available, and a fairly accurate estimate of the area could be made from that. Honokohua [*sic*] did not have much taro land, but Honolua and Kahana had several acres each. (ibid.:106)

### The Legacy of the Māhele 'Aina of 1848

By the mid-19<sup>th</sup> century, the ever-growing population of Westerners in the Hawaiian Islands forced socioeconomic and demographic changes that promoted the establishment of a Euro-American style of land ownership. By 1840 the first Hawaiian constitution had been drafted and the Hawaiian Kingdom shifted from an absolute monarchy into a constitutional government. Convinced that the feudal system of land tenure previously practiced was not compatible with a constitutional government, the  $M\bar{o}$  '7, Kauikeaouli, and his high-ranking *ali* '*i* (chiefs) decided to separate and define the ownership of all lands in the Kingdom (King n.d.). The change in land tenure was further endorsed by missionaries and Western businessmen in the islands who were generally hesitant to enter business deals on leasehold lands that could be revoked from them at any time. After much consideration, it was decided that three classes of people each had one-third vested rights to the lands of Hawai'i: the ( $M\bar{o}$  '*ī*) monarch, the (*ali* '*i*) chiefs and *konohiki* (land agents), and the *maka* '*āinana* (common people or native tenants).

In 1845 the legislature created the Board of Commissioners to Quiet Land Titles (more commonly known as the Land Commission), first to adopt guiding principles and procedures for dividing the lands and granting land titles, and then to act as a court of record to investigate and ultimately award or reject all claims brought before them. All land claims, whether by chiefs for entire *ahupua* 'a or by tenants for their house lots and gardens, had to be filed with the

Land Commission within two years of the effective date of the Act (February 14, 1848) to be considered. This deadline was extended several times for the *ali i* and *konohiki*, but not for commoners (Alexander 1920).

The Mo 'i and some 245 ali'i (Kuykendall 1938) spent nearly two years trying unsuccessfully to divide all the lands of Hawai'i amongst themselves before the whole matter was referred to the Privy Council on December 18, 1847 (King n.d.). Once the Mo 'i and his ali'i accepted the principles of the Privy Council, the Mahele 'Aina (Land Division) was completed in just forty days (on March 7, 1848), and the names of all of the *ahupua* 'a and 'ili kūpono (nearly independent 'ili land division within an ahupua 'a) of the Hawaiian Islands and the chiefs who claimed them, were recorded in the Buke Māhele (Māhele Book). As this process unfolded the Mo 'ī, who received roughly one-third of the lands of Hawai'i, realized the importance of setting aside public lands that could be sold to raise money for the government and also purchased by his subjects to live on. Accordingly, the day after the division when the last chief was recorded, the  $M\bar{o}$  ( $\bar{c}$  commuted about two-thirds of the lands awarded to him to the government (King n.d.). Unlike the Mo 'ī, the ali 'i and konohiki were required to present their claims to the Land Commission to receive their Land Commission Awards (LCAws.). The chiefs who participated in the Māhele were also required to provide commutations of a portion of their lands to the government in order to receive Royal Patents that gave them title to their remaining lands. The lands surrendered to the government by the Mo 'ī and ali 'i became known as "Government Land," while the lands that were personally retained by the  $M\bar{o}$  '7 became known as "Crown Land," and the lands received by the ali'i became known as "Konohiki Land" (Chinen 1958:vii, 1961:13). The lands claimed during the Māhele were identified by name only, with the understanding that the ancient boundaries would prevail until the land could be formally surveyed, and all of the lands were "subject to the rights of the native tenants" therein (Garavoy 2005:524). Finally, all lands awarded during the Māhele.

#### Disposition of the Lands of Honokowai During the Mahele 'Aina of 1848

Prior to the *Māhele 'Āina* of 1848, the lands of Honokōwai Ahupua'a passed from Kamehameha I to Ke'eaumoku to Kahekili Ke'eaumoku (also known as George Cox), a former governor of Maui. Upon Kahekili's death in March of 1824, these lands came under the control of his younger brother, John Adams Kuakini, who served as the Governor of Hawai'i Island during the 1820s, and as the Governor of O'ahu between 1831 and 1832 (Kamakau 1992; Kame'eleihiwa 1992). According to Kamakau (1992), both Kahekili and Kuakini, who had learned to read and write in English, developed many close relationships with foreigners living in the Hawaiian Islands, some of whom came to live within their land holdings. Kuakini's close association with a particular foreigner living on Maui is evident in his distribution of some his Honokōwai lands to a man named John Pervier in 1840. These lands, subsequently awarded to Pervier during the *Māhele* as a Land Commission Award (LCAw. 327B), were described in a deed dated January 6, 1840, signed by both Kamehameha III (Kauikeaouli) and Kuakini, as follows:

Both Kamehameha III and Kuakini give in perpetuity to John Previer a piece of land in Honokōwai named Waihale and his house lot too in Wainalu. It is to John Previer that the land and the house lot belongs and for his Hawai'i born heirs to hold forever, and [the land] shall not be given to a foreigner from another land. We are giving all the rights attached to this land and house lot, since antiquity. (translated from the Native Register for LCAw. 3274B by L. Brandt)

When Kuakini died in 1844, he bequeathed his lands and position to his *keiki hānai* (adopted child) William P. Leleiohōkū, who was the brother of the chiefess Mikahela, also known as Miriam Kekau'ōnohi, who eventually laid claims to several tracts of land in Honokōwai. Kekau'ōnohi was a Lahaina born high chiefess and the great-granddaughter of Kekaulike, king of Maui (Kamakau 1992; Kame'eleihiwa 1992).

The distribution of lands from one chief to the next was a key component of traditional politics that had been adapted to meet the demands of the islands' changing political-economy. While in some aspects, the 1848 *Māhele* mirrored the traditional land division system, it differed significantly in that it allowed the chiefs to own land in fee simple—a concept that until this time had not been practiced in the islands. In following elements of the traditional land division process, at the beginning of the 1848 *Māhele*, all lands reverted to the  $M\bar{o}$  ' $\bar{i}$ , Kauikeaouli (Kamehameha III) who either laid claim to or relinquished his interest in a certain land so that it could be claimed by a lesser chief. At the time of the 1848 *Māhele*, Kauikeaouli, claimed the roughly 4,000-acre Honokōwai Ahupua'a as part of his personal lands, thereby establishing Honokōwai as part of the Crown Lands inventory (Iaukea 1894; Van Dyke 2008). Honokōwai was one of thirty-five lands (totaling 69,121 acres) on the island of Maui that were personally claimed by Kauikeaouli. Of these lands, four were within the Kā'anapali District and fifteen were within the adjacent district of Lahaina (Buke Mahele 1848; Van Dyke 2008).

While Kauikeaouli claimed Honokōwai Ahupua'a, the chiefess Mikahela Kekau'ōnohi laid claim to the '*ili* of Mo'omuku which was awarded to her on June 19, 1852 as LCAw. 11216. This nearly 300-acre '*ili* consists of four distinct *lele* (detached land sections), of which *lele* 3, containing a little more than 20 acres, is included within the

planned Honokōwai Community; two smaller *lele* of Mo'omuku (1 and 2) are located *makai* of the study area at the coast, and the largest section *lele* 4, containing 280 acres) is situated *mauka* of the study area. As an *ali'i* award, Kekau'ōnohi was required to submit a Native Register and supporting testimony, however, there are no details in these documents that describe land use activities for this time period.

#### Kuleana Claims within Honokowai Ahupua'a

As the King and chiefs made claims to large tracts of land during the 1848 Māhele 'Aina, questions arose regarding the protection of rights for the native tenants. To resolve this matter, on August 6, 1850, the Kuleana Act or Enabling Act was passed, clarifying the process by which native tenants could claim fee simple title to any portion of lands that they physically occupied, actively cultivated, or had improved (Garavoy 2005). The Kuleana Act also clarified access to kuleana parcels, which were typically landlocked, and addressed gathering rights within ahupua 'a. Lands awarded through the Kuleana Act were, and still are, referred to as kuleana awards or kuleana lands. The Land Commission oversaw the program and administered the kuleana as Land Commission Awards (LCAws.) (Chinen 1958). Native tenants wishing to make a claim to their lands were required to register in writing those lands with the Land Commission, who assigned a number to each claim, and that number (the Native Register) was used to track the claimant through the entire land claims process. The native tenants registering their kuleana were then required to have at least two individuals (typically neighbors) provide testimony to confirm their claim to the land. Those testimonies given in Hawaiian became known as the Native Testimony, and those given in English became known as Foreign Testimony. Upon provision of required information, the Land Commission rendered a decision, and if successful, the tenant was issued the LCAw. Finally, to relinquished any government interest in the property, the holder of a LCAw. obtained a Royal Patent Grant from the Minister of the Interior upon payment of the commutation fee. The information recorded in the Native Register and Native and Foreign Testimony provides insight into land use and settlement patterns around the time of the Māhele.

Within Honokōwai Ahupua'a, the Land Commission awarded some 187 distinct parcels of land totaling 1,119.32 acres as *kuleana*. As shown in Figure 37, the majority of the *kuleana* awards within Honokōwai were distributed along the length of Honokōwai Stream, as well as along the coast. This distribution pattern suggests that the well-watered valley floor was extensively cultivated and that the coastal area was densely settled. The concentration of *kuleana* awards along the valley floor also indicates that this valley was an important agricultural center. Portions of the *kula* lands located beyond the southern boundary of the study area were also awarded as *kuleana* to a few native tenants and a few foreign residents, namely William Shaw, John White, and John Previer. Within the current study area, seven LCAw., comprising roughly 8.97 acres, were awarded to seven native tenants of the land, all of whom received lots in other parts of Honokōwai as well. Table 2 lists the seven *kuleana* awards within the study area. The locations of those awards, relative to the study area boundaries, are depicted in Figure 37.

Awardee	LCAw. No.	Acres	Date	<b>R.P.</b> No.	Land Use
Hilahila	3988:3	1.11	1859	4590	kula 'uala
John Previer	327B:4	4.08	1883	7691	kula
Kaaea	4242:3	0.30	1858	4204	kalo field
Kaaha	3925H:1	0.44	1890	7945	kalo & kula 'uala
Kameeui	4249:1	1.85	1862	5174	kula 'uala
Mikahela Kekau'ōnohi*	11216:28.3	20.49	1852	n/a	none described
Pokole	3852:1	1.24	1858	4206	kula 'uala

					•	

\* ali'i-konohiki award

A review of the land documents (i.e. native and foreign testimonies and native register) for those parcels within the current study area indicate that this area was referred to as *kula* lands (plains, open field). According to Lucas (1995:60), the term *kula* distinguished dry-land agricultural areas from irrigated (*lo'i*) taro lands, and also described "the country in the rear of the sea shore," as well as "the region of a mountain near its base…" The land documents specify that the *kula* lands within the current study area were used to cultivate traditional staple crops such as *kalo* (taro) and *'uala* (sweet potato). The land claim documents for Hilahila's award (LCAw. 3988), also make reference to adjacent  $p\bar{o}$  *'alima* parcels, which are defined by Lucas (1995:93-94) as a:

Term used for land farmed by tenants for ali'i one day in five. Later term used for ko'ele or hakuone because tenant was obliged to labor for a chief on Fridays. Payment of a portion of the products of the land held by them to the king as a form of taxation.

Maly and Maly (2007) provide another definition of a po 'alima, stating that it is:

A parcel of land (either a dryland area or wet field), worked on Fridays, in payment of taxes or tribute to chiefly owners of the *ahupua* 'a within which the  $p\bar{o}$  'alima is found.  $P\bar{o}$  'alima lots are often considered to be a part of the Government Land Inventory. (Maly and Maly 2007:104)

While the taxable  $p\bar{o}$  'alima parcels are not exclusive to any one island, they are prevalent on Maui, especially in the more densely populated centers. Participating in the  $p\bar{o}$  'alima workdays was not only an expectation for those living in this area, but it ensured that each person who wished to utilize the area's resources contributed their share to maintaining these resources (Handy and Handy 1991; Maly and Maly 2007). Although *kuleana* awardees often describe these cultivated plots in relation to their parcels, they were not allowed to claim, nor were they awarded  $p\bar{o}$  'alima, as these parcels and their contents were considered the property of the chief. As a consequence of the  $M\bar{a}hele$ , the  $p\bar{o}$  'alima within Honokōwai were retained by the Crown. As the native tenants transitioned from paying their share of taxes in the traditional form of labor and goods to a monetary form, the practice of managing these parcels and participating in the  $p\bar{o}$  'alima workdays eventually ceased.

#### Changes in Land Tenure During the Second Half of the Nineteenth Century

In the decades following the  $M\bar{a}hele \ A\bar{i}na$ , all Crown lands in the Kingdom were administered by the Commissioner of Crown Lands, who oversaw the management of these lands often leased the most productive lands and conveyed the revenues to the Crown. To ensure that the Crown lands of Hawai'i would be maintained by any succeeding monarch, and to prevent any future monarch from willfully disposing of these lands, in 1865, the Supreme Court passed and act that made all Crown lands inalienable, meaning that these lands had to "...descend to the heirs and successors of the Hawaiian Crown forever" (Van Dyke 2008:90). The 1865 statute also required that one fourth of the revenues generated by the Crown lands be used to repay any mortgage interest or bond payment of the king. Between 1865 and 1893, all Crown lands were administered solely at the discretion of the ruling  $M\bar{o}\ \bar{\tau}$  by the Commissioner of Crown Lands. However, there was mounting foreign pressure to make Crown lands available for leasehold and purchase that came to a head in 1893, when American businessmen and sugar moguls backed by the U.S. consul and marines illegally overthrew the Hawaiian Kingdom Government and forced Hawai'i's sovereign, Lili'uokalani to abdicate her thrown (Beamer 2014). This group, consisting of thirteen men who referred to themselves as the Committee of Safety, then anointed themselves as the Provisional Government responsible for the management of the affairs of the Hawaiian Kingdom (Beamer 2014; Van Dyke 2008).

The overthrow of the Hawaiian Kingdom government caused major cultural upheaval and sociopolitical instability, and ultimately altered the way Crown lands were administered. After the overthrow, the Crown lands of Hawai'i were administered by the government, and were no longer passed down a to the heirs and successors of the Hawaiian Crown. In 1894, the Commissioner of Crown lands, Curtis P. Iaukea (1894:29–30), after travelling the islands to examine the economic potential of the Crown lands to generate money for the coffers of the Kingdom, provided the following description of the Crown lands of Honokōwai:

HONOKAWAI—This tract of land is situate on the boundary line between the Kaanapali and Lahaina districts and compares favorably with any of the lands in this locality. Some of the lower sections are suitable for cane, but the remainder of the land is mostly dry grazing. In the valley there is quite an area of good taro land. The government road to Kaanapali crosses the land near the sea. Total acreage is about 4000 acres.

Soon after this assessment, the lands of the current study area began to be developed as part of the burgeoning commercial sugar industry in West Maui. Although the sugar industry was already established in the islands' by this time, the transition to fee simple land ownership, compounded by the drastically changing economy, and the overthrow of the Hawaiian monarch, ultimately led to the rise of a plantation dominated society in West Maui.

## The Rise of the West Maui Sugar Industry

Introduced to Hawai'i by Polynesian settlers,  $k\bar{o}$  (sugarcane) was a fixed element in Hawaiian agriculture that served a variety of important uses. More than 100 varieties of sugarcane were traditionally cultivated in Hawai'i, each with its own name and qualities (Maly and Maly 2007). According to Handy and Handy (1991) sugarcane was a snack, condiment, and famine food. The juice of the cane was also toasted over the fire and fed to nursing babies, and was used to strengthen children's teeth by chewing on it (ibid.:187). It was used to thatch the interior of houses when *pili* grass (*Heteropogon contortus*) or *lau hala* (*Pandanus odoratissimus*) were not abundant (Malo 1903).  $K\bar{o}$  kea (white cane) was the most common variety and was typically planted near Hawaiian homes for medicinal purposes. Another medicinal variety of sugarcane that was planted near to homes was Honua'ula, named for the reddish soil of its namesake *ahupua'a* in south Maui (ibid.). One of the first recorded narrative of the Lahaina/Kā'anapali region that mentions sugarcane comes from British explorer Captain William Robert Broughton, who visited Maui in 1796:

Our excursions on shore were frequent and the natives civil. The cultivation was excellent; and the extent of ground made use of for that purpose reminded us of the scenery of our native country. There were the various productions of taro, sweet potatoes, melons, sugar-cane, gourds, and pumpkins, amidst groves of the breadfruit trees and cocoa-nuts, which universally afforded us shady walking. (The Hawaiian Forester and Agriculturalist 1919:423)

The first sugar mill on Maui was established in Wailuku in 1823. It was not until the mid-1820s, however, when several members of the Lahaina Mission Station began to process sugar from the native varieties of sugarcane for their tables, that the production of sugar in the Lahaina District began. Sugar continued to be processed in small quantities in the Lahaina area throughout the 1830s, and by the 1840s efforts were underway in the district to develop a means for making sugar as a commodity (Maly and Maly 2007). A short article published in the *Agricultural Science* in 1894 describes two varieties of cane, the Lahaina and the Cuban, which were introduced to Maui in 1854 by Captain Edwards, who had acquired them from Tahiti. The Lahaina variety flourished exceedingly well in the arid environment of West Maui. By 1861, the "Ko Lahaina Alahui Hana Ko" (Association of Lahaina Sugar Makers) had been established to benefit "the people who reside there in the shelter of the breadfruit at Lele," including "the sugar planters and the people who own *kuleana* lands" (ibid.:927). The August 9, 1862 edition of *The Friend* (page 58), discussing the transition of the economy of Lahaina from whaling to sugar, reported that:

...The old order of things is rapidly passing away. This idea was most sensibly impressed upon the mind on our landing at Lahaina. For many years, upon an average between one and two hundred whale-ships have visited that port for supplies, while last fall season the number was reduced to fifteen, and last spring to but three! The natural result has been, that every ship chandler has left, and the "land sharks" have departed... The change in Lahaina is very great. It is highly gratifying that those who remain, both foreigners and natives, are resolutely turning their attention to the cultivation of sugar cane, and in a few months the sugar mill will be in successful operation. The land of Lahaina is very rich, and admirably suited to the cultivation of cane. Not only do the non-visits of whale ships affect Lahaina, but all those neighboring localities, from whence supplies were derived for the Lahaina market...(in Maly and Maly 2007:928)

By the end of 1862, when the last of the whaling vessels made call in Lahaina, the Pioneer Sugar Mill, situated south of the study area, had begun to commercially process sugar. For more than a century, the Pioneer Mill Company expanded its operations, transforming the traditional cultural landscape of the Lahaina/Kā'anapali region—including the study area lands in Honokōwai Ahupua'a—into a vast plantation devoted to the production of sugar.

#### The Beginnings of the Pioneer Mill Company (ca. 1860-1899)

The Pioneer Mill Company operated in the vicinity of the study area from ca. 1860 to 1999. During that time, the company grew from a small mule-powered milling operation that ground the crops of independent growers, to one of the largest sugar growers in the Islands, with fields that stretched across the Lahaina-Kā'anapali districts. According to Dorrance and Morgan (2000), the Pioneer Mill Company originally formed as a partnership between James Campbell and Henry Turton. Campbell, who was of Scotch-Irish descent, left Ireland at age 13 and came to Lahaina in 1852, after being shipwrecked in the South Seas and winding up in Tahiti. He worked as a carpenter in Lahaina for ten years, before joining with Turton, a mason, to establish the mill company. The April 18, 1863 edition of *The Polynesian*, describes the early success of the milling operation:

Messrs. Campbell & Turton are entitled to the credit of having initiated the manufacture of sugar in the "second city of the Kingdom," as it used to be called.

Without capital, other than an indomitable energy, they improvised a wooden mill, propelled by mule power, and incited the natives of Lahaina and its environs to plant cane. Through their influence and example, the town of Lahaina now fairly bristles with sugar cane. In fact, from Kaanapali to Oloalu [sic], the low ground is one succession of cane fields. It was once said that whoever makes two spears of grass grow where one grew before, is a public benefactor. How much more are the entitled to the thanks of the Hawaiian public who by their example and energy have aroused the industry of a whole community. The possessors of every little kuleana or patch of kula in and about Lahaina, bring their cane to the mill of these "Pioneers" to be ground and manufactured on shares, and it is an interesting and hopeful sight to observe the native owners of a cart-load of cane watching the great rollers (once made of wood, now of iron), by the aid of a team of miles, crushing the long stalks, while the rich juice runs in a continuous stream through a spout. The quality of sugar made by Messrs. Campbell & Turton is equal to the best we have ever seen from any of the Maui plantations, as we know from personal observation. Messrs. Aldrich, Walker & Co. are their agents in Honolulu. Success to their enterprise! (The Polynesian 1863)

In 1865, Campbell and Turton purchased their first parcel of land from a native resident of Lahaina, and in subsequent years they purchased several other *kuleana* lots (Maly and Maly 2007). In 1866 they then bought a larger parcel of land consisting of the holdings of a number of small cane growers that were acquired and sold to them by Benjamin Pitman.

While the rise of sugar and capitalism in this region was applauded by some, it was seen as a detriment to the native way of life by others (ibid.). In March of 1867 a committee was appointed by the Hawaiian legislature to investigate the cause of a famine in the Lahaina District. The report produced by the committee found that the cause of the diminishing food supply was directly related to the development of the sugar plantations and the resulting abandonment of the traditional subsistence practices. The report states:

... With the arrival of the sugar mills at Lahaina, the men have devoted themselves to planting sugar cane. Thus, many of the people have left the planting of their *Kuleana* lands—the *kalo*, *uala*, *maia*, *uhi*, and such—with expectations that they shall satisfy their hunger by this work. Also, as a result of this work at the sugar plantations, much of the water of the streams has been taken, and the taro lands of the *Kuleana* are dry. They are as if nothing. In the year past, and in this year, there has arisen a great dispute between the Hawaiians and the foreigners, between Hawaiians and Hawaiians, women and their husbands, children and children, about the water. The reason for this dispute, is that the water now goes to the sugar cane, and the taro lands are without.

Also, because so many people have begun to plant sugar cane, a food which once protected (sustained) the people in times of famine has been mistreated.

It is the *ulu* (breadfruit). This food, is a food that was greatly loved by the offspring of Lahaina, who would always glance to the breadfruit trees, looking to see if the breadfruit was ripe, ready to fall to the ground. In that way the children of Lahaina were sustained. But now, with the extensive planting of sugar cane, many of the bread fruit trees have been cut down and the wood become fuel for the mill. . . By my understanding, in ancient times, this cutting down of the breadfruit, would lead to one probably being cast away to some isolated land, just like Kaululaau who was banished to Lanai, because he had cut down the breadfruit trees. . . (in Maly and Maly 2007:932)

The Pioneer Mill Company expanded again in 1874 when Campbell and Turton purchased the Lahaina Sugar Company and the West Maui Sugar Company, vastly increasing their production capacity. In addition to acquiring the lands of these two sugar companies, land records indicate that the Pioneer Mill Company also continued to acquire titles to former *kuleana* lands from native residents of the Lahaina/Kā'anapali region throughout the 1870s (Maly and Maly 2007). Following the signing of the 1875 Treaty of Reciprocity, a free-trade agreement between the United States and the Kingdom of Hawai'i that guaranteed a duty-free market for Hawaiian sugar in exchange for special economic privileges for the United States, commercial sugarcane cultivation and sugar production became the central economic focus of the region. Pioneer Mill's expertise in this field was demonstrated in 1876 when they were awarded a prize for the fine quality of their sugar at the World's Fair International Exhibition held in Philadelphia (Maui Architectural Group 2005). The following year, in 1877, Campbell sold his half interest in the Pioneer Mill Company to Turton, who apparently borrowed money from Hackfeld & Company for the transaction. By 1880, the Pioneer Mill Company owned 4,500 acres of land in and around Lahaina, of which 700 acres were under cultivation and another 700 acres were available for planting; the company also employed 250 workers (Bowser 1880:426). The town of the Lahaina, and the environs of the plantation were described in a visitor's guide to Hawai'i that same year:

The greater part of the town of Lahaina is situated on a level plateau, but the houses also run down quite to the sea beach. There is a fine beach for bathing, and the whole situation of the town is delightful. The large number of mango, breadfruit, tamarind and other trees, with innumerable bananas, which are growing in all parts of the town and around it, give the place a most picturesque appearance. The luxuriance with which these trees grow here I have not seen equaled at any other place in the Kingdom. Mr. Turton's sugar plantation also is quite in the heart of the town. Sugar cane is planted here wherever land can be obtained, a proof of how rich the soil is. The main street of the town is about a mile in length. Altogether, there must be, I think, about 250 houses in the place. There are also a Court-house, Post Office, two or three churches and schools, and about a dozen stores of all kinds. The sleeping accommodation procurable by travelers who have not any introduction to private families is very inferior... by far the best way to travel in this country is to take your own tent and camp outfit, and get a good native attendant to accompany you...

...Lahaina was at one time the most important place in the Kingdom, and virtually its capital. The days of its glory are, however, long since passed. It has suffered from the advance of other places, and also, in common with all the formerly populous parts of the Kingdom, from the lamentable depopulation, which is the most striking feature in the history of the islands since they became known to European nations. . . (Bowser 1880:524)

Roughly 500 gallons of water are required to produce one pound of sugar, and it takes one million gallons of water a day to irrigate one acre of sugarcane (Wilcox 1996). Irrigated fields, however, produce twice as much cane as rain watered fields, so the success and growth of the sugar industry within the arid environment of the Lahaina/Kā'anapali region depended upon an ample supply of irrigation water. The source of water for irrigating the Pioneer Mill Company's fields came from deep within the fertile upland valleys of the West Maui Mountains, and during its early years of operation, the company used aqueducts to supply water from the streams to the fields. Acquiring rights to water for irrigation and expansion of the cane fields (to higher elevations) became the primary focus of the plantation during the mid to late nineteenth century, as demonstrated by the drilling of the mill's initial artesian well in 1883 and the subsequent development and improvement of flumes, ditches, and in later years, tunnels.

In 1882, a new mill was built for the Pioneer Mill Company by the Honolulu Iron Works. The updated mill, included three-rollers and six boilers that generated steam to power the grinding operations (Maui Architectural Group 2005). The company also began to use a steam tramway to transport cane to the mill around this time, and in that same year Henry Turton got permission from the Minister of the Interior to construct a railroad on the plantation. By 1883 the railroad was being used to haul cane to the mill from 600 acres of cultivated lands. Honokōwai Ahupua'a, at the far northern end of the plantation, does not appear to have been cultivated in sugarcane at this time, however.

An 1883 map of the Honokōwai Section of West Maui prepared by S. E. Bishop (Hawai'i Registered Map No. 1196; Figure 38), depicts the environs of the current study area as they would have appeared at that time. The map shows the boundaries of Honokōwai Ahupua'a, with Honokōwai Stream and Gulch running through the middle of the land division, with marsh land indicated at the outlet of the gulch to the south, and at least 20 houses, most within walled lots to the north. What appears to be an enclosure is also depicted further inland, along the south edge of Honokōwai Gulch. Although the map does not show any plantation field infrastructure within the study area, two roadways paralleling the coast are indicated, with the more *mauka* one labeled "Terr. of Hawaii to Pioneer Mill Co. old roadway," and the more *makai* one labeled "Pioneer Mill Co. to Terr. Of Hawaii 50ft Roadway," indicating that the plantation was at least establishing in roads, so to speak, into Honokōwai at this time. Also shown is a 5-acre grant to the Pioneer Mill Co. (Grant No. 4368) located near the southwestern corner of the current study area.

In 1885, Henry Turton declared bankruptcy and sold his interest in the company back to Campbell and Paul Isenberg, who was affiliated with Hackfeld & Company. Then in 1889, Campbell sold his interest in the plantation to C.F. Horner, who along with Isenberg and three others, subsequently reincorporated as "Pioneer Mill Company, Limited." At that time the plantation's assets included 1,000 acres of cane and taro land, 9,500 acres of pasture and forest land, along with 60 oxen, 700 head of cattle, 65 horses and mules, and 30 mares and colts (Maui Architectural Group 2005). It is possible that the Honokōwai lands, which remained unirrigated at this time, were used as pasture during the early years of the plantation.

During the latter part of the 19<sup>th</sup> century, intensive efforts were underway to devise methods of transporting water from the streams of the West Maui Mountains, including Honokōwai Stream, for field irrigation. While the expansion of Pioneer Mill's landholdings and ultimate goal of diverting water for crop irrigation was a crucial contributing element to the overall success of the company, it had the unfortunate effect of diminishing the ability of native tenants to remain on and farm their family lands. Testimony gathered from the 1895 *Pioneer Mill* vs. *Kumuli 'ili 'i et al.* case reveals that by this time a large number of *kuleana* lands containing taro patches had been purchased or were under leased by Pioneer Mill and that "a goodly number of other kalo patches had been abandoned by their native owners, some through disinclination to work them and others through inability to get a sufficient quantity of water to cultivate them profitably" (in Maly and Maly 2007:938). By the end of the 1800s, 16 miles of flumes, along with the steam tramway and railroad, were being used to carry the harvested cane from the Pioneer Mill Company fields to the mill, and by 1898, a semicircular flume of galvanized iron on redwood trestles had been built to draw water from Honokōwai Stream (inland of the current study area at an elevation of 1,525 feet above sea level), and transport it through Honokōwai Ditch to the more southern fields of the plantation located near Lahainaluna (Honolulu Star-Bulletin 1918; Wilcox 1996).

Figure 38. Portion of Hawai'i Registered Map No. 1196 prepared by S.E. Bishop in 1883 showing the Honokōwai Section of West Maui with the current study area indicated (shaded red).

# Pioneer Mill Company and the Current Study Area During the 20th Century

The Pioneer Mill Company continued to expand throughout the early 1900s by developing its land holdings, improving its water resources, and expanding its milling operations (Maly and Maly 2007). In 1902, Pioneer Mill entered into an agreement with Honolua Ranch (to the north of the plantation) to construct a large irrigation ditch, known as the Honokōhau Ditch, that would divert waters from the Honokōhau, Kaluanui, and Honolua streams across the plantation lands (Wilcox 1996). While entirely financed by the Pioneer Mill Company, the ditch was owned and maintained by Honolua Ranch, belonging to H. P. Baldwin. The ditch, which forms the eastern boundary of the current study area (Figure 39) and initially had rock slab side walls, was completed in 1904, finally bringing irrigation water to the *kula* lands of the current study area:

The Honokohau ditch is at last completed and the water was turned on last Saturday. This ditch leads the water from the mountain streams of Honokohau into the Kaanapali lands of the Pioneer Mill Co. of Lahaina. This huge waterway is the private property of Hon. H. P. Baldwin and has been leased (the water and the ditch) by him to the Lahaina plantation for a term of years.

The cost of construction was about \$150,000, J. S. Molony was the engineer in charge of the work. It is estimated that a daily average flow of about ten million gallons will be maintained. The Lahaina people are fortunate in obtaining such an abundant supply of fresh water. It will prove a good investment. (The Hawaiian Gazette 1904)

During the early years, the labor force on the plantation was made up primarily of Hawaiians, many of whom were *kuleana* owners, but the growth of the Pioneer Mill Company soon required additional labor. By the beginning of the 20<sup>th</sup> century, immigrants from China, Japan, Portugal, Korea, Puerto Rico, and elsewhere were being brought to the plantation to work and live. In 1905 the Pioneer Mill Company employed 1,700 workers, 1,512 of them classified as common and field laborers. The labor force included 1,179 Japanese, 225 Chinese, 120 Hawaiians, 66 Koreans, 65 Portuguese, 24 Puerto Ricans, and 21 Americans, 6 of whom filled the highest management positions (Maui Architectural Group 2005). As the population on the plantation grew, laborer camps, often separated by race, were established near the mill, and in the outlying fields, to house the work force (Maly and Maly 2007). Several camps were established in the vicinity of the current study area, including Honokōwai Camp *makai* of the study area near the coast, Pu'ukoli'i Camp in the neighboring *ahupua* 'a to the south, and Māhinanhina Camp in the neighboring *ahupua* 'a to the north. With the aid of the additional labor, the plantation was able to improve its irrigation system and expand it fields into ever higher elevations, including the lands encompassed by the current study area.

While the Pioneer Mill Company continued to expand their operations during the first decade of the 20<sup>th</sup> century, the managers of the plantation, and other sugar companies operating in West Maui, also acknowledged the importance of protecting the West Maui Mountains and the valuable watersheds they contained for future use. Consequently, these large landowners worked with the Territorial Government of Hawai'i to create the 44,440-acre West Maui Forest Reserve in 1905, which was approved by the Governor in 1907. A total of 1,410 acres of Honokōwai lands *mauka* of the study area subsequently became part of the forest reserve and were protected from future development (The Hawaiian Forester and Agriculturalist 1908). By 1908, the Pioneer Mill Company controlled over 25,000 acres of land with 8,000 acres under cultivation, and they were harvesting over 27,000 tons of sugarcane annually, mostly of the Lahaina and Caledonia variety (Evening Bulletin 1909). During this time, the fields in the Kā'anapali area of the plantation were being worked with steam plows, and the newly cut cane was being conveyed from field to mill by railroad and V flumes. Stations were established where necessary in the fields to transfer the cut cane from the flume to the railroad cars, which then conveyed the cane directly to the mill (ibid.).

The first recorded lease of the study area lands by the Pioneer Mill Company (General Lease No. 780) went into effect on May 13, 1912. This fifteen year lease (set to expire on April 1, 1927) included 1,309.12 acres of agricultural land in Honokōwai Ahupua'a, at an annual rate of \$4,876.75 per year (Rivenburgh 1917). Hawai'i Registered Map No. 2534, prepared by M.D. Monsarrat and J.K. Kahookele in 1912, show the lands leased by the plantation in Honokōwai, which included the current study area in its entirety (Figure 40). Notations on the map—indicating the acreage of cane and waste—suggest that by 1912 most of the study area had already been planted in sugarcane. Other plantation infrastructure shown within the study area includes two separate railroad alignments along the south side of Honokōwai Gulch, several pipeline and ditch Right-of-Ways in favor of the "Lahaina Agricultural Co., Ltd.," a "Road to Honokōhau Ditch," and the alignment of the ditch itself, along with several other cane field access roads, and what appears to be a structure within Mo'omuku 'Apana 3 (LCAw. 11216:28.3 to Kekau'ōnohi). Also, several fence lines and a paddock area are shown in the *makai* portion of the study area, extending north from Honokōhau Gulch, perhaps indicating that ranching activities were also occurring within portions of the study area at this time.

Reconnaissance Survey DHHL Honokōwai Community, Honokōwai, Lahaina, Maui

Soon after the 1912 lease of the Honokōwai lands was executed, the Pioneer Mill Company began refurbishing the Honokōwai Ditch due to the effects of cracks, leakages, and sediment built up over time (Dagher and Dega 2019). Construction of a "new" Honokōhau Ditch began in June of 1912 and was completed in November of 1913. The ditch along the *mauka* boundary of the current study area was realigned at this time to its current configuration. In 1914, Pioneer Mill Company was producing hydroelectric power using a drop in Honokōhau Ditch adjacent to the southeastern boundary of the current study area (Stearns and Macdonald 1942). By 1915, due in large part to the improvements to the irrigation system, the plantation harvested 32,753 tons of sugar from their cultivated lands (Honolulu Star-Bulletin 1916). Hawai'i Registered Map No. 1007, prepared by Jos. Iao in 1915, shows the plantation lands within the current study under cultivation at that time (Figure 41).

By the second decade of the 20<sup>th</sup> century, the metal flume that fed water from Honokōwai Stream into Honokōwai Ditch was in need of replacement. In dire need of providing a steady water supply to feed the 9,500 acres of land that were watered by the ditch, the plantation devised a plan to construct a 7,000-foot-long concrete-lined tunnel to replace the flume. The *mauka* portal of the Honokōwai Tunnel originated at an elevation of roughly 1,580 feet above sea level and extended in a southwesterly direction where it would feed into the ditch replacing the flume (Honolulu Star-Bulletin 1918; Wilcox 1996). By 1917, construction of the Honokōwai Tunnel was nearing completion, and an article published in *The Hawaiian Gazette* that year documented the ongoing progress and benefits of the tunnel:

Work on the Honokowai Tunnel project that is to bring larger supply of irrigation water to Pioneer plantation is rapidly progressing and the construction that started quietly a few months ago is expected to be completed within a year's time.

Pioneer will reap large benefit from this project, the main tunnel of which is to be a mile and one-half long with a daily capacity of 50,000,000 gallons of water.

The purpose of the project is to secure all the freshet [sic] water available to the company's irrigation system conserving many million gallons that now go to waste.

The tunnel cuts across five ridges and replaces a metal flume of about the same length. There will be a diversion tunnel a thousand feet long with a capacity of 25,000,000 gallons that will carry part of the flow to the main tunnel. The tunnel is to be lined with concrete. Construction is being carried on with a two inch air drill and mucking is being done by electric locomotives.

The tunnel will give a larger head of water flow and thus allow further improvement and development of Pioneer's hydro-electric system which develops all its power from the flow of irrigation water. (The Hawaiian Gazette 1917a)

Around this time, nearly the entire island of Maui was suffering from prolonged drought conditions. Pioneer Mill however, had their sophisticated irrigation systems under control and their fields were well-watered. It is said that "travelers through Lahaina are surprised at the fresh and green look of the waving canefields" despite the crispy and arid conditions elsewhere (The Hawaiian Gazette 1917b). Just a few years later, Pioneer Mill's fortune grew substantially with their earnings exceeding one million dollars. This allowed for the further development of hydroelectric power plants and also an opportunity to expand their landholdings and existing land leaseholds. In 1919, the Pioneer Mill Company acquired an additional 350 acres of land in Honokōwai, further facilitating their access to and utilization of the natural water supply, ensuring successful irrigation for their fields (Honolulu Star-Bulletin 1920). A 1922 Irrigation map of the Pioneer Mill company shows the sophisticated system of tunnels and ditches that had been established by that time to water the plantation's cane fields (Figure 42). In addition to the Honokōhau Ditch, along the *mauka* boundary of the current study area, this map shows Kā'anapali Pump ditch crossing the *makai* lands of the current study area to the south of Honokōwai Gulch, along with Honokōwai Reservoir and a proposed Honokōwai Pump Ditch to the north of the gulch following the 300-foot elevation contour.

Beginning in September of 1923 the entire Honokōhau Ditch was re-lined with concrete, a process that took five years to complete (Dagher and Dega 2019). During this re-lining process, the water was diverted from the 1912-1913 ditch alignment back into the old, 1904 ditch alignment, which had been abandoned. The 1924 USGS Mala, Hawai'i quadrangle shows the plantation lands and infrastructure in the vicinity of the study area in that year, including both alignments of Honokōhau Ditch (Figure 43). By the date of this map the Pioneer Railroad tracks had been extended all the way across the *makai* lands of Honokōwai, near the western boundary of the current study area. The Pioneer Mill Company continued to expand its operations throughout the early part of the twentieth century. In 1925 the Pioneer Mill Company processed and ground a record 11,304,508 tons of sugarcane, attesting to the success of the plantation's improvements (Honolulu Star-Bulletin 1925).

2. Background

Reconnaissance Survey DHHL Honokõwai Community, Honokõwai, Lahaina, Maui

Figure 43. Portion of the 1924 USGS Mala, Hawai'i quadrangle with the study area outlined in red.

A 1939 map of "Sugar Plantations at Lahaina – Maui, T.H. Owned by Pioneer Mill Co. Ltd." shows the extent of plantation infrastructure within the study area at that time (Figure 44). Depicted on this map are the five cane fields that comprise the lands of the study area, including Fields 30, B-1, B-2, C-1, and D-1. Field 30 is situated on the north side of Honokōwai Gulch, while the remaining three are situated to the south of the gulch. Also depicted within the study area are three primary ditch alignments, including the "Field 30 Reservoir Ditch," the "Pu'ukoli Reservoir Ditch," and the "Kā'anapali Pump Ditch," along with the "Honokōhau Ditch" adjacent to the *mauka* boundary of the current study area. Several reservoirs are also shown, including two adjacent to Honokōhau Ditch (labeled Field 30 and Field B-1 Reservoirs) that are excluded from the study area, along with the "Honokōwai Gulch, a "tunnel" is shown within Field B-1, which appears to have carried water either to or from "Pump R" within the gulch. The map also shows a network of plantation access roads crossing the study area, including at the two locations where railroad lines were shown on earlier maps.

By 1940s, in an effort to increase acreage of agricultural land, annual cane yield, and ultimately, revenue for the company, the plantation commenced "Operation Pohaku" (Honolulu Star-Bulletin 1959). This operation consisted of a massive, \$2.5 million-dollar effort to mechanically clear thousands of acres of fallow Pioneer Mill land for planting (Figure 45), which resulted in large pyramidal-shaped stone piles on the *mauka* side of Honoapi'ilani Highway near Lahaina Town, and large rocks being moved towards gulch edges across other areas of the plantation. By this time, Stearns et al. (1940) reports that lands stretching east (*mauka*) of the study area, from Honokōwai Stream to Iao Stream, were being cultivated in pineapple and utilized as pasture for cattle grazing. A USGS aerial photograph taken in 1950 shows the cultivated cane fields within the study area at that time, with the more narrow pineapple fields located *mauka* (Figure 46). The 1956 USGS Lahaina quadrangle also depicts the mid-20<sup>th</sup> century plantation infrastructure in the vicinity of the Honokōwai, including the extensive irrigation infrastructure, which stretched from the coast to the mountain slopes (Figure 47).

In 1961 the Pioneer Mill Company became a wholly owned subsidiary of American Factors, Ltd., which shortened its name to Amfac in 1967, and later became Amfac/JMB Hawaii Inc. in 1988 after a series of large stock purchases by a Chicago investment group (Rechtman 2006). By the 1970s, many of the former Pioneer Mill Company's leases, encompassing over half of the plantations land holdings, were expiring (Maui Architectural Group 2005). The lease for the Honokōwai lands appear to have remained in place throughout this period, however, 1965 and 1978 USGS aerial photographs show the study area lands still cultivated in sugarcane (Figures 48 and 49).

During the latter part of the 20<sup>th</sup> century, the uncultivated sugar lands began to be converted to urban use. As leases continued to expire throughout the 1980s and 1990s, more and more lands were being taken out of cultivation, and by 1981 only 8,000 acres of the former Pioneer Mill Co. lands were still being used for sugarcane (Maui Architectural Group 2005). Amfac/JMB Hawaii Inc. also began selling large tracts of land which they held in fee simple to pay off a \$117 million-dollar debt. It appears that the lease for the Honokōwai lands was given up sometime after the 1978 aerial was taken, and that the study area lands were then converted to the cultivation of pineapple by Maui Land and Pine, who commercially cultivated pineapple there for export until ca. 2007 (Cheng 2014). The conversion to pineapple cultivation within the study area (at least to the north of Honokōwai Gulch) is evident in a Google Earth<sup>™</sup> aerial images from 2000 (Figure 50). By the time this image was taken it appears as though the coffee to the south of Kanaunau Gulch had also been planted, and that the lands between Kanaunau Gulch and Honokōwai Gulch.

The Pioneer Mill Company continued to operate until 1999 when it phased out sugar production and closed its doors forever, marking the end of commercial sugarcane production in the Lahaina/Kā'anapali Region. In March of that year, Amfac/JMB Hawaii Inc. announced that the final crop would be harvested in September. After its closing, the mill building and associated infrastructure were left to crumble. Just six years later, the mill building was torn down, except for the smoke stack (Rechtman 2006). After the demolition of the mill, the local community, in conjunction with the Lahaina Restoration Foundation saved the smoke stack, which now has interpretive signage for curious visitors interested in the sugar plantation history of Lahaina (Lahaina Restoration Foundation 2018). Since the closing of Pioneer Mill and the last pineapple harvest in ca. 2007, the study area lands have largely sat fallow. The abandoned fields have become choked with weeds, and the former plantation roads have begun to erode away, making access to many of the formerly cultivated lands difficult. The network of irrigation ditches that once brought life sustaining water to *kula* lands of Honōkowai—diverting it from the streams and gulches that were at the center of traditional lifeways in the *ahupua'a*—are no longer flowing. Now both the gulch and *kula* lands sit fallow, waiting for the people to return, and for a new chapter in the history of these lands to begin.

# **PREVIOUS ARCHAEOLOGICAL STUDIES**

Prior archaeological studies conducted within and near Honokōwai Ahupua'a (Table 3) have included several archaeological inventory surveys (AIS), reconnaissance level surveys, field inspections, as well as archaeological monitoring associated with coastal development projects, the proposed realignment of Honoapi'ilani Highway, and other infrastructure improvements. The locations of relevant prior studies are shown in Figure 51.

The earliest archaeological studies conducted along the West Maui coastline (Stokes 1919; Thrum 1908b, 1920; Walker 1931) focused on traditional ceremonial *heiau* sites. No sites of these kind were documented within Honokōwai Ahupua'a, however, during these earliest studies. According to Walker (1931), the closest *heiau* to the study area, Halulukoakoa Heiau (Site 50-50-03-11), was located more than four kilometers to the south of the current study area in Wahikuli Ahupua'a. Walker (1931) also noted that many of the sites previously recorded by Thrum (1908b, 1920) had been either partially or outright destroyed by the time of his writing.

#### Table 3. Previous archaeological studies conducted in the vicinity of the current study area.

Figure 51. Locations of previous archaeological studies conducted in the vicinity of the current study area.

During the 1970 and 1980s, the acceleration of resort development and urbanization resulted in a series of intensive contracted survey and excavation projects conducted along the coastline and within the gulches and *kula* lands of Honokōwai Ahupua'a (see Figure 51). One early response to the threat posed by development on historic sites was a report prepared by the Bernice Pauahi Bishop Museum entitled *Endangered Hawaiian Archaeological Sites Within Maui County* (Emory and Hommon 1972). In that report, several gulches were recommended to be surveyed, including Honokōwai Gulch, which was determined to contain a high concentration of sites. A general settlement model for the Honokōwai Valley based on archaeological data and Land Commission Award claims predicted that the lower portions of the Honokōwai Gulch, as well as other gulches, would have been dependent on wetland *kalo* (taro), with the upper portions of the valley used for dryland agriculture and associated temporary habitation.

During the Statewide Inventory of Historic Places in 1973, two archaeological sites were identified within the immediate vicinity of the current study area (see Figure 51). The "Honokōwai Petroglyphs," Site 50-50-03-1207, consists of about 45 petroglyphs located on boulders covering an approximately 100 square meter area in the southern branch of the Honokōwai Gulch (Kanauau Gulch). This site is located near the southern boundary of the current study area. Site 50-50-03-1208, "Honokōwai House Outline," consists of a house "outline" composed of several stone wall alignments and associated platforms located outside the current study area in the lower segment of Honokōwai Gulch. Cultural material recorded at the site include two *ulumaika* stones and a fragment of an adze.

Bishop Museum (Kaschko 1974) conducted an archaeological walk-through survey of specific areas in the Wailuku Flood Prevention Project and the Honolua Watershed (see Figure 51). Eight gulches were investigated between Honokōwai and Nāpili. Three of the six sites identified during that study were located near the current study area. The previously recorded "Honokōwai House Outline" (Site 1208) was observed to be in the same condition as previously described and was not further documented. Two midden deposits sites (Site 50-50-03-217 and -218) were recorded north of the current study area within Māhinahina Gulch. The sites identified by Kaschko (1974) were re-examined by Sinoto (1975:2), who recommended that salvage excavations be conducted on any of the sites affected by construction work, as all six appeared eligible to the National Register of Historic places under Criterion D.

In 1976 archaeological survey and excavations (Griffin et al. 1976) were conducted within gulches located along a proposed realignment corridor for the Honoapi'ilani Highway between Honokōwai and 'Alaeloa (see Figure 51). Honokōwai Gulch was included in this survey, which extended along the *makai* boundary of the current study area. Table lands between the gulches were excluded from the study due to the extensive disturbance from sugarcane cultivation. No archaeological sites were identified near the present study area, although five sites were identified within other gulches. The two midden deposits identified by Kaschko (1974) in Māhinahina Gulch (Sites 217 and 218) were re-designated as a temporary habitation area (Site 50-50-03-225) and salvage excavation was conducted at the newly combined site. Radiocarbon dates obtained from the sites indicated occupation for several centuries before western contact. The other sites identified included a section of trail supported by a retaining wall (Site 50-50-03-215) located within Ka'ōpala Gulch, a section of possible *ahupua 'a* boundary wall (Site 50-50-03-216), and a stone-and-cement retaining wall (Site 50-50-03-227) located within Kahana iki Gulch. Griffin et al. (1976) interpreted their results to mean that the *ahupua 'a* of Māhinahina was of minimal agricultural value, and that occupation would have been limited to short-term visits with habitations situated near the coastal areas.

*Mauka* of the current study area, Davis (1977) conducted an archaeological inventory survey within the upper portions of Honokōwai Gulch (see Figure 51). Four agricultural complexes (Sites 50-50-01-228, -229, -230, and -231) were identified on the south and north banks of the Honokōwai Stream. The complexes included stone-faced terraces for irrigated and dryland agriculture, habitation platforms, field shelters, multiple retaining walls, free-standing stone walls, remnant diversion dams, irrigation channels, and a possible agricultural shrine. Based on his survey results and historical literature research, Davis concluded that Honokōwai Valley was intensely used for the cultivation of irrigated *kalo* and that the lower section of the gulch had been extensively modified with terraced pond-fields, habitation platform terraces, and related structures.

Beginning in 1982, a series of studies (Hommon 1982; Jensen 1989, 1990; Morawski and Dega 2003) was conducted in the North Beach Mauka and South Beach Mauka Development areas located to the south of the current study area (see Figure 51). The first of these was conducted by Hommon (1982), who surveyed approximately 405 acres extending to approximately 320 feet elevation. The second study (Jensen 1989) re-surveyed Hommon's (1982) project area along with additional acreage totaling about 673 acres. The North Beach Mauka project area is located adjacent to the southern boundary of the current study area. Within this portion of his project area, Jensen (1989) identified four sites (Sites 50-50-03-2001, -2002, -2003, and -2491) comprising 24 features. All four sites were located in an unnamed gulch referred to by Jensen (1989) as Pu'ukoli'i Gulch.

Sites 2001, 2002, and 2003 were previously recorded by Hommon (1982). Site 2001 was reported by Hommon (1982) to be an agricultural complex of scattered terraced structures and one upright stone situated along the northern side of the gulch. During his fieldwork, Jensen (1989) identified nineteen separate agricultural terrace segments, but not the upright stone. Site 2002 was described by Hommon (1982) as a 10-meter-long wall located on the southern side of the gulch. Jensen (1989) relocated the wall agreed with Hommon's association of the site with Historic ranching operations. Site 2003 was reported by Hommon (1982) as a 6-meter-long wall segment located near the upper portion of the gulch. Hommon associated the wall with Historic ranching operations based on the presence of barbed wire. Jensen (1989) did not observe barbed wire in association with the wall, but did not disagree with Hommon's interpretation. One newly recorded site (Site 50-50-03-2491) comprising two agricultural terrace remnants was identified by Jensen (1989). The site was located about 20 meters west of the Pu'ukoli'i Cemetery (south of the current study area) on both sides of the south branch of the gulch.

Within the South Beach Mauka project area, nine sites (Sites 50-50-03-2004 through -2010, -2490, and -2489) were recorded (Jensen 1989, 1990) within Hahakea Gulch (approximately 3.5 kilometers south of the current study area). Hommon (1982) identified seven of these sites (Sites 2004 through 2010), which collectively consisted of 23 agricultural terrace remnants, three road segments, three short wall segments, and a possible upright stone. Jensen (1989, 1990) recorded two additional sites (Sites 2490 and 2489) comprising twenty-one agricultural terrace remnants, two habitation terraces, two enclosures, a footpath, and a feature identified as a grave or cairn. Hommon's and Jensen's findings revealed that within the lower segment of the Hahakea Gulch there was no evidence of habitation or other non-agricultural related features. Evidence of habitation associated with extensive agricultural activities was encountered in the upper segments of the gulch situated on both sides of the ridges. Their work also documented widespread surface disturbance from commercial agricultural activities in the *kula* lands between the Pu'ukoli'i and Hahakea gulches. The survival of the features they had recorded was attributed to "their location on the steep margins, or near the bottom, of the two major gulches which remain within the project area, areas which were unsuited for pineapple or sugar cane cultivation" (Jensen 1990:22). Further evidence of the extent of prior disturbance within the South Beach Mauka project was observed during a later AIS (Morawski and Dega 2003) of a 7.65-acre portion of the area near Honoapi'ilani Highway (see Figure 51), which identified no surface or subsurface archaeological features.

A portion of the North Beach Mauka development area was included in an AIS (Jensen and Mehalchick 1992) along with a 260-acre development area located inland of the South Beach Mauka development area. Only two sites were identified, a previously-recorded Precontact agricultural property (Site 50-50-03-2491) and an abandoned reservoir which was not recorded nor assigned a SIHP site number.

In 1989 Barrera (1989) conducted a reconnaissance survey of three alternatives for the proposed realignment of Honoapi'ilani Highway between Lahaina and Honokōwai (see Figure 51). Two alternatives (A and C) of the proposed project extended through the current study area (Figure 52). In Honokōwai Gulch, Barrera (1989:9) noted the presence of a possible habitation terrace located near Site 1208 (the "Honokōwai House Outline"), which he described as:

An unrecorded possible habitation terrace was found where the Alternative A extension crosses Honokowai Stream [see Figure 52]. It consists of a stone retaining wall three meters in length and standing to a height of 50 centimeters situated on a 45 degree slope, half way between the streambed and the top of the slope. No midden or artifacts were found.

Another AIS (Jensen 1991) for a different realignment alternative for the Honoapi'ilani Highway included a portion of the current study area (see Figure 51). Among the sites recorded during that survey were two located within Honokōwai Gulch (Sites 50-50-03-2847 and ACH 10-17-90), but outside of the current study area (Figure 53). Site 2847 was recorded as three features located at the terminus of a ridge (along the north side of Kanauau Gulch) separating the two branches of Honokōwai Gulch. These features included a rubble wall constructed in an incomplete circle (Feature A), a nine-meter-long segment of a wall (Feature B), and another wall segment that abuts Feature A (Feature C). No artifacts or midden were observed at the site, but dense vegetation reportedly restricted surface visibility. Site 2847 was determined to be significant for its information content and was recommended for further data collection. In 1994, the proposed Lahaina Bypass Highway corridor was realigned to avoid Site 2847, and the treatment of Site 2847 was changed from data recovery to preservation and avoidance (Rosendahl 1994; Log No. 11460, Doc. No. 9406RC04).

Jensen (1991:17) described the site as follows:

Site 2847 - Enclosure (Possible Reservoir and Possible Boundary Walls)

This site is located at the terminus of the narrow "finger" ridge which proceeds roughly east-west and which separates two branches of Honokowai Stream at the point of intersection with the proposed new road alignment. The site consists of three contiguous rock wall features [Figure 54]. Feature A is a rubble wall which scribes an incomplete circle. The wall was constructed near the end point along the ridge, just above the south branch of Honokowai Stream on relatively flat terrain. A semicircular rubble wall, ranging in height from 1.0 to nearly 2.5 meters, encloses an area which extends approximately 67 meters east-west by 57 meters north-south. The southeast portion of the enclosing circle is incomplete, and is defined by widely scattered boulders rather than a well defined solid wall. It is possible that the interior of the wall was lined and that it was constructed as a reservoir. It is also possible, however, that it functioned as a corral for domestic animals during historic to recent times. Oral testimony supplied by a local informant suggests that numerous small sugar cane workers' houses were located within this gulch area during the 1930s and 1940s, and the walled enclosure may have defined the perimeter of a corral for domestic animals. In any case, no artifacts or midden deposits were observe anywhere within or around the margins of the feature, so that no direct dating evidence was secured during the present project. On the other hand, the area is extensively overgrown with vegetation, and such material may be present in the area.

Feature B consists of a nine meter-long segment of wall, more formal in appearance and construction techniques than the rubble which comprises Feature A. Feature B abuts the east side of Feature A, and proceeds roughly 9 meters at 80 degrees Az from the edge of the Feature A enclosure. The wall may continue beyond the project area boundary (easterly) although this was not determined during the present project. It is unknown whether this feature was constructed and utilized concurrently with Feature A, or represents a boundary wall or some other feature, perhaps pre-dating construction of Feature A. No portable cultural material and no midden deposits were observed within or adjacent to the wall, although such material may be concealed by dense vegetation and collapsed sections of the wall within the project area.

Feature C is generally similar to Feature B and abuts Feature A on the feature's west side. Feature B and C may in fact represent disarticulated segments of the same wall which was dismantled within Feature A for use in constructing Feature A itself. Feature C proceeds approximately 10 meters west of the western edge of Feature A and, as with Feature B, may also continue beyond the project area boundary. As well, it is unknown whether this feature was constructed and utilized concurrently with Feature A, or represents a boundary wall or some other feature which predates Feature A. No portable cultural material and no midden deposits were encountered to assist in dating; however, such material/deposits may be concealed by dense vegetation and collapsed segments of wall.

Figure 52. Portion of Barrera's (1989) site location map with the current study area shaded red.

The second site recorded within Honokōwai Gulch, also beyond the boundaries of the current study area (see Figure 53), was designated "ACH 10-17-90" by Jensen (1991). The site contained cultural material and associated features, including formal habitation terraces, numerous walls, and other agricultural-related features. No further work was undertaken at the site during the survey as it was located outside the proposed road corridor. Jensen (1991:24) described the site:

During the present project's field survey work along the bottom of Honokowai Gulch, cultural materials were noted at a point c. 90 meters east of the east side of the flagged corridor alignment. These cultural materials appeared to consist of formal habitation terraces and numerous walls and other agriculture-related features. Flagging tape was observed at one of the features, along with a metal tag inscribed "ACH 10-17-90." It is believed that this represents cultural material observed in conjunction with the initial survey of the earlier Bypass Road corridor alignment, as reported in the existing EIS for this project. This site will not be affected by the construction project, as presently proposed, and no further work was undertaken at this site during the present project. The approximate location of the site is noted in [Figure 53]. Two previously identified sites (Site 50-50-03-2489 and -2490) are located at the confluence of two branches of the Hahakea Gulch and consist of two agricultural complexes. A single site (Site 50-50-03-2484) consisting of a partial rock enclosure or L-shaped wall is situated above Kahoma stream...

Figure 53. Portion of Jensen's (1991:3) site location map with the current study area shaded red.

West of Honoapi'ilani Highway (see Figure 51), several relatively recent studies have been conducted on coastal parcels located near the current study area. Most of these studies did not identify any surface or subsurface historic properties or cultural material deposits (Andricci and Dega 2015; Dagher and Dega 2018; Dega 2005; Fredericksen et al. 1995; Havel and Dega 2005; Monahan 2004; Willman et al. 2008). An exception to this was a subsurface archaeological reconnaissance study (Rosendahl 1987) of the 96-acre North Beach Development area that resulted in the identification of an "L-shape wall" (Site 50-50-03-2696). Another exception was an AIS (McGerty and Spear 1996) of a 3.269-acre parcel located to the north of Honokōwai Beach Park (see Figure 51). Seven sites were identified during that study, including a cemetery (Site 50-50-03-4218) and the surrounding area (Site 50-50-03-4219), as well as several early Historic stone alignments and low stacking features, were identified. Subsurface testing on the south side of the cemetery did not identify additional burials or cultural materials.

On the *mauka* side of Honoapi'ilani Highway near the southwest corner of the current study area (see Figure 51), an AIS with subsurface testing was conducted at the Lahaina Wastewater Reclamation Facility by Ogg et al. (2007). No archaeological sites or features were encountered. The majority of the trenches contained cultural material associated with historic sugarcane cultivation as well as modern plastic irrigation tubing.

Further southwest of the current study area, four archaeological investigations (Fredericksen 1998; Graves 1993; Rosendahl 1986) have occurred at the Sheraton Maui (see Figure 51). A field inspection (Rosendahl 1986) identified no sites, which was attributed to the fact that almost the entire project area, with the exception of portions of the coastal

#### 2. Background

flat and the exposed face of Pu'u Keka'a, had been developed. Subsequent backhoe trenching (Graves 1993) prior to renovations on the hotel grounds encountered only imported fill, and no cultural material was observed. Archaeological monitoring for renovations conducted in 1996, however, resulted in the discovery of the remains of a Japanese cemetery, including nine "random finds" of human remains in secondary contexts and seven primary interments (Fredericksen 1998). Oral histories that were collected in association with that project indicated that human remains were a common discovery during the initial construction of the hotel in the 1960s. An archaeological assessment (Bulgrin and Rechtman 2005) of a roughly 1.6-acre parcel situated adjacent to the 2<sup>nd</sup> hole of the Kā'anapali Golf Course also identified no archaeological resources or cultural material.

Three studies have been conducted relatively recently near the upper elevations of the current study area (see Figure 51). Two of these studies documented portions of the Historic Honokōhau Ditch (Site 50-50-01-1591), which forms the *mauka* boundary of the current study area. The first of these was an archaeological field inspection (Perzinski and Dega 2012) for the Māhinahina Production Well Improvements Project, which identified a portion of the ditch located outside the current study area. The second study was an AIS (Dagher and Dega 2019) for the proposed West Maui Water Source Development Project, which included a portion of the ditch located along the northeastern boundary of the current study area. The ditch was built in 1902 and completed in 1904 by Honolua Ranch and Pioneer Mill. A new ditch was constructed and completed in 1913, and by 1923 the entire ditch was re-lined. To mitigate potential impacts to Site 1591 from construction activities, it was recommended that the proposed waterlines be installed beneath the Honokōhau Ditch by horizontal directional drilling at a depth ranging from 8 to 10 feet. Additionally, an archaeological field inspection and background study (Dagher and Dega 2016) conducted near the northeast corner of the current study area identified no historic properties.

Figure 54. Plan view map of Site 2847 (Jensen 1991:18) with current study area shaded red.

# **3. STUDY AREA EXPECTATIONS**

Based on the culture-historical context and the findings of previous archaeological studies summarized above, a fairly detailed set of archaeological expectations specific to the current study area is now presented. The current study area is located between 15 and 220 meters (50 to 720 feet) above sea level on the lower *kula* slopes of the West Maui Mountains and includes Honokōwai Gulch and two of its tributaries, Onepeha and Kanauau Gulches. Traditional patterns of settlement and agriculture are partially reflected in the distribution of Land Commission Awards in the gulch areas included in the current study area. Although portions of only seven awarded *kuleana* are inside the current study area, at least 187 parcels totaling 1,119.32 acres were awarded within Honokōwai Ahupua'a—the majority of these distributed along the length of Honokōwai Stream. This distribution pattern suggests that the well-watered valley floor was extensively cultivated, primarily in *kalo* and *'uala* based on historical accounts.

The gulches in the current study area appear to have been generally spared from the major land alterations that occurred on the sugarcane fields that surround them. Within these gulches, several archaeological sites have been recorded by prior studies in or near the current study area. These include Site 1207, the "Honokōwai Petroglyphs," which was reported in Kanaunau Gulch in the southern portion of the study area. Other sites recorded in Honokōwai Gulch include Site 1208 ("Honokōwai House Outline"), Site 2847 (an enclosure), a possible habitation terrace identified by Barrera (1989), and the complex designated ACH 10-17-90 by Jensen (1991). In addition to these previously recorded sites, historical maps depict a structure within LCAw. 11216 'āpana 3 located in the northeast corner of the current study area.

The *kula* lands within the study area, by contrast, were used for intensive sugarcane and pineapple cultivation between about 1912 and 2007. Land clearing and repeated plowing is very likely to have obliterated any surface archaeological features pre-dating sugarcane cultivation located outside of the gulches. This assumption is supported by the largely negative results of archaeological inventory surveys (Jensen 1989, 1990; Jensen and Mehalchick 1992; Jensen and O'Claray 1991) of *kula* lands located in the vicinity of the current study area. In the place of Precontact archaeological sites, then, evidence of sugarcane and pineapple cultivation and associated infrastructure built by the Pioneer Mill Company and its successors is likely to be encountered.

In summary, archaeological features dating prior to about the 1860s within the current study area are likely restricted to the interiors of Kanauau and Onepeha gulches and Honokōwai Gulch (as it extends within the confines of the study area), and also on the upper margins of the gulches where the terrain was not suitable for sugarcane or pineapple cultivation. These features could include surface architecture (e.g. walls, enclosures, platforms, terraces, modified outcrops, rock piles, mounds), overhang shelters, trails, petroglyphs, or midden and lithic scatters. Outside of the gulches, it is expected that the remains of Historic and Modern plantation infrastructure including roads, water tanks, water lines, ditches, flumes, reservoirs, and other irrigation infrastructure, will be encountered.

# 4. FIELDWORK

Fieldwork for the archaeological reconnaissance survey of the proposed DHHL Honōkowai Community was conducted on October 14-18, 2019 by ASM staff members 'Iolani Ka'uhane, B.A., Lauren Kepa'a, Genevieve Glennon, B.A., and Johnny Dudoit, B.A., under the direction of Matthew R. Clark, M.A. (Principal Investigator). The fieldwork was conducted following the initial preparation of the literature review presented above, and was designed to provide insights and data that could be used to formulate recommendations regarding the historic preservation review process for the proposed project and future archaeological study within the proposed project area.

# FIELD METHODS AND FINDINGS

During the archaeological reconnaissance survey, a visual inspection of the ground surface of the study area was conducted by fieldworkers walking variously spaced pedestrian transects (Figure 55). Existing landscape features (i.e. roads, ditches, gulches, etc.) were used to segment the overall study area into smaller, more manageable survey areas, and special attention was given to inspecting the ground surface within Onepeha, Honokōwai, and Kanaunau gulches, the former locations of *kuleana* awards, and other areas not previously utilized for the commercial cultivation of sugarcane or pineapple. Targeted reconnaissance survey was also conducted at several locations where the maps reviewed above indicated Historic Period plantation features, previously identified archaeological sites, or other historic properties might be present. The total survey coverage for each survey area delineated within the overall study area (i.e. the *Kula* Lands, Onepeha Gulch, Honokōwai Gulch, and Kanaunau Gulch), and the limiting factors for identifying cultural features within those survey areas, are discussed in further detail below.

Figure 55. Map showing the reconnaissance survey coverage within the study area.

The locations of all potential historic properties identified during the pedestrian transects were collected using a Trimble Geo 7x Geo Explorer 7000 series handheld GPS receiver (set to the NAD 83 Zone 4 North) with sub-meter accuracy. Each feature was then assigned a temporary site number (T-1, T-2, T-3, etc.) sequentially as it was recorded, or matched to an existing State Inventory of Historic Places (SIHP) site number if it had been previously inventoried. After being adequately cleared of vegetation, the identified sites and features were photographed and briefly described using standardized field forms. Scaled plan maps and sketch maps of selected features were also prepared as part of the fieldwork.

As a result of the reconnaissance survey fieldwork, a total of fourteen archaeological sites were identified within the proposed DHHL Honokōwai Community study area (Figure 56). Of the identified sites, only one (Site 50-50-03-1207) had been previously documented. The remaining thirteen temporary sites (T-1 to T-13) were newly identified as a result of the current study. Each of these sites is described in further detail below, and the findings are presented by survey area (i.e. the *Kula* Lands, Onepeha Gulch, Honokōwai Gulch, and Kanaunau Gulch). Specific recommendations regarding additional documentation and the treatment of the sites are offered at the conclusion of this report.

Figure 56. Map showing the locations of archaeological sites identified within the study area (shaded red) during the reconnaissance survey fieldwork.

# Kula Lands Survey Area

The *kula* lands within the study area were used for nearly a century of intensive sugarcane and pineapple cultivation, and have been subject to repeated episodes of land clearing that began during the early  $20^{\text{th}}$  century. Most of the vegetation currently covering the *kula* lands is less than 15 years old, and has become established since the last pineapples were harvested from the study area in ca. 2007. Below about the 300-foot elevation contour, these formerly cultivated lands are covered in low buffelgrass and weeds interspersed with scattered *koa haole* and other shrubs. Above the 300-foot elevation contour the vegetation becomes thicker, and transitions to tall Guinea grass mixed with *koa haole*, Christmas-berry, silky oak, java plum, and other vines, weeds, and shrubs. While the ground visibility was generally adequate for identifying any cultural features that may have been present across the entire *kula* lands survey area, the thick vegetation in the upper reaches of the study area made just the act of walking transects quite difficult. Given that the expectations for identifying historic properties within the *kula* lands survey area were extremely limited based on the results of the literature review, transect spacings and orientations were continually adjusted during the survey of the *kula* lands to account for the thickness of vegetation and the steepness of slope. No formal survey of the coffee orchard along the southern boundary of the study area was conducted during the reconnaissance survey, although some of the roads through the cultivated rows of coffee, which are maintained with weed spray, were walked.

Generally, the less vegetated, lower *kula* slopes (below the 300-foot elevation contour) were walked utilizing north/south pedestrian transects with fieldworkers spaced at 40 to 50-meter intervals, while the more thickly vegetated

upper *kula* slopes (above the 300-foot elevation contour) were walked utilizing westerly oriented (down-slope) pedestrian transects with fieldworkers spaced at 50 to 70-meter intervals (see Figure 55). Tighter transect spacing was utilized to examine the surfaces of the former *kuleana* parcels awarded within the current study area. The areas of tighter transect spacing include (1) the portions of the four *kuleana* awards situated along the western boundary of the study area to the north of Honokōwai Gulch (LCAws. 4249:1 to Kameeui, 3988:3 to Hilahila, 4242:3 to Kaaea, 3925H-1 to Kaaha; Figure 57); (2) the portion of the *kuleana* awarded to Pokole near the northwestern corner of the study area (LCAw. 3852:1; Figure 58); and (3) the award to John Previer (LCAw. 327B:4; Figure 59) on the upper *kula* slopes between Honokōwai and Kanuanau gulches. The *kuleana* situated along the western boundary of the survey area were walked utilizing north/south pedestrian transects with fieldworkers spaced at no more than 10-meter intervals, while the larger, more *mauka* award to John Previer (LCAw. 327B:4) was walked utilizing westerly oriented (down-slope) pedestrian transects with fieldworkers spaced at no more than 40-meter intervals.

No historic properties were identified on the surfaces of any of the *kuleana* lands. However, as known loci of former *kula* agricultural activities, used primarily for the dry-land cultivation of crops such as *kalo* (taro) and *'uala* (sweet potato), the *kuleana* parcels were also evaluated for the potential to contain buried cultural deposits. The results of the survey of these lands, indicate that three of the *kuleana* parcels (LCAws. 3988:3, 4242:3, and 3925H:1) situated near Honokōwai Gulch were subject to fairly recent mechanical disturbance that removed most of the top soil from them to a depth of 6 to 10 feet (Figure 60), as indicated by a cut along a roadway near their *mauka* edges that continues along the southern edge of LCAws. 3988:3 to Hilahila to Honoapi'ilani Highway. The ground surface of the portion of the *kuleana* parcel located near the northwestern corner of the study area (LCAw. 3852:1; Figure 61) has also been severely disturbed and is a poor candidate for subsurface testing. The only *kuleana* along the western boundary of the study area to possess any archaeological potential for subsurface testing is LCAw. 4249:1, nearest to Honokōwai Gulch, where the ground surface, although formerly cultivated, appears relatively intact (Figure 62). The surface of the *kuleana* awarded to John Previer (LCAw. 327B:4) in the *mauka* portion of the study area has been significantly impacted by field clearing activities associated with the Historic and Modern cultivation of sugarcane and pineapple, and as such is also a poor candidate for subsurface testing.

Figure 62. General location of LCAw. 4249:1 to Kameeui, view to the northeast.

The only historic properties identified within the *Kula* Lands Survey Area were related to the Historic cultivation of sugarcane. Sugarcane has been grown on the *kula* lands of the study area since the Precontact Period of Hawaiian history, but it was not commercially produced until the latter part of the 19<sup>th</sup> century. The scale of commercial sugar production intensified in the Lahaina/Kā'anapali region of West Maui following the incorporation of the Pioneer Mill Company in ca. 1860, but did not reach the Honokōwai lands of the current study area until around the turn of the 20<sup>th</sup> century. The entire *Kula* Lands Survey Area is actually part of a built agricultural landscape consisting of portions of the former Pioneer Mill Company's Fields 30, B-1, B-2, C-1, and D-1 and their associated plantation infrastructure (see Figure 44). As discussed in the culture-historical context presented for Honokōwai Ahupua'a above, the plantation landscape within the study area evolved over time from the first commercial planting of sugarcane to the final harvest of pineapple. As the plantation field infrastructure spread across the *kula* lands, older elements of the Precontact Period landscape were obscured (destroyed and replaced) by Historic Period "improvements," which then morphed over nearly a century of use into the Modern Period agricultural landscape that covers most of the study area today.

Maps prepared during the late 19th and 20th centuries document the landscape changes that occurred within Honokowai during the Historic and Modern Periods, and provide clues to specific features of the Historic agricultural landscape that may still be present within the study area kula lands, such as roads, railroads, irrigation ditches, and other water distribution features. In the context of the current reconnaissance survey, only those elements of the plantation landscape that are more than 50 years old were considered for their potential to be assessed as significant historic properties. An 1883 map of Honokowai (see Figure 38) suggests that very little plantation infrastructure was present within the study area at that time, but does show what appears to be an enclosure along the south side of Honokōwai Gulch. On the other hand, a 1912 map of Honokōwai prepared by M.D. Monsarrat and J.K. Kaho'okele (see Figure 40) when the Pioneer Mill Company first leased those lands shows that much of the study area was planted in cane by that year. It depicts some of the early plantation infrastructure that was present during the early 20th century including cane roads, Honokohau Ditch, a reservoir, and two railroad alignments. Additionally, that map shows possible ranching infrastructure in the makai portion of the study area. A later 1939 Pioneer Mill Company field map (see Figure 44) shows the current study area within Fields 30, B-1, B-2, C-1, and D-1, and illustrates not only the extensive modification of the study area's kula lands, but also the presence of several newer plantation roads (including at the locations of the former railroad alignments), three primary ditch routes (Pu'ukoli'i Reservoir Ditch, Kā'anapali Pump Ditch, and Field 30 Reservoir Ditch), the Honokowai Reservoir, two other reservoirs adjacent to Honokowai Ditch, a tunnel section on the south side of Honokōwai Gulch, and a number of other irrigation features. Later maps

and aerial photographs indicate that much of this basic plantation field infrastructure persisted until the latter part of the  $20^{\text{th}}$  century when the study area was planted in pineapple, and that some of it is still present.

Targeted efforts were made during the survey of the study area kula lands to relocate all of the plantation features shown on Historic maps, but only those features possessing integrity of Historic materials were assigned temporary site designations and documented archaeologically. Other features, such as plantation road alignments and the former routes of earthen ditches, were simply noted and photographed, and are briefly discussed here. Despite targeted survey efforts, no physical evidence of the tunnel section shown along the south edge of the Honokowai Gulch in 1939 was identified. The original alignment of the Pu'ukoli'i Reservoir Ditch was encountered during fieldwork, but its channel has been filled in, and is recognizable now only as an earthen berm (Figure 63). A section of the Kā'anapali Pump Ditch extending through the southwestern corner of the study area was also noted during the current fieldwork. This ditch consists of an earthen channel that lacks any evidence of Historic Period construction materials (Figure 64), although two sections of riveted metal pipe (Figure 65) are present on the ground surface immediately to the south of the ditch. The locations of both railroad corridors depicted on the 1912 Pioneer Mill Company map and the 1924 USGS Mala quadrangle (see Figure 43) were also investigated, however, no in-situ, physical elements of either railroad was identified, and it appears that all structural elements of both railroads within the study area have been removed. As shown on later maps that he former alignments of these railroads were subsequently readapted for use as plantation roads. Portions of the makai-most railroad alignment, which is still intact to the south of the study area (Figure 66), have been replaced by a paved asphalt roadway (Figure 67) that provides access to the wastewater treatment facility and appurtenant structures, while the mauka railroad alignment has been replaced by an unimproved dirt road (Figure 68) that is currently used to access the coffee fields in the southern portion of the study area.

Over the years, the former cane road alignments depicted in Historic maps from the early twentieth century were repeatedly consolidated and realigned to provide more efficient access to cultivated fields. While roads are the most prevalent type of plantation features still present throughout the study area *kula* lands, the majority of those currently present were created by bulldozers during the second half of the twentieth century. Many of these roads, particularly to the south of Honokōwai Gulch, are even more recent creations dating to the late 20<sup>th</sup> century or early 21<sup>st</sup> century, which were developed to provide access to Maui Land and Pine's pineapple fields, and in later years to the Kā'anapali Coffee Farms coffee orchard. Despite the intensive modification of the landscape over the last century, several dirt road alignments shown on Historic maps are still present within the study area. One of these, the main east/west access road to the Māhinahina Surface Water Treatment Facility near the eastern boundary of the study area, extends between Honokōhau Ditch and Honoapi'ilani Highway (Figure 69). The alignment of this road, labeled "Road to Honokōhau Ditch" on older plantation maps (see Figure 40), shifted dramatically from its original meandering route to a perfectly straight trajectory following the creation of formalized cane fields within the study area during the 1920s (see Figure 43). This road now accesses an existing water tank within the study area (Figure 70) that has been shown on plantation maps since the late 1930s (see Figure 44) before continuing *mauka* to Honokōhau Ditch. The construction of most of the other access roads within the study area also appears to date to the late 1930s or 1940s.

The only tangible elements of the plantation infrastructure possessing integrity of Historic materials that were identified within the *Kula* Lands Survey Area consist of four sections of concrete irrigation ditch (T-1, T-3, T-4, and T-13), a section of concrete and wooden flume (T-5), and a short rock wall (T-12) located at the end of a fence line adjacent to the southern edge of Honokōwai Gulch (see Figure 56). Each of these temporary sites is briefly described below.

#### Site T-1

Site T-1 consists of a short section of the Field 30 Reservoir Ditch located extending from the *kula* lands along the southern edge of Onepeha Gulch near the *mauka* boundary of the current study area into the shallow gulch itself (see Figure 56). This section of ditch is shown on maps of the study area as early as 1939 (see Figure 44), although the right-of-way for the ditch, to the north of T-1, is depicted on maps as early as 1912 (see Figure 40). What remains of the ditch itself, in this area, is an earthen channel that descends from the former cane fields near the Field 30 Reservoir, in a northeasterly direction, into Onepeha Gulch, where a mortar and stone ditch segment and the remains of a former sluice are present (Figures 71 and 72). Within the gulch the former ditch channel has been almost completely silted in.

#### 4. Fieldwork

#### Site T-3

Site T-3 consists of a partially stone and concrete lined section of the Honokōwai Pump Ditch that extends northwest across *kula* lands of the current study area for roughly 120 meters (see Figure 56). This section of ditch, labeled "Proposed Honokōwai Pump Ditch" on a 1922 Pioneer Mill Company irrigation map (see Figure 42), has been in shown on maps of the study area since at least the late 1930s (see Figure 44). The southeastern most portion of Site T-3, directly below the levee for the Honokōwai Reservoir, is stone and concrete lined for a distance of roughly 25-meters (Figure 73). A date inscribed in the concrete cap on the top of the southern wall of this section of ditch indicates that the concrete was either added or repaired in 1962 by "MADAMBA" (Figure 74). Beyond the concrete lined section, Site T-3 transitions to an earthen, berm-lined channel that continues for 95 meters to a concrete and cobble culvert beneath the road that follows the northern edge of Honokōwai Gulch and access Honokōwai Reservoir (Figure 75). On the opposite side of the road, the Honokōwai Pump Ditch continues as an earthen channel following the 300-foot elevation contour to the northern boundary of the study area. This section of ditch is almost completely silted in, and is easier to recognize on aerial images than on the ground in the field. Historic-era shut-off valves (Figure 76) for the older pipeline right-of ways extending both northwest and southwest from the Honokōwai Reservoir are present above the Site T-3 ditch near the northwestern corner of the reservoir, but are not included within the current study area.

### Site T-4

Site T-4 consists of a concrete cobble ditch situated within the study area *kula* lands along the southern edge of Honokōwai Gulch near its western end (see Figure 56). The site consists of a ditch with cobbles held together with concrete that measures approximately 8.5 meters long by 0.7 to 0.9 meters wide with a depth of 0.5 meters (Figure 77). The southern end begins at the top of a steep slope and extends downslope with the northern end partially extending over a steep drop off. At this section, a semi-circular metal flume piece is still attached to the concrete ditch. A partially intact fence line is situated along the northern side of the ditch extending downslope. This ditch may be a portion of the Kā'anapali Pump House Ditch, shown on maps as early as 1922 (see Figure 42), that received water from Pump House F located nearby within Honokōwai Gulch.

### Site T-5

Site T-5 consists of a concrete piers, a concrete culvert, and a section of wooden flume box situated near the western boundary of the study area along the main cane haul access road, just to the north of Honokōwai Gulch (see Figure 56). This structure, which is located adjacent to the former plantation railroad alignment (see Figure 43), may represent a former loading station, where the harvested cane, carried by flumes from the fields, was loaded onto railroad cars for transport to the Pioneer Mill. The flume structure is situated on both sides (east and west) of the main access road but has been heavily impacted on the west end by prior land disturbances. The east portion of the flume structure consists of a concrete channel with a wooden flume box (Figures 78 and 79). A modern water pipe was observed within the flume box from previous modifications. The flume box measures 3.0 meters long by 0.84 meter wide with a thickness of 24 centimeters. The flume box connects to a concrete culvert that leads under the main access road. The western portion has been destroyed and only a small section of the tunnel was observed partially buried into the surface.

# *Site T*-12

Site T-12 consists of a free-standing, cobble wall section situated along the southern edge of Honokōwai Gulch at the northern termination of an old wire fence line (see Figure 56). The wall is comprised of stacked medium to large sized basalt cobbles against a boulder outcrop (Figure 80). The wall measures roughly 2 meters long by 1.2 meters tall, by 0.7 meters wide. An old wooden fence post is incorporated into the wall construction. Site T-12 is likely associated with plantation-era ranching activities that once occurred within the study area *kula* lands.

# Site T-13

Site T-13 is a low-walled ditch of form-poured concrete that extends west from Honokōhau Ditch near the eastern boundary of the study area along the southern edge of Kanaunau Ditch (see Figure 56). This ditch section (Figure 81) may represent a portion of the either the original alignment of the old Honokōhau Ditch completed in 1904, or a section of ditch created when the newer 1912 alignment of Honokōhau Ditch was re-lined in 1923, and the water was diverted back into the original 1904 alignment (Dagher and Dega 2019). In either case, Site T-3 appears to correspond to the route of the ditch shown on maps as early as 1912 (see Figure 40). The newer alignment of the Honokōhau Ditch that it connects to, *mauka* of the current study area, is carried across Kanaunau Gulch by a metal flume and wooden trestle (Figure 82), and is tunneled through the ridge slopes on both sides (Figure 83). Honokōhau Ditch was assigned the SIHP designation Site 50-50-01-1591 by Dagher and Dega (2019).

# **Onepeha Gulch Survey Area**

The Onepeha Gulch Survey Area consists of the lands encompassed by Onepeha Gulch, which extends roughly 1.6 kilometers west from the eastern boundary of the study area to Honokōwai Reservior, and ranges from 20 meters to 100 meters wide (see Figure 56). The gulch is flanked by *kula* lands on either side. Onepeha's meandering streambed is ephemeral in nature and was completely dry at the time of the current fieldwork. Vegetation within the gulch, which was not used for the cultivation of either sugarcane or pineapple, consists primarily of low grasses with a tall canopy of *koa haole*. To accomplish the survey of Onepaha Gulch, all five fieldworkers walked from east to west following the stream bed, spaced across the entirety of the gulch itself. A single, previously unidentified historic property was identified within Onepeha Gulch as a result of the survey (Site T-2), consisting of an enclosure remnant situated within the *mauka* portion of the *'ili* of Mo'omuku ,which was awarded to Kekau'ōnohi as '*Āpana* 3 of LCAw. 1126 during the *Māhele 'Āina* of 1848.

# Site T-2

Site T-2 consists of rectangular enclosure remnant situated in the eastern portion of Mo'omuku 'Apana 3 (Figure 84), along the top northern edge of Onepeha Gulch in the northeastern portion of the study area (see Figure 56). Site T-2 is situated on a relatively level area that slopes gently southward to the base of the gulch (Figure 85). The eastern end of the enclosure has been bulldozed away. In its current form Site T-2 measures 13.5 (east/west) meters long by 11.5 (north/south) meters wide overall. The three extant walls of the enclosure (northern, western, and southern) are constructed of dry-stacked medium to large subangular basalt cobbles, the exterior of which are somewhat collapsed in sections, particularly along the northern and western walls (Figure 86). However, some remnant stacking is still evident within the interior sections of those particular walls, while the south-facing exterior wall also maintains some semblance of intact stacking. Exterior wall heights range from 0.35 to 0.60 meters, while interior heights average 0.30 meters. Wall widths measure roughly between 1.3 meters and 1.6 meters, with wider wall heights characterizing collapsed sections (Figure 87). The interior portion of the enclosure consists of a thick cover of buffelgrass and Guinea grasses beneath scattered koa haole overlying a thin layer of soil embedded with small cobbles. The eastern portion of the site has been partially destroyed by prior land disturbance, and is lined along the former location of the enclosure's eastern wall with a mechanically-pushed berm comprised of soil and large, jumbled boulders intermixed with concrete pipe fragments (Figure 88). Prior mechanical disturbance is also apparent in the immediate vicinity of Site T-2 to the southwest, as evidenced by a bulldozed push pile of large boulders marked by dozer scarring (Figure

89). Based upon the location of the enclosure remnant within a portion of the *'ili lele* awarded to Kekau'ōnohi as LCAw. 1126:28.3, coupled with the extant formal attributes of the site and its location along the edge of Onepeha Gulch, it is thought that Site T-2 may have functioned as a Precontact to early Historic habitation structure that was still present, and conspicuous enough to be mapped in 1912.

# Kanauau Gulch Survey Area

The Kanunau Gulch Survey Area consists of the lands encompassed by Kanaunau Gulch, which extends roughly 2.5 kilometers west from the eastern boundary of the study area to Honokowai Gulch, and ranges from 60 meters to 120 meters wide for most of its length (see Figure 56). Only a portion of this section of gulch is included within the study area, however. The middle section of gulch, measuring roughly 950 meters in length, crosses privately owned lands to the south of the study area. Kanauau Gulch is flanked by kula lands on its northern and southern sides. The Kanauau streambed was dry at the time of the current fieldwork, and the water flow for this tributary of Honokowai Stream appears to have always been intermittent in nature. The survey methodology for the slopes of Kanaunau Gulch was similar to that of Onepeha Gulch, with fieldworkers conducting cross-sloped east/west pedestrian transects spaced at a distance of no more than 10 meters. Although the gulch's highly eroded slopes and interior drainage channel were thickly vegetated with various grasses and *koa haole*, ground visibility was generally adequate for identifying any cultural features that may have been present. In the wider, interior portions of the gulch, ground visibility was excellent, and transects were surveyed at 10 to 15-meter intervals to cover broader expanses of land. As a result of the survey, two previously identified Precontact Period sites (Site 50-50-03-1207, a petroglyph complex, and Site 50-50-03-2487, an enclosure) were encountered within the western portion of Kanaunau Gulch, however only the former was concluded to be within the confines of the current study area (Site 2847 is not described in further detail here, but a detailed description of this site is presented in the discussion previous archaeological studies in the vicinity of the study area presented above). Slightly inland (east) of Site 2847, a Historic roadway/trail crossing Kanaunau Gulch was recorded as Site T-11. Both Site 1207 and Site T-11 are described in further detail below.

### Site 50-50-03-1207

Site 1207 consists of a complex of petroglyphs(see Figure 56) that was initially recorded in 1973 during the Statewide Inventory of Historic Places survey for the island of Maui by the Bernice Pauahi Bishop Museum. The site was assigned the State Inventory of Historic Places (SIHP) designation of Site 50-50-03-1207 and briefly described as "Site 1207, "Honokōwai Petroglyphs," consists of boulders covered with about 45 petroglyphs in an area of approximately 100 square meters (c. 1,076.40 feet) in Honokōwai Gulch." During the current fieldwork, Site 1207 was relocated and was found to consist of three distinct petroglyph panels (Panels 1 through 3; Figure 90) located on bedrock boulders/outcrops at the base of the southern slope of Kanauau Gulch adjacent to a waterfall area in the dry streambed. The northern edge of the gulch in the vicinity of Site 1207 (on the opposite side of the streambed) is a nearly vertical bedrock cliff, while the southern edge is more gradually sloped, and the area downslope of the site is relatively flat and level. A small grove of '*a* '*ali*'i trees is growing on the moderate gulch slope southeast of Site 1207. Approximately forty-six petroglyphs were identified at Site 1207, the overall condition of which ranged from poor and barely discernable to excellent and well-defined. The Statewide Inventory/Bishop Museum site tag/datum is still present at the site, consisting of a metal washer, marked with the site information, that is wedged into a crack between Panels 1 and 2.

Figure 90. Location of Site 1207, showing the relative locations of Panels 1, 2, and 3.

Panel 1 is situated on the westernmost side of the fractured bedrock boulder formation and is located approximately seven meters west of Panel 2 (Figure 91). This panel includes approximately 20 images pecked across six separate north-facing areas of the bedrock within a 1.8 by 1.6-meter area, with the highest concentration of petroglyphs occurring at the eastern end of the panel (Figure 92). The images depicted on Panel 1 are primarily anthropomorphic in nature, however several of these were indistinct and not clearly identifiable. The majority of anthropomorphic images are triangular bodies with downturned arms and legs. Three of these figures have what appear to be horns protruding from their heads, two of which are upturned and one that has horns that curve down towards the arms (Figure 93).

Panel 2 is situated on the easternmost side of the bedrock formation roughly seven meters east of Panel 1 (see Figure 91). This panel includes approximately 20 images pecked within two distinct areas on the northern face of the outcrop within a 3.0 by 2.5-meter area. The majority of the figures on this panel are anthropomorphic in nature and include a mix of stick figure and triangular forms. Several of the images are portrayed with arms that stretch above the head, forming an arc (Figure 95). A possible hammerstone was observed within a fractured outcrop crevice above a condensed area of pecking, and was left *in-situ*.

The Panel 3 petroglyphs occur on an independent bedrock outcrop approximately 15 meters southeast of Panels 1 and 2 (Figures 96). This panel contains roughly six anthropomorphic images pecked into the northern and eastern faces of the outcrop within a 2.5 by 1.8-meter area. Five of the petroglyphs displayed triangular-bodied characteristics, while one was representative of a stick figure form. Additional pecking was observed in several areas near the clearly defined figures, however these images were very faint, difficult to see, and problematic to classify based on their ambiguity.

Figure 96. Site 1207 Panel 3 petroglyphs, view to the west.

# Site T-11

Site T-11 is a Historic roadway/trail that crosses the Kanaunau Gulch Survey Area near its western end (see Figure 56). Site-11, which is terraced into both the northern and southern edges of the gulch, where it ascends/descends the steep slope, measures 1.5 to 2.0 meters wide, and given its width and construction style appears to have been designed for travel by horse or donkey; it is too narrow for vehicular use and wider than it would need to be for strictly pedestrian use, suggesting that this site may date to the early Historic Period, perhaps even prior to the Pioneer Mill Company's use of the Honokōwai lands. This U-shaped section of the former roadway/trail extends down the southern edge of Kanauau Gulch to the southeast, where it becomes practically indiscernible near the stream bed, and then turns to the northwest and ascends the northern side of the gulch. The trail is neatly lined with placed boulders along its downslope edge on the southern side of Kanauau Gulch (Figure 97), and on the northern the boulder-lined terraced edge along its downslope side has been enhanced with some stacked cobbles. A few fragments of firebrick and concrete are present in the Kanaunau Stream bed where Site T-11 would have crossed it, suggesting that a bridge may have once been present. On the *kula* slopes to the north and south of the gulch Site T-11 has been destroyed by more recent (Historic and Modern) plantation activity.

Figure 97. Site T-11, Historic roadway/trail along the upper southern edge of Kanauau Gulch, view to the northeast.

# Honokōwai Gulch Survey Area

Honokōwai Gulch extends *mauka-makai* through the central portion of the study area, bisecting it into northern and southern halves (see Figure 56). It stretches from the eastern boundary of the study area to the western boundary where it empties into a large, man-made retention basin and concrete flood channel. Most of this gulch is excluded from the current study area, however, and only portions of the less-steeply sloped, and more accessible, southern edge of the gulch adjacent to the eastern end of TMK: (2) 4-4-002:003—where an old road descends to the gulch bottom in the vicinity of the Pioneer Mill Company's Pump house R (see Figure 44)—were examined as part of the Honokōwai Gulch Survey Area. During the reconnaissance survey fieldwork, these accessible lower slopes on the southern side of Honokōwai Gulch were walked cross-slope from east to west with field technicians spaced at 5 to 10-meter intervals. The steep, upper gulch edges, which have slopes in excess of 60 percent, were not examined, nor were the more remote lower gulch slopes included with the study area, such as along the northern boundary of TMK: (2) 4-4-002:008, where there was no readily accessible access. Of the three gulches, Honokōwai contained the least amount of vegetation cover consisting primarily of various grasses and *koa haole*, with ground visibility being generally excellent for identifying any cultural features that may have been present.

#### 4. Fieldwork

Unlike the Onepeha and Kanauau gulches, Honokowai Gulch once contained a perennial stream, and as such was the focal point habitation and wetland (*lo'i*) agriculture within Honokōwai Ahupua'a during the Precontact/early Historic Periods. The streambed was dry at the time of the reconnaissance survey fieldwork, but traditionally numerous kuleana awards lined both sides of the stream, harnessing the water for growing taro in terraced fields. During the late 19<sup>th</sup> century, however, as the focus of commercial agriculture shifted to the adjacent *kula* lands and the Pioneer Mill Company began redirecting the water from Honokōwai Stream into the Honokōwai Ditch and sending it to the more southern plantation fields, residency and traditional agriculture within the Honokōhau Gulch rapidly declined. Since the gulch lands were never intensively cultivated during the Historic Period though-due to in large part their geographic isolation from the adjacent kula lands-numerous Precontact cultural features remain within Honokowai Gulch, some of which are currently cared for by the Maui Cultural Lands, Inc. (MCL), a grassroots land trust organization based on Maui (see https://mauiculturallands.org/projects/honokowai). MCL was briefly consulted at the outset of the fieldwork for the current study, and should be included in any future discussion of the management of sites within Honokowai Gulch. As a result of the current reconnaissance survey, five sites (Sites T-6 through T-10) were identified within the Honokowai Gulch Survey Area along the south-facing gulch slope adjacent to TMK: (2) 4-4-002:003 (Figure 98), all of which appear to date to the Precontact/early Historic use of the area. Four of these sites (Sites T-6 through T-9) are situated in close proximity to (south of) the former Pioneer Mill company's Pump House R (Figure 99), while the fifth (T-10) is situated along the southern gulch edge further to the west. Each of these sites is described in further detail below.

Figure 98. Detail map of Sites T-6 to T-10 recorded within the Honokowai Gulch Survey Area.

Figure 99. Pump House R, view to the northeast.

# Site T-6

Site T-6 consists of a linear retaining wall situated along the southern edge of the Honokōwai Gulch, approximately 160 meters southeast of Site T-10 (petroglyphs) and directly downslope (northwest) from the pump house access road (see Figure 98). The wall is constructed of small to large subangular basalt cobbles dry-stacked roughly five to six courses high and extends roughly perpendicular to the southern edge of Honokōwai Gulch towards the dry stream bed. It measures approximately 11.0 meters long by 0.3 meters wide, and ranges in height from 1.0 to 1.4 meters (Figure 100). Both the eastern and western ends of the wall terminate at large boulder outcrops. While the majority of the wall is intact and exhibits relatively nice facing (Figure 101), portions of the downslope wall face are collapsed, largely due to the degree of the slope and overgrowth of large sisal plants. No cultural material was observed at the site.

# Site T-7

Site T-7 consists of a modified outcrop situated along the southern slope edge of the Honokōwai Gulch, approximately 43 meters northwest of Site T-8 (wall and modified outcrop) and 12 meters south of the pump house access road (see Figure 98). This site consists of a natural bedrock outcrop that has been modified by loosely stacking medium to large subangular basalt cobbles and small boulders to form a terrace (Figure 102). The modified portion of the outcrop measures 2.4 meters long (east/west) by 1.1 meters wide (north/south) and has an average height of 1.4 meters (Figure 103). No cultural material was observed at the site.

# Site T-8

Site T-8 consists of a low, linear wall and adjacent modified outcrop along the southern, interior edge of Honokōwai Gulch, located approximately 9 meters northwest of Site T-9 and 40 meters southeast of Site T-7 (see Figure 98). The northernmost portion of the site, consisting of the wall, begins at the southern edge of the pump house access road (Figure 104) and extends upslope and to the south for a distance of 15 meters. The wall is constructed of dry-stacked large cobbles and small to large subangular basalt boulders and averages 1.2 meters in width with a maximum height of 1.25 meters (Figure 105). Overall, the wall is in fair to good condition, with some portions of wall retaining neatly-stacked faces, particularly along its west-facing edge. However, much of the wall is collapsed on either side due to its precarious location on the steeply-sloped gulch edge. At its southern termination, the wall abuts a bedrock outcrop (Figure 106), the northern edge of which has been modified with stacked small to medium-sized cobbles to form the front face of a terrace that measures approximately 18 meters in length (Figure 107). No cultural material was observed at the site.

Figure 100. Site T-6, retaining wall, view to the southwest.

Figure 101. Site T-6, retaining wall, view to the southwest.

Figure 102. Site T-7, modified outcrop, view to the east.

Figure 105. Neatly stacked western face of Site T-8 wall, view to the southeast.

Figure 106. Site T-8 wall abutting northern face of modified outcrop, view to the southeast.

Figure 107. Front face of Site T-8 modified outcrop, view to the south.

#### Site T-9

Site T-9 consists of two petroglyph panels (Panels 1 and 2) situated on a vertical bedrock outcrop along the steeply sloping southern edge of Honokōwai Gulch, approximately 45 meters southeast of the pump house and 9 meters southeast of Site T-8 (see Figure 98). Vegetation in the area consists primarily of various grasses, shrubs, and scattered *koa haole* trees. A total of approximately 12 petroglyph images were identified at Site T-9, the condition of which ranged from poor to excellent. No cultural material was observed at the site.

Panel 1 is situated on the westernmost side of the bedrock formation and is located approximately 8 meters west of Panel 2. This panel includes approximately 11 images pecked across a 2.0-meter-wide by 1.8-meter-tall area. The images depicted on this panel are exclusively anthropomorphic stick figure types with downturned arms and legs (Figure 108).

Panel 2 is situated approximately 8 meters east of Panel 1 and contains a single anthropomorphic image that measures 0.29 meters wide by 0.32 meters tall. The petroglyph consists of a bolded, triangular-bodied anthropomorphic male figure with outstretched arms and a wide-legged stance (Figure 109).

### Site T-10

Site T-10 consists of two anthropomorphic figures pecked into the northern face of an exposed, fractured, vertical bedrock outcrop situated along the steep, southern edge of Honokōwai Gulch (see Figure 98). The petroglyph on the western side of the outcrop consists of a stick figure with downturned arms and legs, with the head portion of the image pecked into a fractured section of the bedrock (Figure 110). The other figure is located slightly to the east, and consists of a very well defined triangular-bodied figure with downturned, rounded arms, a muscular leg shape, and an ambiguous, roughly hourglass-shaped pecked protrusion jutting downwards from between the legs (see Figure 110). Interestingly, the figure's hands differ from other similar anthropomorphic petroglyphs in that they are pecked into a ball shape, and the figure's feet are elongated and thick. No cultural material was observed at the site.

Figure 108. Site T-9 Panel 1, view to the southwest.

Figure 109. Site T-9 Panel 2, view to the southeast.

Figure 110. Site T-10, petroglyphs, view to the south.

# 5. RECOMMENDATIONS

The archaeological reconnaissance fieldwork conducted for the current study provided insights and data that were used to formulate the following recommendations regarding the historic preservation review process for the proposed DHHL Honokōwai Community and future archaeological study within the proposed project area.

With respect to the review of the proposed project under Hawai'i Revised Statutes Chapter (HRS) 6E-8, the Department of Land and Natural Resources-State Historic Preservation Division (DLNR-SHPD) will need to be consulted, and an archaeological inventory survey (AIS) pursuant to Hawai'i Administrative Rules (HAR) 13§13-275 may be required due to the presence of historic properties (Table 4). The AIS will need to be conducted in accordance with HAR 13§13-276 to document and evaluate the sites for historic significance, make treatment recommendations, and determine any project effects to the sites. Additional fieldwork will likely be required to document the identified sites to HAR 13§13-276 standards. This would include the detailed recordation of surface features as well as limited subsurface testing at select sites. It is recommended that DHHL consult with DLNR-SHPD to establish an appropriate project area as defined in HAR 13§13-275, as this will determine the scope of the additional work required to complete the AIS. Native Hawaiian Organizations and community groups, such as Maui Cultural Lands, Inc., should also be consulted regarding the project in an effort to mitigate any potential impacts from the proposed development to off-site historic properties present within Honokōwai Gulch.

In the *kula* lands of the current study area, decades of continuous commercial agricultural activities have adversely impacted the integrity of the pre-existing traditional cultural landscape; however, archaeological sites representing the vestiges of both pre-commercial use of the study area lands and commercial sugarcane cultivation were identified during the current study. Additional fieldwork for the AIS in the *kula* lands would likely involve the detailed recordation of Sites T-3, T-4, T-5, T-11, T-12, and T-13, as well as the other plantation infrastructure still present within the selected project area, such as roads, ditches, reservoirs, and water tanks. It is likely that the inventory of these features will result in a recommendation of "no further work," and will essentially complete the Historic preservation review process for the *kula* lands, unless DLNR-SHPD requests additional work. If the *kuleana* parcels in the current study area will be included in the development plan, subsurface testing is recommended at LCAw. 4249:1, which appears relatively undisturbed and is considered to possess archaeological potential. The other *kuleana* parcels in the *kula* lands appear to have been heavily disturbed and are not considered likely to contain intact subsurface deposits.

Within Onepeha and Kanauau gulches, potentially significant archaeological sites (Sites T-2, T-11, and 1207) were identified within the current study area. Development in the vicinity of these gulches, and on the *kula* lands directly above them, could impact these sites. It is also possible (although unlikely) that additional sites are present that were not identified during the current reconnaissance study in areas of difficult terrain or thick vegetation. If development plans include these gulches or will impact the *kula* lands bordering them, the AIS should include additional survey in the gulches and detailed recordation of all identified sites. In particular, additional documentation

and subsurface testing is recommended Site T-2, the habitation site likely associated with Mo'omuku *Lele* 3, which was awarded to Michaela Kekau'ōnohi (the granddaughter of Kamehameha I and wife of Kamehameha II) during the  $M\bar{a}hele$  ' $\bar{A}ina$  of 1848. Again, consultation with DLNR-SHPD to establish an appropriate project area for the purposes of the AIS is recommended due to the presence of other known sites (e.g., Site 2487) in these gulches that were near, but outside, the current study area.

The majority of Honokōwai Gulch is excluded from the proposed project, but the accessible lower slopes on the southern side of the gulch were investigated during the current study. Sites identified within Honokōwai Gulch include remnant plantation infrastructure as well as Precontact archaeological sites (T-6, T-7, T-8, T-9, and T-10). Because portions of the steep gulch sides included in the current study area were difficult to access, Honokōawai Gulch may contain additional sites that could be considered historically or culturally significant. As with Onepeha and Kanauau Gulches, development activities adjacent to Honokōwai Gulch could potentially affect these sites. Again, consultation with DLNR-SHPD to determine an appropriate project area for the AIS is recommended. During the AIS, additional survey of the gulch sides and documentation of identified sites would be included in the AIS fieldwork.

As a final note, it is recommended that planning for the proposed project begin to incorporate the findings of this archaeological reconnaissance survey, even at this preliminary stage in the historic preservation review process. It is likely that as a result of the HRS 6E-8 review, preservation will be the recommended treatment for all or most of the sites within Honokōwai, Onepeha, and Kanauau gulches, and that a preservation plan for those sites will need to be prepared in accordance with HAR 13§13-276. Consultation with stakeholders and community members is also recommended going forward to ascertain how these historic properties might be incorporated into development plans. At a minimum, it is recommended that Maui Cultural Lands, Inc. (MCL), a grassroots, community, land trust organization that currently cares for several important cultural sites within Honokōwai Gulch be included in any future discussion of the management of the sites within Honōkowai Gulch and Kanaunau Gulch. The petroglyph sites within both of these gulches (T-9, T-10, and 1207) are likely to be assessed as significant under criterion "e" for their traditional cultural value, a significance assessment that requires consultation with knowledgeable (Native Hawaiian) individuals and organizations. MCL was briefly consulted by the authors of this report prior to the outset of the current fieldwork. Within Onepeha Gulch, Site T-2's association with Michaela Kekau'ōnohi also makes it a likely candidate for preservation and interpretation.

If all historic properties in the study area are treated in accordance with the above recommendations, and in accordance with any DLNR-SHPD guidance, it is anticipated that the project can avoid causing significant adverse impacts to historic resources. Based on the findings of this archaeological reconnaissance survey, given that the above recommendations are followed, the determination of effect for the proposed project (pursuant to Hawai'i Administrative Rules 13§13-284-7) will likely be "effect, with agreed upon mitigation commitments."

# Executive Summary

Date	August 31, 2020
Project	Honokōwai Master Plan
Project Proponent	Department of Hawaiian Home Lands (DHHL)
Proposed Action	The Honokōwai Agricultural Homestead Community Master Plan encompasses all 777 acres of DHHL lands at Honokōwai. The primary focus of the master plan is to develop subsistence agricultural homestead lots that range from one-half-acre to three-acres in size. Beneficiaries will be required to cultivate their lots. Home construction is optional; therefore, pre-qualification for a home loan is not required. The plan designates land for community-use. This may include an agriculture training center, a processing facility and a farmer's market. Areas for community agricultural enterprises could also be included in the master plan. Land specifically designated for conservation buffers would be along the edges of all gulches and setback from Honoapi'ilani Highway. Community land use lots would be located on the <i>makai</i> (coastal region) portion of the parcel and may include: the agriculture training center/community center, mini-parks, churches, a charter school, and an adult and/or child day care center. Multi-family housing may include <i>kupuna</i> (senior) housing on the <i>makai</i> portion of the parcel. Lands would be set-aside for the development of roads, bike paths, and drainage-control measures. The amount of land allocated to each use and their specific locations are still being determined.
Project Area and Region	The potential area of direct effect, or project area, is considered to be 777-
of Influence	acre development footprint located in Honokōwai Ahupua'a, Kā'anapali Moku, Lāhainā Modern Tax District, Maui Island.
	When assessing the presence or absence of direct and indirect effects of the proposed project on the traditional cultural practices of a region, traditional use and access to resources from the mountains to ocean- mauka (mountain region) to makai- must be taken into consideration. As such, the region of influence, or study area for the proposed project is defined as the geographic area encompassed by the known traditional boundaries of Honokōwai Ahupua'a.
Results	Based on testimony for Kuleana claims presented before the Land Commission during the Mahele 'Āina, and in addition to the stories and information gathered during the background research and consultation completed for this study, it is apparent that settlement and land use within Honokōwai Ahupua'a functioned in the typical traditional sense, with a focus on marine resource gathering within the off-shore waters and along the coastline, as well as cultivation of 'uala (sweet potato), mai'a (banana), and kalo (taro) in the mauka reaches.
	With regards to the current project area, there are no specific traditional cultural practices or cultural sensitivity concerns within the development footprint. Additionally, there are no known historically significant archaeological sites requiring additional mitigation work within the development footprint.

According to those consulted for this study, the most prominent and significant cultural practice within the vicinity of the current project revolves around the coastal marine resources. Concerns were expressed surrounding the effects of coastal runoff from the construction of the project and the lifetime of the development. Those consulted for the project suggested using a variety of mitigation techniques. Other concerns for the project included water usage and the origin of the water that will be supplied to residents within the project. An additional concern was raised regarding the location of the project, and its effect on the health of residents due to the close proximity of the development to the sewage treatment plant.

## Acknowledgments

Many thanks go out to the various individuals who shared their personal life experiences and traditional knowledge for this study. The information shared helps to reconstruct the traditional way of life in Honokōwai and demonstrates how lifestyles, particularly relating to Hawaiian traditions and cultural practices, have evolved.

Most importantly, it is with sincerest gratitude and fondest aloha that we thank the following individuals who have contributed greatly to our understanding of traditional cultural practices related to the lands and waters of Honokōwai Ahupua'a: Ekolu and Puanani Lindsey, Junya Nakoa, Blossom Feteira, Kaimaile Makekau and Foster Ampong. *Mahalo a nui* for taking time out of your day to share your *mana'o* (thoughts) and concerns.

## 1.0 INTRODUCTION

The Department of Hawaiian Home Lands (DHHL) proposes to develop a master plan for an agricultural homestead community in Honokōwai Ahupua'a, Kā'anapali Moku, Lāhainā Modern Tax District, Maui Island. The Honokowai Agricultural Homestead Community Master Plan encompasses all 777 acres of DHHL lands at Honokowai. The primary focus of the proposed master plan is to develop subsistence agricultural homestead lots that range from one-half-acres to three-acres. Beneficiaries will be required to cultivate their individual lots; therefore, home construction is optional and pre-qualification for a home loan is not required. The plan designates land for community-use. This may include an agriculture training center, a processing facility, and a farmer's market. Areas for community agricultural enterprises may also be included in the master plan. Land specifically designed for conservation buffers would be along the edges of all gulches and setback from Honoapi'ilani Highway. Community land use lots would be located on the makai (coastal region) portion of the parcel and may include: the agriculture training center/community center, mini-parks, churches, a charter school, and an adult and/or child day care center. Multi-family housing may include kupuna (senior) housing on the makai portion of the parcel. Lands would be set-aside for the development of roads, bike paths, and drainagecontrol measures. The amount of land allocated to each use and their specific locations are still being determined.

As a part of the Environmental Assessment (EA) process for the proposed project, at the request of the DHHL, 'Āina Archaeology conducted a study of traditional cultural practices within and adjacent to the proposed project. The Guidelines for Assessing Cultural Impacts adopted on November 19, 1997 by the Environmental Council, State of Hawai'i states:

(For) the cultural portion of an environmental assessment, the geographical extent of the inquiry should, in most instances, be greater than the area over which the proposed action will take place (proposed project area). This is to ensure that cultural practices which may not occur within the boundaries of the project area, but which may nonetheless be affected, are included in the assessment.... An ahupua'a is usually the appropriate geographical unit to begin an assessment of cultural impacts of a proposed action, particularly if it includes all of the types of cultural practices associated with the project area. (State of Hawaii Office of Environmental Quality Control 2012:11)

For this cultural impact assessment, the *ahupua'a* of Honokōwai is considered the overall "study area" while the development footprint of the Project is identified as the area of potential direct effect (project area). The purpose of this document is to gain an understanding of traditional cultural practices within the study area and identify any potential effects on these practices that may occur during, or as a result of, the implementation of the proposed project.

Cultural Impact Assessment for the Department of Hawaiian Home Lands Honokōwai Master Plan Final – 6/10/2021

## 2.0 ENVIRONMENTAL SETTING

## 2.1 NATURAL ENVIRONMENT

The current study area within Honokōwai Ahupua'a follows the western shoreline of Kā'anapali Moku, from Pu'u Keka'a (Black Rock Beach) to just south of the West Maui Airport, and extends 10,000 feet inland to an approximate elevation of 400feet above mean sea level (amsl). Situated on the leeward flanks at the base of the West Maui Mountains, the Honokōwai Gulch and surrounding lands are the primary topography over which the soils of the current project area have formed.

The general soils of the project area are of the Pulehu-Ewa-Jaucas association found on the Honokōwai coast, and the Waiakoa-Keahua Moloka'i association found *mauka* (mountain region) of Honokōwai (University of Hawaii Agricultural Experiment Station 1971). The Pulehu-Ewa-Jaucas association is located on alluvial fans and basins and can be described as nearly level to moderately sloping, well-drained and excessively drained soils that are developed in alluvium and weathered in basic igneous rock, coral, and seashells (Foote et al. 1972:8). Soil units of the Waiakoa-Keahua-Molokai association are located on low uplands and described as moderately deep, nearly level to moderately steep, and well-drained soils that are formed in weathered basic igneous rocks. At the time of the soil survey, these associations were deemed appropriate for sugar cane, pineapple, truck crops, pasture, wildlife habitat, and homesites (Foote et al. 1972:8-9).

More specifically, the individual soil units of the project area are dominated by the Lāhainā silty clay loam (3-7% slopes-LaB), Lāhainā silty clay (7-15% slopes-LaC), Moloka'i silty clay loam (3-7% slopes-MuB), and Rock land (rRK), and with smaller acreages of Ewa silty clay loam (0-3% slope-EaA), and beaches (BS). The Lāhainā series are defined by well-drained upland soils. Lāhainā silty clay loam occurs to the north of the Honokōwai Gulch, and a representative profile of the surface layer is a dark reddish-brown silty clay about 15 inches thick followed by 45 inches of a dusky-red and dark reddish brown subangular blocky silty clay and silty clay loam. The substratum is soft, a weathered basic igneous rock. Permeability is moderate, runoff is slow, and the erosion hazard is slight. The available water capacity is about 1.3 inches per foot in the surface layer and about 1.4 inches per foot in the subsoil. In certain places, roots penetrate to a depth of five feet or more. The Lāhainā silty clay (LaC) occurs both north and south of the Honokōwai Gulch; its runoff is medium, and the erosion hazard is moderate (Foote et al. 1972:78-79). The Moloka'i series consists of well-drained upland soils. Moloka'i silty clay loam (MuB) has slow runoff, and the erosion hazard is slight to moderate and is located south of the Honokōwai Gulch (Foote et al. 1972:96).

Rock land occurs in the areas immediately bounding the Honokōwai Gulch. Rock land (rRK) typically includes areas where exposed rock covers 25 to 90% of the surface. Rock outcrops are made mostly of basalt and andesite, and having very shallow soils are the main characteristics

of this soil type. Lower elevation vegetation includes *kiawe* (*Prosopis pallida*), *kou* (*Cordia subcordata*), *pili* (*Heteropogon contortus*), Japanese tea, and *koa haole* (*Leucaena leucocephala*), while higher elevation includes Lantana, guava, Natal redtop, and molasses grass. The soil material associated with rock lands are very sticky and plastic-like with a high shrink-swell potential. At the time of the soil survey, this land had been used for pasture, wildlife habitat, and water supply. Rock land is also commonly used in urban development and buildings. On steep slopes these larger constructions are susceptible to sliding when the soil is saturated, and foundations and retaining walls are susceptible to cracking (Foote et al. 1972:119).

Finally, a small portion of the coastal sections include Ewa silty clay loam (EaA) and beaches (BS). Ewa series soil include well-drained soils in basins and on alluvial fans. The Ewa silty clay loam has slow runoff and the erosion hazard is no more than slight. This soil is used for sugarcane and homesites (Foote et al. 1972:30). Beaches include sandy, gravely, or cobbly areas washed by waves. Typically, beaches are suitable for recreational use or resort development and have no farming value (Foote et al. 1972:28).

The overall climate and rainfall in the area falls at the base of the West Maui Mountains, which extends from the summit and runs down the deeply incised valleys, extending leeward from Kā'anapali to Lāhainā. These cone-shaped peaks capture wind from any direction and funnel air towards the summit; therefore, resulting in an annual rainfall maximum of well over 354 inches (Giambelluca et al. 1986). Average overall rainfall across the project area is approximately 33.74 inches a year, with the heaviest from November to April (a time period called Ho'oilo), which is associated with cooler temperatures and infrequent trade winds causing periodic rainfall; and, little to no rainfall from May to October– during a time period called Kau that is associated with warmer temperatures and steady trade winds (Giambelluca et al. 2013). The above results in topography that consists of gentle to steeply sloping hillsides cut by the Honokōwai Gulch.

The above soils, topography, and rainfalls patterns once sustained a lowland dry and mesic forest, woodland, shrubland, as well as a lowland dry shrubland and grassland at the base of the West Maui Mountains (Pratt and Gon III 1998:122). Prior to human modification, these lands would have supported *pili* (*Heteropogon contortus*) or *kāwelu* (*Eragrostis variabilis*) with shrublands of 'a'ali'i (Dodonaea viscosa), 'ākia (Wikstroemia species), *ko'oko'olau* (Bidens species), 'ūlei (Osteomeles antbyllidifolia), and other shrubs. The dry forests would have included 'ōhi'a (Metrosideros polymorpha), koa, lama (Diospyros sandwicensis), wiliwili (Erythrina sandwicensis), and other various trees. The mesic forests would include 'ōhi'a, koa or lama. Olopua (Nestegis sandwicensis) or balapepe (Pleomele species) were less commonly found in gulches, and on lower slopes and less-disturbed sites. During traditional Hawaiian settlement, these forested areas would have been used to harvest *pili* for thatch material, and to gather hardwoods and medicinal plants. Some of the mesic forest areas were later converted to dryland *kalo* (taro) and *'uala* (sweet potato) agriculture (Pratt and Gon III 1998:127). By the 19<sup>th</sup> century

however, much of these lands were converted for sugar cane milling, which resulted in changes for the dominant agriculture area (see 3.2.3).

## 2.2 BUILT ENVIRONMENT

While most of the project area remains undeveloped, the area *makai* of the study region has been dramatically changed by urban development in the past century (see section 3.3.2). Modern infrastructure includes the four-lane Honoapi'ilani Highway, which borders the project area to the northwest and the Kapalua Airport to the north. The coastal region to the west of the project area is studded with condos, hotels, resorts, and public parks. The Lāhainā Sewage Treatment Plant is located just south of the project area.

## 3.0 CULTURAL HISTORICAL BACKGROUND

The division of Maui's lands into political districts occurred during the rule of Kaka'alaneo, under the direction of his *kahuna*, Kalaiha'ōhi'a (Beckwith 1970:383). This division resulted in the creation of twelve districts or *moku* during traditional times: Kula, Honua'ula, Kahikinui, Kaupō, Kīpahulu, Hāna, Ko'olau, Hāmākua Loa, Hāmākua Poko, Na Poko or Na Wai Eha (Wailuku), Kā'anapali, and Lāhainā (Alexander 1882; Sterling 1998:3). The *moku o loko*, or *moku* as it is most commonly called, literally means "to cut across, divide, separate" (Lucas 1995:77). When used as a term of traditional land tenure, a *moku* is similar to a modern political district.

Within these *moku* are smaller units of land called *ahupua'a*, the name of which is derived from the Hawaiian term *ahu* (altar), which were erected at the points where the land boundary intersected the *alaloa* (main road encircling the island), upon which a carved *pua'a* (hog) image made of *kukui* wood and stained with red ochre was placed along with the tax of food items from that particular land unit as payment to the *ali'i* (chief) during the annual progression of the *akua makahiki* (Alexander 1882:4).

The typical configuration of the *ahupua'a* extends from the sea to the mountain so that the *ali'i* and *maka'āinana* (native tenant) could have access to resources of the *wao lā'au* or *wao nahele* (forested region), the *wao 'ama'u* and *wao kanaka* (cultivated land), and the *kula uka* and *kula kai* (the lower grasslands and shoreline) (Alexander 1882:4; Mueller-Dombois 2007). While the boundaries of an *ahupua'a* generally followed prominent landforms (i.e., ridge lines, the bottom of a ravine, a depression in the earth), there were times where a stone or rock that was notable from a tradition or sacred use would mark a corner or determine a line (Alexander 1890:105-106). Along similar lines, the growth of a certain kind of tree, herb or grass, or the habitat of a certain kind of bird would sometimes define a division (Alexander 1890:105-106).

The general area of this study is the *ahupua'a* of Honokōwai, which is situated on the northwest side of the West Maui mountain range in the *moku* of Kā'anapali. Kā'anapali is comprised of eleven *ahupua'a*, which, from north to south, include: Honokōhau, Honolua, Honokahua, Nāpili, Honokeane, Alaeloa, Mailepai, Kahana, Māhinahina, Honokawai and Makaiwa.

Honokōwai was once home to hundreds of *'ohana* (families) that lived in the *ahupua'a* under the stewardship of Ke'eaumoku Pāpaiahiahi. After his passing, Honokōwai was transfered to Ke'eaumoku "George Cox" and then John Adams Kaluaikonahale Kuakini. At the onset of the Great Mahele, Honokōwai was set aside as Crown Lands that were then divided into some 70 Royal Patent Grants (see section 3.2.1.2).

Figure 3-1: A portion of the 1885 Dodge map of Maui highlighting Honokōwai Ahupua'a (outlined in blue) in relation to the traditiona moku of Kā'anapali

# 3.1 HE MAU MOʻOLELO NO HONOKŌWAI AHUPUA'A I KA WA KAHIKO – TRADITIONS OF THE HONOKŌWAI REGION PRIOR TO WESTERN ARRIVAL

The island of Maui has been known by several names throughout history and across the *pae 'āina*. The ancient name of Ihikapalaumaewa, after the child of Wakea and Papa who is the ancestral origin of the people of Maui, was once attributed to the island of Maui. Maui has also been referred to Kulua for the two prominent volcanoes that comprise the island, Nā Hono-a-Pi'ilani for Pi'ilani, the great 16<sup>th</sup> Century chief of Maui, and Maui Nui a Kama for Kamalalawalu the grandson of Pi'ilani (Kapiikauinamoku 1956; Sterling 1998:1). An origin story of the Hawaiian people speaks to the creation of their islands as being born to the gods Papa and Wakea. In the ancient *oli* (chant) that tells this origin story, Hawai'i Island is first to be born, followed by Maui, and then the rest:

Hanau o Maui he moku, he aina, Na kama o Kamalawalu e noho. Maui was born an island, a land, A dwelling place for the children of Kamalalawalu.

(Fornander 1916:2-3)

In this chant, Maui is called, "a dwelling place for the children of Kamalawalu," who was the grandson of Pi'ilani, a  $16^{th}$  century  $M\bar{o}'\bar{\tau}$  (paramount ruler) of Maui and founder of one of its greatest dynasties (Barrere 1975:1). Thus, the traditional poetic name for Maui as Maui-a-Kama, named after Kamalawalu, whose children are the people of Maui. It's because of them that we have the ability to know the historical names, *mo'olelo* (traditional stories), cultural sites, and practices of the area in and around Honokōwai.

### 3.1.1 Wahi 'Inoa

In Hawai'i, names were given to virtually everything. In the preface of *Place Names of Hawaii*, Samuel Elbert states that:

Hawaiians named taro patches, rocks and trees that represented deities and ancestors, sites of houses and heiau, canoe landings, fishing stations in the sea, resting places in the forests, and the tiniest spots where miraculous or interesting events are believed to have taken place.

Place names are far from static ... names are constantly being given to new houses and buildings, land holdings, airstrips, streets, and towns and old names are replaced by new ones ... it is all the more essential, then to record the names and the lore associated with them (the ancient names) now. (Pukui et al. 1974:x)

Intrinsic in these statements of Elbert is the knowledge that the oldest place names held meaning and could tell the story of an area, or recorded the resources of a particular place, prior to European contact. A study of the place name meanings for the study area may yield some insight into the stories, patterns of life, and land use within Honokōwai. Lyons notes that as a consequence of the long tenancy of the people on land, "every piece of land had its name, as individual and characteristics as that of its cultivation" (C. J. Lyons 1903:23). The place names listed below are for land areas, fisheries, land divisions, markers, and other resources specific to Honokōwai. These areas were identified through research of the Māhele 'Āina documents and

other available map resources (Dodge 1885; Ho 1940; Monsarrat and Kahookele 1912; U.S. Geological Survey 1992), as well as, consultation with *kama'āina (native-born)* and *kūpuna* (elders) of the region. Unless indicated otherwise, the spelling, orthography, and translations presented below are adapted from Pukui and others (1974).

	Table 1.	Place	Names	in	Honokōwai
--	----------	-------	-------	----	-----------

Aipopoʻo ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3688 Apa. 3 to Meeau and LCA 3930 Apa. 4 to Nauwele. Also written "Aipohopoho" in foreign testimony.
Amalu (stream)	Stream, Lāhainā qd., West Maui
'Eke (peak)	Crater and peak (4,480 feet high), near the border between Lāhainā and Wai-luku qds., West Maui.
Haʻenanui ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 4549 to Amai and LCA 76 to William Shaw. It is noted that Haenanui was a farm given to him by Hoapili Wahine (LCA 76).
Ha'ena'iki ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3765 Apa. 5 to Aio, 6459 to Keokeo, LCA 6460 to Kaihe, LCA 6601 Apa. 2—3 to Piimoku (spelled "Haaeniki"), LCA 6722B Apa. 1 to Mai (spelled "Haaeneiki), LCA 6741 Apa. 2 to Inoa.
Honoapiʻilani (highway)	Highway around southwest Maui. <i>Lit.: bays</i> [acquired] by [Chief] Pi'ilani. Six West Maui bays whose names begin with Hono- (bay) and the islands seen from them (Kaho'olawe, Lāna'i, Moloka'i) were ruled by Pi'ilani and are famous in son; the six bays are Honokahua, Honokeana, Honokōhau, Honokōwai, Honolua, Hononana. Pi'ilani's daughter Pi'ikea, married 'Umi in the early 1500s.
Honokōwai (ahupua'a, stream, plantation camp, point)	Lit., bay drawing water One of six famous West Maui bays whose names begin with the word hono, or bay. Collectively they are known as Nā Honoaapi'ilani, "the bays acquired by Pi'ilani" (a chief). Land section, ditch, point, stream, beach park, Lāhainā qd., Maui
llikikoo ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3689 Apa. 1 to Maui, LCA 3765 Apa. 4 to Aio ("Ilikikoa"), LCA 3852 Apa. 2 to Pokole (written "Uilikiko" in Buke Mahele), LCA 3988 Apa. 4 to Hilahila, LCA 4249 Apa. 3 ("Uilikiko") to Kameeui Documented as "Uilikiko" in LCA 3852 and LCA 4249, and "Ilikikoa" in LCA 3765.
Kā'anapali ( <i>moku</i> )	<i>Lit.</i> Kā'ana (the division) cliff Beach, Kā'anapali, Maui. Wide calcareous sand beach fronting the Kā'anapali resort complex. Pu'u Keka'a, a cinder cone more commonly known as Black Rock, divides the beach into two sections. The center of the south section between Hanak'o'o Beach Park and Pu'u Keka'a is also known colloquially as Dig Me Beach, while the north section between Pu'u Keka'a and Honokōwai Point is known as North Beach (Clark 2002)

Kaelepuni ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 4248 Apa. 3 to Kekalohe and LCA 6601 Apa. 6 to Piimoku
Kahanaiole ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3925D Apa. 2 to Hualii
Kane'au'au ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 5005 Apa. 2 $-3$ to John White
Kapili ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3192 Apa. 1 to Kahinu, LCA 3850 to Paki, LCA 3925 to Nahuli, LCA 3932 Apa. 7 to Nalepo, LCA 3987 Apa. 2 to Holona, LCA 4239 Apa. 3, 4, 7—9 to Kaukau, LCA 4248 Apa. 3 to Kekalohe, LCA 4254 Apa. 3 to Kaumaumau, LCA 5002 Apa. 4—6, 9 to Kahanaumaikai, LCA 5121 Apa.2 and 3 to Kane, LCA 6539 Apa. 2, 3 to Hoonoho
Kaulalewalewa (mountain)	A mountain (2,980 feet elevation), Lāhainā, Maui
Kipapa ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3689 Apa. 2 to Maui, LCA 4244 to Kuemanu, LCA 4260 Apa. 2 to Kaluaiuka
Kou ( <i>ʻili</i> )	An 'ili associated with LCA 327B Apa. 2 to John Previer, within Waihale
Kumukahi ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 327B Apa. 6 to John Preever, within Waihale
Loainalu ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 4793B to Hanuna whereby kalo is cultivated. William Shaw notes in LCA 76 Apa. 2 that the 'āina is a farm given to him by Hoapili Wahine (spelt. "Loinui)."
Maele ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3925B to Pulali (misspelt "Maili") and LCA 3925H Apa. 1 to Kaaha.
Makahiku ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3766 Apa. 5 to Akaku, LCA 3847 Apa. 1 to Puhi, LCA 3927 Apa. 3—5 to Nakoholua, LCA 3932 Apa. 8 and 10 to Nalepo, and LCA 4260 Apa. 1 to Kaluaiuka. Misspelt occasionally "Makahiki".
Mo'omuku ( <i>'ili</i> )	An <i>'ili kū</i> in Honokōwai that belonged to Kekauonohi (LCA 11216:28). Identified as "he ili hookahi ilaila" in Honokōwai. Portions appear in the following LCAs: LCA 3765 Apa. $1-3$ to Aio, LCA 3851 to Napoohiwi, LCA 3925E Apa. $1-3$ to Kanealii, LCA 3932 Apa. 9 to Nalepo, LCA 4552 Apa. 2, 4, 6 to Aumai, LCA 4793B Apa. 3 to Hanuna, LCA 4923 to Kalua, and LCA 5120 to Kauwealoha. Occasionally misspelt. "Moomoku".
Nāpili	Lit., the joinings or pili grass. (RC 74). Bay and land section, Lāhainā, Maui.
Naunaunawele ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3688 Apa. 2 to Meeau, LCA 3766 Apa. 2—4 to Akaku, 3847 Apa. 3 to Puhi, LCA 3853 Apa. 2 to Poohina, LCA 3925H Apa. 2 to Kaaha, LCA 3926 Apa. 2 to Nika, LCA 3927 Apa. 1 to Nakoholua, LCA 3930 Apa. 3 to Nauwele, LCA 3932 Apa. 3—6 to Nalepo, LCA 4239 Apa. 5 to Kaukau, LCA 4242 Apa. 1—2 to Kaaea, LCA 4253 to Kaiama, LCA 4260 Apa. 4 to Kaluaiuka, LCA 4552 Apa. 3 to Aumai, and LCA 5904 to Polea. Documented as "Naunaunahawele" in LCA 4239 to Kaukau.

ʻŌhi'a ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 6460 Apana 2 to Kaihe, LCA 6601 Apa. 5 to Piimoku, LCA 6722 Apa. 2 to Pa, LCA 6722B Apana 2 to Mai.
Palaha ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 4241 to Kaluakini
Papa'ōlena ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3192 Apa. 2 to Kahinu, LCA 4742 Apa. 1 and 2 to Makuahine, LCA 6476 to Keliikuli
Pohakea ( <i>'ili</i> )	An 'ili associated with LCA 3688 Apa. 4 to Meeau
Pohakiki ( <i>ʻili</i> )	<i>Lit.</i> Ka-'āina-iki: the small land An <i>'ili</i> associated with LCA327B Apa. 3 to John Previer
Poehu ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3988 Apa. 1—3 to Hilahila, LCA 5002 Apa. 3 and 8 to Kahanaumaikai, LCA 3765 Apa. 5 to Aio. Misspelled "Poohumoi" and "Poelu".
Po'opōhaku ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3925C Apa. 4 to Kahope and LCA 5002 Apa. 7 to Kahanaumaikai. Also spelled "Popohaku".
Pu'u Lena ( <i>ʻili</i> )	<i>Lit.,</i> yellow hill. An <i>'ili</i> associated with LCA 3766 Apa. 1 to Akaku, LCA 3852 Apa. 3—4 to Pokole, LCA 3853 Apa. 1 to Poohina, LCA 3925 R to Kahena, LCA 3925S Apa. 2 to Olomana, LCA 3926 Apa. 1 to Nika, LCA 3929 to Umi, LCA 3932 Apa. 1—2 to Nalepo, LCA 4239 Apa. 6 to Kaukau, LCA 4254 Apa. 4 to kaumauma, LCA 4257 Apa. 2 to Kauluhua, and LCA 6539 Apa. 4 to Hoonoho (spelt "Poolena").
Waihale ( <i>'ili</i> )	An 'ili associated with LCA 327B to John Previer, possibly older name for the <i>ahupua'a</i> Honokōwai
Wainalu ( <i>ʻili</i> )	An <i>'ili</i> associated with LCA 3987 to Holona, 4793B Apa. $1-2$ to Hanuna, 6601 Apa. 4 to Piimoku
Wanaloa ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 3925C Apa. 2—3 to Kahope (misspelt "Analoa") and 6432 to Kaninau.
Pu'ukukui	<i>Lit.,</i> candlenut hill. Peak (5,788 feet high), the highest point on West Maui, Lāhainā qd. (Macdonald et al. 1983:324)
Uilikiko ('ili)	An <i>'ili</i> associated with LCA 3754:4 to Aio, LCA 3988:4 to Hilahila, LCA 3689:1 to Maui, LCA 3852:2 to Pokole, and LCA 4249 to Makeeui.
Waihale ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 327B to John Preever. Possible that Waiale may be an older name for the ahupua'a.
Wainalo ( <i>'ili</i> )	An <i>'ili</i> associated with LCA 6601 to Piimoku
Wainalu ( <i>ʻili</i> )	An 'ili associated with LCA 327 to John Prever and LCA 3987 to Holona

#### Wanaloa (*'ili*)

An *'ili* associated with LCA 6432 to Kaninau. Also recorded as "Analoa" in LCA 3925C to Kahope

Handy et al. (1991) summarize the relationship between Hawaiians and the natural environment best in the following passage:

The sky, sea, and earth, and all in and on them are alive with meaning indelibly impressed upon every fiber of the unconscious as well as the conscious psyche. Hawaiian poetry and folklore reveal this intimate rapport with the elements, (Handy et al. 1991:23-24)

(T)he relationship which existed from very early times between the Hawaiian people ... is abundantly exemplified in traditional mele (songs), in pule (prayer chants), and in genealogical records which associate the ancestors, primordial and more recent, with their individual homelands, celebrating always the outstanding qualities and features of those lands. (Handy et al. 1991:42)

This relationship of Hawaiians to the natural environment is especially prevalent in the *mo'olelo* (traditional knowledge) of the wider *moku* of Honua'ula, a large part of which revolves around the lyrical descriptions of the elemental characteristics of the ' $\bar{a}ina$  (land) where the names of the *ahupua'a* are noted in name chants and the winds and rains of the region are recounted in legends and poems.

The *moʻolelo* of Honokōwai revolves around the elemental characteristics of the *'āina*. Hawaiians believe that every *ahupua'a* has a specific wind and rain that are recounted in chants, legends, and poems. In the story of Lonoikamakahiki, son of Keawenuiaumi, as retold by Fornander, an *oli* (chant) is recited by Kaikilani in honor of Lonoikamakahiki (Fornander 1917). This *oli* recounts the various *ahupua'a* of Maui, including Honokōwai:

	•••
O ka eke ia ku i ka ieie	That is the bag that will bring fame,
O ka eke ia, Kaeke-a	That is the bag, the bag of –
Elu-a–	Two–
Elua ia Honokeana Keana,	There are two of Honokeana Keana;
Elua ana Opihi,	There are two caves of Opihi
Ekolu Kahana,	There are three Kahana;
Elua Mailepai,	Two Mailepai,
Elua Honokawai,	Two Honokawai;
O Kawailua,	Kawailua;
I kolu ia Kekaa.	Kekaa making the third.
Eha la Māhinahina,	There are four Māhinahina
O ka luna i Alaeloa.	On the top of Alaeloa.

Eha la aina hono,	There are four lands containing Hono:
O Honokahua,	Honokahua,
O Honolua:	Honolua,
Honokōhau, <b>Honokawai</b>	Honokōhau, <b>Honokawai</b>
O Honopou,	Honopou,
Aha la aina hono	That makes four lands containing Hono.
	(Fornander 1917:302-303)

The various rains of Hawai'i were also given names. Some were named after people, others after their particular traits or the way they interacted with the area and local vegetation. Different rains from different parts of the islands often share the same name. The book *Hānau Ka Ua Hawaiian Rain Names* (C. L. Akana and Gonzalez 2015) contains many of the rain names that were recorded in newspapers from the 1800s and other primary source materials. As C. L. Akana and Gonzalez (2015:xv) point out:

They knew that one place could have several different rains, and that each rain was distinguishable from another. They knew when a particular rain would fall, its color, duration, intensity, the path it would take, the sound it made on the trees, the scent it carried, and the effect it had on people.

Some rain terms have recognizable Polynesian counterparts and are probably ancient, connecting us to our 'ohana across the oceans and across time... Some rains are named after people.... Rain names may be used for their literal or figurative meaning... Many rain names refer to native vegetation.... Some describe the rain's interaction with these plants.... Some rains may act different at certain times or may indicate a certain season.... Rains represent many things to our people. First and foremost, rains are integral to our survival.

Through extensive research of Hawaiian language sources C. L. Akana and Gonzalez (2015) have identified and compiled the following names for the rains of Honokōwai:

The Līlīlehua Rain (C. L. Akana and Gonzalez 2015:156)

From a mele ho'oilina (legacy song) for 'Emalani Kaleleonālani:

Hopu Kahana i ka ua Līlīlehua	Kahana seized the Līlīlehua rain
Palahe'a nō i ke pili o Honokōwai	Stained by the pili grass of
'Uku li'i ka pua onaona, nonoho i ka mau'u	Honokōwai The fragrant
Nonohe nō, me he	blossoms are tiny,
lililehua ala Ka 'anoa e ka Nahua o	dwelling upon the grass
nā pali	Attractive like the līlīlehua flower
	Caught by the Nahua of the cliffs
The Līlīlehua Rain of Honokawai (C. L. Akana	and Gonzalez 2015:224)

From a mele ho'oilina (honorific chant) for 'Emalani Kaleleonālani:

Ke oho ua Pa'ūpili o	Tresses that sweep
Lele	like the Pa'ūpili
Līlīlehua i uka o Honokawai	rain of Lele

Like the Līlīlehua wind and rain above Honokawai

The Nahua Rain of Honokowai (C. L. Akana and Gonzalez 2015:180-181)

From a mele (song) for Lāhainā and Kā'anapali that notes the plains of Honokōwai

Me he lole 'ula i pili ala ka Nahua

Ka pili 'a'ai i ke kula o Honokōwai

Like a red cloth clinging there is the Nahua Clinging-bright and briliant- to the plains of Honokowai

Hawaiian proverbs, or 'olelo no'eau, have been passed down through oral traditions. Many 'olelo no'eau have been collected and published in Hawaiian language newspapers and other primary and secondary sources. They often have both a literal and metaphorical meaning (called kaona), which is given where applicable. Or leave about geography can help us to understand natural phenomenon, land use, and the history of a place. While there are several 'olelo no'eau that refer to Kā'anapali Moku, there is only one that is specifically related to Honokōwai.

There are four '*olelo no'eau* (Pukui 1983) that describe the landscape and people of Ka'anapali:

Kā'anapali wāwae 'ula'ula.

Red-footed Kā'anapali.

A term of derision for the people of Kā'anapali. The soil there is red, and so the people are said to be recognizable by the red soles of their feet. ('Olelo No'eau 1280)

Ka pali hinahina o Kāʻanapali. The gray hills of Kāʻanapali. (*'Ōlelo Noʻeau* 1526)

Ka ua leina hua o Kā'anapali. The rain of Kā'anapali that leaps and produces fruit. ('Ōlelo No'eau 1582)

Ka ua Lililehua o Kāʻanapali. The Tiny-drops-on-the-lehua rain of Kāʻanapali. (*'Ōlelo Noʻeau* 1583)

One 'olelo no'eau (Pukui 1983) provides insight into the origin of the name Honokowai.

*Na hono a Pi'ilani.* The bays of Pi'ilani.

The realm of Pi'ilani, a powerful ruling chief of Maui, included the islands of Moloka'i and Lāna'i, as well as all the bays of Maui whose names begin with *hono*. ('*Ōlelo No'eau* 2218)

### 3.1.2 The Mythical Era

Preserved in *mo'olelo* (traditional stories) are tales about a period in Hawai'i before *kānaka* (humans), when gods and deities inhabited the islands, often bringing about the creation of lands and resources. There are no *mo'olelo* that speak specifically about Honokōwai. Below are excerpts of *mo'olelo* set more generally in the larger *moku* of Kā'anapali.

### 3.1.2.1 Nā Moʻolelo o nā Aliʻi ma Honokōwai – The Stories of Chiefs at Honokōwai

### 3.1.2.1.1 Alapa'inui and Pele'ioholani

In 1738, a battle ensued in Honokōwai between Alapa'inui and Pele'ioholani over control of Maui. On a visit to Lāhainā, Alapa'inui– Chief of Hawai'i Island and great-uncle of Kamehameha I– learned that Kauhiaimokuakama, also known as Kauhipumaikahoaka, was challenging the authority of the newly appointed  $m\bar{o}'\bar{i}$  (chief) of Maui, Kamehamehanui. After hearing this information, Alapa'inui and his cousin, Kamehamehanui, returned to Hawai'i to prepare men and materials for war with Kauhiaimokuakama. In Ancient History of the Hawaiian People, Fornander recounts the battle that followed:

In the following year, say 1738, Alapainui returned to Maui with a large fleet, well equipped, accompanied by Kamehamehanui. With headquarters at Lahaina, his forces extended from Ukumehame to Honokawai. Meanwhile Kauhi had not been idle during the absence of Alapai. Besides his own forces and the chiefs that adhered to him, he had sent presents and messages to Peleioholani, now king of Oahu, to come to his assistance, which that restless and warlike prince accepted, and landing his fleet at Kekaha, encamped his soldiers about Honolua and Honokahua.

It is said that Alapai proceeded with great severity against the adherents of Kauhi in Lahaina, destroying their taro patches and breaking down the watercourses out of the Kauaula, Kanaha, and Mahoma valleys.

Though details of this war are not given in the legend, yet the following facts may be gathered from scattered passages, viz., that Alapai arrived at Lahaina with his fleet before Peleioholani had landed at Kekaha; that Kauhi, being unable to cope alone with the large force under Alapanui, retreated to the uplands and ravines back of Lahaina, where he was kept in check by a corps of observation; that Peleioholani, after landing and finding Kauhi in this position, resolved to march to his relief, and by engaging Alapai's forces in a general battle, enable Kauhi to descend and form a junction with his Oahu allies.

To this effect Peleioholani advanced to Honokawai, where he found a detachment of Alapai's army, which he overthrew and drove back with great loss to Keawawa. Here they rallied upon the main body of the Hawaii troops. The next morning Alapai had moved up his whole force, and a grand battle was fought between the Oahu and Hawaii armies. The fortune of the battle swayed back and forth from Honokōwai to near into Lahaina; and to this day heaps of human bones and skulls, half buried in vairous places in the sand, attest the bitterness of the strife and the carnage committed. That result was probably a drawn battle, for it is related that, after great losses on both sides, the two kings – Alapainui and Peleiholani – met on the battlefield, and, instead of coming to blows, they saluted each other, and, considering their mutual losses on behalf of others, they made a peace between themselves and renewed the treaty of Naonealaa on Oahu. (Fornander and Grant 1996:141)

### 3.1.2.1.2 Pu'u Keka'a, "The Leaping Place of Souls" and Chief Kahekilinui'ahu-manu

Keka'a, four-miles south of the project area, was the capital of Maui at the time of Ka'alaneo ruling West Maui (Kaha and Fornander 1872:540). The bustling village included cultivation of potatoes, bananas, sugarcane, and was home to Pu'u Keka'a. Pu'u Keka'a, otherwise known as "the leaping place of the souls," or "Hill of the Rumbling" (Tarallo-Jensen 1987:26), is commonly referred to as Black Rock at Kā'anapali Beach (E. Kennedy 1997:F). It has long been believed that atop this *pu'u*, spiritual forces converge and form a *leina a ke akua*, a place from which the spirits leapt into the sea of eternity. If judged to be worthy, a soul's *aumakua* (animal spirit) would be waiting in a "ghostly canoe" to take them to *Po*, the unknown netherworld. But if judged poorly, the spirit would go to *ao kuewa* where they would wander between dead and living for eternity (E. Kennedy 1997:F). Others also believe that Pu'u Keka'a is the site of the *Ho'akua*, the Transmutation Ritual performed after the death of a chief (Tarallo-Jensen 1987:26).

The hill was bounded by Keka'a village to one side, and the *Lo'i Hiehie* (royal taro patch) to the other. Below the summit of the black rock is a cave named for the God *Moemoe*, the patron of restful sleep, who was thought to have lived at Keka'a with Maui for some time (Kaha and Fornander 1872:544). It was on this hill that the High Chief Kahekilinui'ahu-manu proved his bravery to the ancestors by diving off the rock into the ocean and surviving (Tarallo-Jensen 1987:26). In modern day, tourists and locals alike jump off this *pu'u* into the ocean, and only rarely are there any complications. But in ancient times, the hill was known to be far more haunted and spooky than the modern day tourist destination it has become. Kaha and Fornander (1872) wrote on the strange incidents recorded at Pu'u Keka'a and the numrous bones known to be there:

Concerning the frequent death of all those who went alone. This was a strange, phenomenon connected with this hill. From the time I commenced living down at Lahaina, A. D. 1859-1872, it seemed there were nine persons who died there without any apparent cause. Keokiko was one of the corpses buried there, and is there at this time; that is the white thing on top of that hill.

Concerning the great amount of human bones at this place. On account of the great number of people at this place there are numerous skeletons, as if thousands of people died there; it is there that the Lahainaluna students go to get skeletons for them when they are studying anatomy. The bones are plentiful there; they completely cover the sand.

This is also a ghostly place. Some time a number of people came from Kaanapali (from the other side) going to Lahaina during - dark. When they came to Kekaa stones rolled clown from the top of the hill without any cause. Listening to it, it seemed as if the hill was tumbling down; the people going along were startled and they explained, "Kekaa is ghostly! Kekaa is ghostly!" Certainly this is a strange thing for this hill to do. (Kaha and Fornander 1872:540-544)

Later, Keka'a was the site of a thriving plantation camp, and Pu'u Keka'a was the burial site for hundreds of the plantation workers (A. Akana 1997).

**3.1.3** Ka Po'e Kahiko o ke Ahupua'a o Honokōwai – Traditional Hawaiian Settlement of the Honkōwai Ahupua

In response to inquiries by E.S.C. Handy about the agriculture of Kā'anapali Moku, D.T. Fleming writes:

In all three valleys which you mention – Honokōwai, Honokohua, and Honolua, as well as Kahana, there were considerable taro raised in the olden times; as a matter of fact, a great deal was raised in Honokōwai, where there must have been 30 or 40 acres under cultivation at one time. (D. T. Fleming in Sterling 1998:46)

Claims for traditional resources and agricultural areas at the time of the Māhele confirm this account and offer insight into additional traditional agricultural and resource gathering practices (see section 3.2.1.2). While *kalo* (taro) was most certainly a staple crop in agricultural system throughout Hawai'i and particularly in Honokōwai, *kuleana* claims and awards (LCAs) also show that *'uala* (potatos) were important crops of the area. LCA testimonies indicate that these lands were also used to cultivate *mai'a* (banana), *lauhala* (pandanus leaves), *wauke* (mulberry) *olonā* (a native shrub *Touchardia latifolia*, the bark from which was valued as fiber for cordage and nets), and *kula* (pasture land).

### **3.1.3.1** Ka 'Oihana Lawai'a o ka Ahupua'a o Honokōwai – Aquaculture and the Fishing Traditions of Honokōwai

One of the fishing grounds of Kā'anapali is described as being very shallow from twenty to thirty fathoms in depth and extending from Hāwea Point at Kā'anapali to the eastern point of Lāna'i (Kahā'ulelio 2006:59). Like the *mo'olelo* (traditional stories) of Pōhaku Kā'anapali, John Kapaku also shared the following fishing story with Barbara Lyons about fishing partners who lived near each other and would fish together at night:

Long ago, two men who lived near each other at Kahana beach near Kaanapali were in the habit of fishing together at night. During the day both worked at other vocations, but in the evenings they would swim out through the cool, dark water, holding between them a long net.

When the net was placed, they swam toward shore, then returned, beating the water with their hand to chase the fish into their nets. Then they would dive down and hauld the net up and swim with it to the beach.

They took it to a nearby cave to empty it, and there in the deep gloom the owner of the net divided the fish by sense of touch. Meanwhile his friend took the net to strech it out on the beach to dry. Then each would take hom his pile of fish.

One morning while the wife of the man who did the dividing was stringing up her fish on a line, her neighbor's wife chanced to see her and was struck by the size of the fish. They were twice as big as any her husband brought home! She brooded over this until she saw him again.

"What does it mean?" she demanded. "Why do our neighbors have such large fish, when you bring only small ones home?"

The husband grew very thoughtful.

That night as he and his friend swam out to the net he pulled ahead and was the first to dive down. The net was loaded with fish. Quickly rising to the surface, he shouted, "Go and tell my wife that I am at the point of the fish!"

His friend, taking this to mean that a shark was attacking him, swam to shore in terror. He hurried to his friend's house to take the bad news to his wife.

"Your husband is being eaten by a shark!" he cried.

The poor wife was distraught and ran along the beach, weeping and calling her husband's name, stumbling in her haste.

The other man walked home with the sound of her wailing in his ears. He wondered if he might, after all, have been able to help his fellow fisherman. But it was too late now. Across the vast expanse of water the island of Lanai rose darkly. The ocean between lay calm and undisturbed, seen dimply by the light of the stars.

As the distraught wife passed the entrance to the cave, a ghostly sound issued from within. Trembling, she stood still and listened.

"Here I am," a voice called sepulchrally as it echoed against the walls of the caver. "I'm here, in this cave."

Her husband's ghost! She stood poised for flight, yet wanting to remain. As she hesitated, her husband came from the cave and took her arm. It was he, alive!

He explained to her what he had done, deliberately misleading the other so that he could see the night's catch for himself. He took his wife into the cave and together they divided the fish, and this time carried home all of the biggest ones.

Never again did the man who owned the net have his neighbor's help in fishing. Through his own selfishness, he had lost not only a helper but a friend. (B. Lyons 1957)

The fishing practice described in the above *mo'olelo* (traditional stories) may be a type of fishing called *lauahi*, where on a good dark night with no waves the *lauahi* would be cast and the net subsequently drawn in from the breakers in sheltered bays (Kahā'ulelio 2006:11). Kahā'ulelio goes on to say that in a half a night of *lauahi* fishing, three to four gunny sacks could be filled with *kūmū* (*Parupeneus porphyreus*), *pā'ū'ū* (*Caranx ignobilis*), *nānue* (*Kyphosus sanwicensis*), *weke* (*Mulloides flavolineatus*), and other kinds of fish.

In 1839, clarity of the fishing grounds and fish of the *maka'āinana* (common people) and that of the *konohiki* (land lord) and *ali'l* (chief) were written down as a part of the Kingdom laws, a pattern which may be an extension of a traditional management system. The King declared that the fishing grounds without the coral reef and the *lūhe'e* (octopus fishing) grounds were for the people (Maly and Maly 2003:244). But the fishing grounds from the coral reefs to the sea beach are for the landlords, and for the tenants of their several lands, but not for others. If a species of fish which the landlord claims as his own should go onto the grounds of the common people, then that specific fish is *kapu* (tabu).

#### 3.2 ARRIVAL OF WESTERN VESSELS AND 19<sup>TH</sup> CENTURY CULTURE CHANGE

In 1778, Captain James Cook made Hawai'i known to the West, and the flow of seamen, merchants, missionaries, and plantation owners that followed forever altered the land, people, and culture of Hawai'i. The sections below explain how these changes impacted the people and lands of of Honua'ula.

The nineteenth century brought a multitude of commercial, demographic, social, and religious changes to nearby Lāhainā, and the surrounding lands which include the study area, encouraged by the burgeoning foreign influx on Maui. In 1819 the first whaling ships arrived in Hawaiian waters, and Lāhainā Harbor became a primary port of call for provisioning ships in the islands. Closely following the arrival of the first whaling ships, the first Protestant missionaries and their families arrived in Lāhainā in 1823. With an increasing population of foreigners entering nearby Lāhainā, there was a need to increase the traditional agricultural surplus that fell primarily under the control of the *ali'i* (chief) class, for economic trade. Henry Whitney, editor for The Pacific Commercial Advertiser, implies that western vegetables became a common and abundant constituent of the Hawaiian gardens in the following excerpt about Maui Island:

...Fruits are generally abundant. The grape seems to luxuriate in the rich soil, and the sunny, clear weather of Lāhainā is, par excellence, the fruit of this place or Islands. Figs, bananas and melons are produced in abundance, and pumpkins enough for all New England to make pies for a general Thanksgiving (Whitney 1858).

After the consolidation of the rulership of the Hawaiian Islands by Kamehameha I early in the nineteenth century, nearby Lāhainā became the "capital" of the kingdom until the 1840's when the government moved to Honolulu. The sugar cane Ellis observed in the environs of Lāhainā in the 1820's, along with the introduction and mass cultivation of pineapple, would become the bases for commercial ventures that would reshape the landscape along the broad ridges of the present study area and the alluvial plains below.

#### 3.2.1 The Great Māhele

By the mid 1800s, the Hawaiian Islands were bustling with foreign capitalistic entrepreneurs, traders and whalers, expedient farmers, missionaries and others, all hoping to reap the benefits of the Hawaiian 'āina (land). Prior to the 1800s, Hawaiian land tenure was under the control of the King and appointed *ali'i nui* (high chiefs), *ali'i*, and *konohiki* (chief of the *ahupua'a*) charged with the *kuleana* (responsibility) to protect the land (Beckwith 1970:383). However, upon the global stage dictated by Western values of individualism and private ownership, Hawaiian land proprietorship began to shift.

The Great *Māhele* of 1848 gained traction due to the actions of King Kamehameha III in the years prior (Commissioner of Public Lands 1929:VII). In 1840, with the passing of the Constitution of the Kingdom of Hawai'i and the Organic Acts of 1845 and 1846, the Hawaiian Government marked an end to the feudal system and became a constitutional monarchy (Spaulding 1931:3; Van Dyke 2008:32-33).

The actual *Māhele*, or land division, began in 1848. The intent was for King Kamehameha III to retain his own individual lands, the Crown Lands, and for the remaining lands to be divided into thirds: land entitled to the government or Government Lands, land entitled the *ali'i* and *konohiki* or Konohiki Lands, and the *maka'āina* or Kuleana Lands (Chinen 1958:15-16). In order to secure the title to any lands, residents would submit their claims to The Board of Comissioners to Quiet Land Titles, or Land Commission Board. The Board would then determine the validity of those claims and issue a Land Commission Award (hereafter referred to as LCA) to successful claimants that would then be conferred following the payment of a commutation fee (Chinen 1958:8-9, 21). These fees were waived to all native tenants as long as the claimant could prove successful land cultivation pre-1845 through testimony (Alexander 1890:115).

The Crown, Government, Konohiki, and Kuleana Lands all functioned slightly differently. Crown Lands were defined as the,

... private lands of His Majesty Kamehameha III., to have and to hold for himself, his heirs and successors forever; and said lands shall be regulated and disposed of according to his royal will and pleasure subject only to the rights of tenants. (Kingdom of Hawaii 1848)

At the death of Kamehameha III, the Crown Lands passed to Kamehameha IV. But at the death of Kamehameha IV there was no immediate heir to the throne which created confusion as to the inheritance of Crown Lands and whether it followed the family line or the throne. It was decided by the Supreme Court under the confirmatory Act of June 7th, 1848 that "the inheritance is limited to the *successors* to the *throne*," and "the wearers of the crown which the conqueror had won," and that at the same time "each successive possessor may regulate and dispose of the same according to his will and pleasure as private property, in the manner as was done by Kamehameha III" (Alexander 1890:121).

Government Lands, on the other hand, were defined and set aside in a manner more typical of public lands. They were defined as:

... those lands to be set apart as the lands of the Hawaiian Government, subject always to the rights of tenants. And we do hereby appoint the Minister of the Interior and his successors in office, to direct, superintend, and dispose of said lands, as provided in the Act ... (p)rovided, however, that the Minister ... shall have the power, upon the approval of the King in Privy Council, to dispose of the government lands to Hawaiian subject, upon such other terms and conditions as to him and the King in Privy Council, may seem best for the promotion of agriculture, and the best interests for the Hawaiian Kingdom. (Kingdom of Hawaii 1848)

In designations of lands as either Crown or Government, and all awards of whole *ahupua'a*, *'ili*, and later land sales to foreigners, the rights of the native tenants were expressly reserved, *"Koe na Kuleana o Kanaka"* (Reserving the Rights of Native Tenants);(Alexander 1890:114). The Kuleana Act of 1850 waived the commutation fee, although a survey of the land was still required, and enabled land ownership titling for native tenants (Alexander 1890:115). Tenants could make claims for any lands that they cultivated through testimony to the Land Commission, often including multiple *'ili*, or *apana* (parcels), located both *mauka* and *makai*. These claims were granted to native Hawaiians, non-Hawaiians born on the island, naturalized foreigners, and long-time residents foreigners who could prove their occupancy on the land prior to 1845 (Lee-Greig et al. 2014:44). However, in a Congressional hearing from 1920 leading to the formation of the DHHL, Prince Jonah Kūhiō stated that,

But so far as the common people were concerned, they did not divide up the lands and say to the common people, 'These are your lands' as they did with the King and chiefs. No; they said to the common people, 'Not, if you have any right in the lands of the Kingdom, come and make your claim before the board of royal commissioners, and you are allowed two years to do it in, and if you do not make your claim in two years' time you will be barred forever from making any futher claim to the lands of the Kingdom.' The common people never knew the real value of the lands. All they knew of the value of the lands was in the cultivation of same for their food. ("H. R. 13500" 1920:68)

The intent of the Māhele was for the land to be divided equally among the government, the chiefs, and native tenants, the outcome was far from equitable. Native tentants recieved less than one percent of all the land in Hawai'i, a total of 28,658 acres, while 32 missionary families received 41,000 acres (Van Dyke 2008:48). Additionally, these 28,000 acres were spread across so many individuals that according to Prince Kūhiō, it was common for grants to be for parcels as small as one-eight of an acre, or one-quarter, and so on ("H. R. 13500" 1920:69).

#### 3.2.1.1 Crown Lands of Honokōwai

According to the *Buke Mahele*, at the onset of the Māhele in 1848, Honokōwai was retained as Crown Lands by Kamehameha III (*Buke Mahele 1848:VIII*). This is further supported by the Dodge (1885) map highlighting the *ahupua'a* in gold as crown lands. In order to ease the process of land titling, both native Hawaiians and other residents could purchase land outright from either Crown Lands or Government Lands through *Palapala Sila Nui* (Royal Patent Grants);(Maly and Maly 2005:152), in addition to *kuleana* claims through LCAs. In Honokōwai, all but one of the LCAs awarded also received a Royal Patent Grant.

#### 3.2.1.2 Kuleana Land Claims and Royal Patent Grants in Honokōwai

Between 1849 and 1897, there were 70 petitions for land claims in Honokōwai, and 59 were successfully awarded Land Commission Awards (LCA). Of these 59 claimants, 56 were native Hawaiians and 3 foreigners (LCA 76 to Shaw, 5005 and 5005B to White, and 327B to Previer). In total, native Hawaiians received a combined 166.34 acres in LCA claims, with the exception of a *kapu ali'i*, while the three foreigners received 961.71 acres combined.

The majority of the LCA *maka'ainana*, or commoner claims, were for small portions of agricultural land across the fertile waters of the Honokōwai Gulch. The larger LCAs went to *ali'i* and notable *haole*. Below are two of the largest awards granted in the project area: LCA 76 to William Shaw, and LCCA 11216:28 to Mikahela Kekau'onohi:

LCA 76 was a 675-acre parcel awarded to William Shaw. It included the Honokowai Valley and River and the minor gulch system south of Honokowai Stream. Shaw, a *haole* from Dublin, Ireland, arrived in Lahaina in 1807 when he was 14 years old. Shaw married a Hawaiian woman and their daughters inherited *ali'i* rank, becoming *hanai* (informal) daughters to Kauaiwa Kamehameha, who gave them lands in Lahaina. Shaw was given lands in Honokowai (at Haenanui and Loi'unui) and Waikapu by Kamehameha I (Donham 1994:4-5).

Award number 11216:28 went to Mikahela Kekau'onohi (Donham 1994:4-5). This LCA included the entirety of Mo'omuku Ahupua'a (334.05 acres) on the north side of Honokwai Stream, with the exception of a few small LCAs. Kekau'onohi was a *kapu ali'i*, daughter of Kaho'anoku Kina'u, a son of Kamehameha I and Peleuli (Kamakau 1992:208). Kekau'onohi became the wife of Liholiho (Kamakau 1992:250) and was nearly appointed Governor of Maui, until William Richards challenged her nomination, convincing the chiefs that John Young should be governor of Maui because he knew more English and be a better delegate with foreign lands. The chiefs gave into Richards and appointed Young Governor to Maui, and Kekau'onohi Governor of Kauai (Kamakau 1992:397).

All other LCA awards claimed in Honokōwai were typically *maka'ainana* lands for irrigated taro cultivation occurring at elevations at least as high as 1200-1250 feet above the valley bottom (Donham 1994:4-5). The native claims included roughly 100 acres of *kula* land, 25 acres of *kalo* land, 55 acres of both *kula* and *kalo* land, 55 acres of *kula 'uala* land, 40 acres of house lots, 2 acres of *aina la'au*, and 0.2 acres of banana land. Agricultural claims on these lots included about 700 *lo'i*, 8 dry *lo'i*, 30 *waihae*, 23 *mo'o waihae*, 30 *loaloa*, 2 *mo'o loaloa*, 3 *pali uala*, 7 *mo'o uala*, and 2 *wauke*. Some of the more unique claims included banana land (LCA 3925E.2 to Kanealii in Moomuku); many lo'i, potato, *wauke*, *wiliwili*, 2 *kukui* trees, 1 *lauhala* clump (5002 to Kahanaumaikai in Kaneauau); and sweet potato kula, a *kahawai* with bananas, *olonā*, sugar cane (6539 to Hoonoho in Kapili and Puulena).

The small amount of acreage granted to native Hawaiians relative to foreigners was typical of the *Māhele* process. Often these claims were either insufficient to support a family's subsistence lifestyle or were unawarded altogether.

In the project area, a total of 11 claims went unawarded. However, six of these claims were granted under another LCA number (LCA 186 to White  $\rightarrow$  LCA 5005, 3768 to Aio  $\rightarrow$  3765, 3925F to Kalikuli  $\rightarrow$  6476, 3928 to Nalepo $\rightarrow$ 3932, 3989 to Hoonoho $\rightarrow$ 3932, and 6614 to Nakoholua $\rightarrow$ 3927). The remaining 5 claims (LCA 1913 to Umalele, 6186 to Pipipi, 5146 to Kaolii, and 6722B to Mahoe, 3767 to Alawa) were outright unawarded because they were either deceased by the time the grant was submitted (3767 to Alawa), or for a variety of other reasons including inability to prove cultivation prior to the *Māhele*, personal issues with the *Konohiki*, etc.

The following table summarizes all 70 claims; their acreage, resources, and location within Honokōwai. A note about Hawaiian terms in the chart: *Waihae*— The term "waihae" is translated as an agricultural term used commonly in 1840s especially on Maui, exact translation unknown. *Loaloa*— elongated garden plot, nothing else known (Ulukau Hawaiian Electronic Library).

Indices of Awards: in the "Lands of Aliis and Chiefs", granted to "Kekauonohi, M. (W): Great granddaughter of Kekaulike—King of Maui, wife of A. Kealiiahonui, who died June 23, 1849, also wife of L Haalelea, who died June 2, 1851"

#### 3.2.2 Economic Changes in West Maui

In the early-to-mid-1800s, white potatoes were one of Maui's most important agricultural commodities, and Kula was regarded as having some of the finest potato-growing land. Demand for white potatoes, also known as Irish potatoes or *'uala haole*, came primarily from two sources: the local whaling industry and the California Gold Rush.

Hawai'i's whaling period began in 1819 and peaked in 1846. Whaling ships used the islands as a stopover between the United States and Japan, where whales were hunted primarily for their blubber, which was processed into whale oil and used for heating, lighting, and as an industrial lubricant. Each spring and summer, hundreds of whaling ships would arrive and spend months at a time in Lāhainā and Honolulu, their crews resting and stocking up on food and other supplies.

Whaling ship crews hailed mostly from New England, and their desire to eat foods that were of familiar influenced from what farmers planted on Maui and O'ahu. Most notably, the American whalers' appetite for white potatoes led to its extensive cultivation in Kula, where it grew especially well. In fact, the availability of white potatoes on Maui is one reason why whaling ships preferred Lāhainā over Honolulu. An 1854 report from the Committee on Irish Potatoes prepared for the Royal Hawaiian Agricultural Society gave the following account of Maui's potato trade when it was still near its peak:

From 1840 the natives have been paying more attention to the cultivation of the Irish potato, and have found a ready market in the spring and fall visits of the whaling fleet, who were but too glad to avail themselves (from '40 to '48) to trade cotton cloth at 25cts per yard; that cost from 8 to 10cts, in exchange for potatoes at \$3, and often at \$1.50 per barrel.

It seems almost incredible at the present time, and at so few years removed, that the natives would plant, (cultivate they did not-nature was generous) and when ripe, dig the potatoes, back a barrel at a time to the beach, a distance of 10 to 12 miles, and sell them at Fifty Cents, yet hundreds of barrels were thus brought in, for years up to 1847, when some few carts and pack bullocks were brought into use. (Gilman 1854:138-139)

#### 3.2.3 Sugar Arrives

The unifying of the Hawaiian Islands in 1790 and the arrival of missionaries in the 1820s changed the socioeconomics and agricultural practices of the region. The traditional Hawaiian *ahupua'a* system struggled against foreign entreprenuers pushing for private land ownership and a market-based economy. The Great *Māhele* of 1848 solidified the latter, allowing capitalism to take root and foreign businesses to dominate the landscape. The Civil War prevented the south from milling sugar which allowed room for Hawai'i to compete in the lucrative California sugar market (MacLennan 1997:99), leading many entreprenurs to begin various milling operations in the islands. For nearly a century following 1840, sugar milling in West Maui grew from a small cane

field cultivated by David Malo (Rolph 1917:168-169), to a massive 10,000 acre operation operated by the Pioneer Mill Company (Honolulu Star-Bulletin 1947).

*Kō*, or sugar cane (*Saccharum officinarum*), made its first appearance in Hawai'i during the initial settlement by Polynesians. The highly adaptable cane evolved multiple variations as it traveled and thrived throughout the Pacific Islands for generations (Handy et al. 1991:183). In Hawaiian wet-taro farming,  $k\bar{o}$  was found along embankments separating flooded terraces, while in dry-taro and sweet-potato farming the  $k\bar{o}$  was planted as hedges or a windbreak (Handy et al. 1991:186). Sugar cane was a "lifesaver" at times of famine, a treat in times of abundance, an easement for unpalatable medicine, and possibly a hygienic tool to clean teeth (Abbott 1992:41; Handy et al. 1991:186).  $K\bar{o}$  was also planted for its colorful aesthetic (Abbott 1992:40). Leaves of the plant were sometimes used as wall coverings, the stalk as a dart in games, and the skin for plaiting braids (Handy et al. 1991:187).

#### 3.2.3.1 West Maui Sugar Company

The beginning of the industrial sugar boom occured when Captain Pardon Edwards brought a "bundle of choice" sugarcane from the Marquesas Islands to Kauai in 1854, making a pit stop in Lāhāina and dropping some off with Consul Chase and F.A. Oudinot. The new cane outperformed the previous Cuban variety in growth rate, healthier rooting, sweetness, and hardiness against pests. It quickly became known as the "Lāhainā Cane," and catalyzed the sugar mill industry (Royal Gardens Kew 1894:418-419). The preferable Lāhainā Cane quickly catalyzed the sugar mill industry (Davies 1884), leading a number of small sugar companies to begin cane cultivation (Donham 1994:4-5).

In 1864, King Kamehameha V, F.W. Hutchison of the Lāhainā Sugar Company (The Pacific Commercial Advertiser 1861:2), and James Makee of the Rose Ranch in 'Ulupalakua, joined efforts to begin the West Maui Sugar Company in Lāhainā. Z.S. Spalding joined as manager and helped acquire the Lāhainā Sugar Campany in the late 1860s (Lee-Greig et al. 2008:30). After sugar prices plummeted in 1870, James Makee's son, Parker Makee, took over as manager (ibid). Shortly after, the mill began to slow as the Makees became preoccupied with running the Makee Sugar Co. in Kauai with future King Kalākaua (Thrum 1925:86). King Kamehameha V died in 1872, and by 1874, the remaining associates decided to sell the West Maui Sugar Company to the Pioneer Mill Company (The Pacific Commercial Advertiser 1874:3). By the turn of the century, Pioneer Mill would purchase 12,500 acres of land in Lāhainā, Launiopoko, Wahikuli, and Kā'anapali (Donham 1994:4-5).

#### 3.2.3.2 Pioneer Mill Company in the 19th Century

James Campbell, a Lāhāina carpenter, began a small sugar mill in 1860 and was soon joined by Henry Turton and James Dunbar (Wilcox 1996:19 and 126) under the company name Campbell & Turton (HSPA Plantation Archives 2004). In 1862, the plantation became known as the Pioneer Mill Company, (The Pacific Commercial Advertiser 1864) and ten years later acquired the West Maui Sugar Company (The Pacific Commercial Advertiser 1874). For years Campbell was known

locally as "Ona Milliona," the millionaire of West Maui (The Hawaiian Gazette 1900). In 1877, Campbell turned over his company share to Turton (McCandless 1936:65; The Honolulu Advertiser 1935) who built a plantation railroad in 1882, which eased transportation of cane to the mill (Ramsay 1966:16) (see section 3.3.2.1 for the modern-day "Sugar Cane Train" tourist destination ("The Sugar Cane Train: The Lahaina, Kaanapali & Pacific Railroad"). In 1885, Hackfeld & Co. (later known as American Factors and modern-day Amfac/JMB) purchased controlling shares of the Mill (Jones and Osgood 2015:160; Wilcox 1996:126) and acquired additional land tracts controlled by Bernice Pauahi Bishop Estate that included important water sources vital to plantation expansion (Lee-Greig et al. 2008:31).

Another narrative places Benjamin Pittman as the founder of the Pioneer Mill in 1862 (Jones and Osgood 2015:160). Pittman then entered into a mortgage deed with Campbell and Turton in 1867 (Maly and Maly 2007:984). A separate account places this same sale in 1876 (The Honolulu Advertiser 1935), but this is likely a transposition of the year, since a court case between Campbell and Turton and a neighboring cane field places the plantation ownership pre-1871 (The Hawaiian Gazette 1871). It is possible that Campbell and Turton began the Mill in the early 1860s on land belonging to Pittman, but based on numerous sources it seems that Campbell and Turton were likely the founders of the Pioneer Mill Company.

As the Mill expanded into the 20<sup>th</sup> century, major change was also occuring across the Hawaiian Islands. Queen Lili'uokalani had worked determinedly to restore power to the monarchy after the death of King Kalākaua in 1891, but was illegally overthrown and imprisoned in her own home two years later. At the same time, the U.S. had entered war with Spain. With the threat of losing both a strategic military position and economic hub in the Pacific, President McKinley signed an annexation resolution in July 1898, at the protest of native Hawaiians and the Queen herself, making the Hawaiian Islands a Territory of the United States (Daws 1968:284-290). This act largely benefited industrious foreign businessmen on the Islands, and was directly in opposition to the desires of over half the population of native Hawaiians (Schamel and Schamel 1999).

#### 3.3 HONOKŌWAI AHUPUA'A AND THE CURRENT PROJECT AREA IN THE 20<sup>TH</sup> CENTURY

#### 3.3.1 1900-1950 – Early 20th Century and World War II

#### 3.3.1.1 Sugar Industry

The sugar industry ramped up in the 1900s, acquiring additional water sources and solidifying water agreements with the Honolua Ranch (later known as the Baldwin Packers, then Maui Pineapple Company, then in 1969 the Maui Land and Pine or ML&P, see section 3.3.2.2) who built and owned the Honokōhau Ditch, the largest water resource for the Mill (Wilcox 1996:131). The plantation also built water systems of their own totaling seven additional small systems: Kahoma, Kanaha, Kauaula, Launiupoko, Olowalu, and Ukamehame. Some of these streams also supplied nearby villages, the county, and the power plant (Wilcox 1996:134). In 1913, a new Honolua Ditch was built to support the failing Honokōhau Ditch (Wilcox 1996:130). These agreements and

resources largely contributed to the Pioneer Mills' success at the turn of the 20<sup>th</sup> century (Wilcox 1996:126).

The Pioneer Mill also hired the McCandless Brothers to drill for groundwater in 1883 (McCandless 1936:65), creating the "maui-type well," (a vertical mine-like shaft) and allowing for greater cultivation of land. The plantation expanded from 525 acres of land harvested in 1895, to nearly 3,000 acres in 1905 (Lee-Greig et al. 2008:32). By 1921, the McCandless Brothers had drilled 36 wells in Kā'anapali and 26 in Lāhainā (McCandless 1936:65).

Tunneling for perched water began just after well drilling, and included the collection of and dispersion of water straight from stream headlands deep in West Maui. Tunnels were driven into lava formations at high elevations to intercept large water flows and carried down the tunnel to the point of use (Wadsworth 1933:152). To these industrial men, water was an important resource for technological expansion of the sugar mill across the dry plains of Lāhainā. But to Hawaiians, water is life. As Wilcox (1996) explains,

While in English the word "water" means "a transparent, odorless, tasteless liquid, a compound of hydrogen and oxygen," in Hawaiian the word "wai" has many meanings: water and blood and passion and life. (Wilcox 1996:24)

Water diversion began in West Maui as early as 1876. The practice began deceptively, resembling agricultural practices similar to growing taro. But unlike taro production, the water used was not returned to the stream but instead permanently transported out of the watershed. Traditional agriculture failed with the loss of water to sugar plantations, and with few legal resources against these giant industries, little could be done by the native population (Wilcox 1996:29-32). Deforestation of native forests also contributed to these devastating environmental effects, leading public policy to shift toward conservation-focused development in the late 1900s (Wilcox 1996:38-42).

Following water expansion, the Plantation Mill Company built one of the first rail systems for hauling cane from the fields. This six-mile narrow-gauge railroad connected the Mill to the sugar fields ("The Sugar Cane Train: The Lahaina, Kaanapali & Pacific Railroad"). Further improvements included the construction of a 225-foot high brick-and-concrete smokestack to ease sugar cane processing (Lahaina Restoration Fund 2020). By 1930, the Pioneer Mill was the largest sugar producer in West Maui, and second in all of Maui Nui (Jones and Osgood 2015:158). A year later, the Pioneer Mill purchased the Olowalu Sugar Company, and by 1935 the Mill was producing over 10,000 acres of cane (HSPA Plantation Archives 2004).

#### 3.3.1.2 Labor and Strikes in the 20th Century

The Pioneer Mill Plantation has been characterized as a "family-oriented" place for laborers. To foster familial ties, the plantation employed an arguably "creepy amount of knowledge about their workers private lives," echoing mechanics of "Fordist" capitalism (Isaki 2016:85). In a study investigating the impacts of tourism on the lives of plantation workers, Isaki (2016) writes:

Remembered time softened the edges of then-existing menaces to retired-workers' intimate worlds. Nothing happened that could not have been survived, say the survivors. Sexual encounters were sanitized. Even the company's repression of labor union action, and the latter's impassioned resistances have been cabined within the confines of the anecdote. (Isaki 2016:91)

A mentality of "work or be hungry" (Masuda in Isaki 2016:91) engineered by the plantation economy allowed for a collective re-writing of the horrors of plantation life for laborers and their families. One example of the brutal treatment at the plantation is embodied by manager Louis Barkhausen, a German cousin of Hackfeld's who began working at the Pioneer Mill in the early 20<sup>th</sup> century. Many recall that he was a "rough, brutal, savage, and inhumane" manager (Solamillo 2012). Arthur Waal, the Lāhainā postmaster, remembered watching Barkhausen chase a group of Japanese laborers down a steep hill to Kā'anapali Gate with vicious dogs. The laborers later had to be treated for the wounds back at the plantation camp and incurred a wage deduction for the day (Waal in Solamillo 2012).

In 1900, in response to the accidental death of three workers at the Pioneer Mill, the Japanese workers demanded compensation for the families affected, for better hours, and firing of most of the overseers. The strike grew from Pioneer Mill to over 20 of the other plantations across Maui with participation from nearly 8,000 workers. Workers won numerous concessions, and in 1905 they went on strike again in response to a worker beaten who was beaten while on duty. This lead to additional concessions by management (Jones and Osgood 2015:89-90). Barkenhausen left the Pioneer Mill in 1908 (Solamillo 2012).

In 1910 there were 1,600 workers employed by the Pioneer Mill (HSPA Plantation Archives 2004). Roughly seventy-seven percent of those workers were comprised of Japanese individuals (Solamillo 2012). A sense of patriotism grew among Japanese workers, especially following a 1905 Japanese victory against Russia, leading to greater solidarity in subsequent strikes throughout the 20<sup>th</sup> century (Solamillo 2012). In 1932, the Mill had the highest number of "old time" Japanese sugar workers in all of the Hawaiian Islands (HSPA Plantation Archives 2004). By that time, the plantation included The Lāhainā Light and Power Company, Lāhainā Ice Company, the Lāhainā and Pu'ukoli'i Stores, and the Pioneer Mill Hospital (HSPA Plantation Archives 2004).

In 1947, with loss of labor to soldiers in WWII, additional labor strikes, and the internment of Japanese Americans in Haiku (Mebel and Pignataro 2007), the Mill lost \$700,000 and had roughly 7,000 acres of cultivatable land (Honolulu Star-Bulletin 1947:5). Railroad operations were abandoned in August of 1952, effectively ceasing all plantation railroading on the island of Maui (Ramsay 1966:26). In 1984, the Mill only harvested 4,000 acres (Hawaiian Sugar Planters' Association 1984:3). The plantation began to restructure the property for tourism, but even with these measures, the Mill lost \$7 million dollars between 1994 to 1999. The Mill finally closed its doors at the turn of the 21<sup>st</sup> century (Honolulu Star-Bulletin 1999:A12).

The Mill's workers slowly left their plantation camp homes. Wainee Village, the last of the West Maui plantation camps, closed in 1993, giving employees two to three years to find new housing

accomodations (Associated Press 1993). Efforts were made to begin converting Lāhāina into a tourist destination following the fall of the agriculture industry. The transition was a time for reflection, bringing environment groups to call attention to the unsustainable practices utilized by the Pioneer Mill (such as dumping wastewater into the ocean at Launiupoko, settling wastewater in local ponds, and the air pollution from burning sugar cane) with hopes that the future hotel industry would use eco-friendly practices (Isaki 2016:92). The transition also opened new employment opportunities for women who had little role in the workforce during the plantation era (Isaki 2016:90 and 91).

The plantation era was commemorated in West Maui through the Pioneer Mill smokestack (Isaki 2016:90), and city-wide celebrations such as the "Lahaina Plantation Days" (Tsutsumi 2010), replacing the indigenous history of the region with memorials to the 19<sup>th</sup> century agricultural history (Isaki 2016:93).

#### 3.3.1.3 Department of Hawaiian Home Lands Established

Between 1848 and 1898, the Hawaiian monarchy controlled the Crown and Government lands, leasing rights to those lands all the while. Once these lands were ceded to the United States Government following the 1898 annexation, these lands fell under the jurisdiction of the State,

From 1848 to the annexation [1898] of the country the common people never had any shadow of a claim in the Crown lands, but, as I say, those lands were for the support of the dignity of the throne as long as the monarchy lasted, and at the termination of the monarchy, because there were no private claims in the land, this title necessarily went to the United States Government, and the United Stated Government to-day does hold the title to those lands in trust for all the citizens in the Territory. (Alexander G. M. Robertson, Chief Justice of the Territorial Supreme Court in "H. R. 13500" 1920:22)

Although many LCA claims became null, claimants who had perfected their claim by purchasing their land outright through a Royal Patent Grant still held ownership of their land. However, over the years, many Hawaiians left these *kuleana* lands because large landowners were encroaching on the surrounding agricultural resources and buying water rights, starving the small agricultural lands and putting those landowners out of work (Kelly 1983).

In an effort to reclaim land rights and reestablish Hawaiian lifestyles of native Hawaiian people, the Hawaiian Homes Commission Act (HHCA) was brought to the United States Congress in 1920. This Act would open 200,000 of Hawaiian Homelands across the islands to Hawaiians for a 99-year homestead lease at an annual rental rate of \$1 (DHHL 2020). Passing this Act was largely due to the efforts of *Ahahui Pu'uhonua O Nā Hawai'i* (Hawaiian Protective Association), an organization started in 1914 by Prince Jonah Kūhiō Kalaniana'ole and other prominent Hawaiian figures to uplift the Hawaiian people (McGregor 1990:1). In 1920, Prince Kūhiō and Reverend Akaiko Akana traveled to Washington D.C. to speak at the hearing of the HHCA before Congress.

Some arguments made against the bill included notions that Hawaiians did not want to be patronized and given handouts, that they can "stand on their own two feet," and the bill was

discriminatory against white tax payers. ("H. R. 13500" 1920:15-16) Prince Kūhiō responded directly,

Judge Robertson objects to the bill for reasons which are not well founded [...] that the Americans or whites, as he calls them, would be subjected to increased taxation for the benefit of the Hawaiian, discriminating against the whites for the benefit of the Hawaiian. This statement is absolutely untrue. (Prince Jonah Kūhiō Kalaniana'ole in "H. R. 13500" 1920:129)

Additionally, Prince Kūhiō contextualized the historic events that lead to the conditions many Hawaiians were living in,

With the coming of the foreigner, conditions gradually changed, the lands were used in large tracts, and cheap labor had to be used to cultivate them successfully. With the cheap labor came competition in the trades until the Hawaiians were crowded out and forced into the tenements of the cities and town, becoming susceptible to all of the modern diseases which accompany civilization. If conditions remain when this race of people, my people, renowned for their physique, their courage, their sense of justice, their straight-forwardness, and the hospitality, will be a matter of history. (Prince Jonah Kūhiō Kalaniana'ole in "H. R. 13500" 1920:70)

When asked where the money for this Act would come from Rev. Akana stated that,

The land involved is our own, by moral equity, and the money with which to finance this project comes from the rental of this land. (Rev. Akaiko Akana in "H. R. 13500" 1920:54)

In reference to the issue of whether or not this would disenfranchise white settlers in the islands Senator Nuget stated,

Why should not these Hawaiian have the monopoly of their own land in their own country? (Senator John F. Nuget in "H. R. 13500" 1920:23)

The Department of Hawaiian Homelands (DHHL) was established following the Hawaiian Homes Commission Act of 1921, spearheaded by Prince Jonah Kūhiō Kalaniana'ole, and enacted by the U.S. Congress. In order to counteract the loss of Hawaiian land to foreign parties, DHHL was charged with setting aside and administering approximately 200,000 acres of land to be held explicitly for native Hawaiians to establish homesteads (Hiraishi 2018). When Hawai'i was annexed by the United States in 1959, these 200,000 acres of land were transferred to the State of Hawai'i where they were held in public trust to better the conditions of native Hawaiians. On Maui, 31,000 acres were established ("H. R. 13500" 1920:80), Kahikinui "25,000 acres, third class grazing when held in large tracts, most of land can be grazed only few months of year due to frequent dry spells; steep and rocky) and Kula (6,000 acres, second class agricultural land; crops can be expected one year out of three)" (McGregor 1990:38).

#### 3.3.2 1950-Present – Mid-20<sup>th</sup> Century to the Modern Era

#### 3.3.2.1 Planes, Trains, and Condominiums: Infrastructure for Tourism

Resort construction on the Kā'anapali coast began in 1959 as the Pioneer Mill owner, American Factors (now Amfac/JMB), began looking for other sources of income. The entreprenurial dream was to create "one of the foremost resort areas in the world" (Honolulu Star-Bulletin 1962a:21). The Royal Lahaina resort complex was the first to open in December of 1962 (Bryan 1964:6), closely followed by the Sheraton Maui Hotel (Honolulu Star-Bulletin 1962b:25). The same year, Amfac, Inc. also opened the Kā'anapali Airstrip with the goal of opening West Maui to more tourism. The airstrip closed in 1982 when news that Hawaiian Airlines would soon create its own airport in West Maui ("Kaanapali Airstrip" 2020). In 1987, the Kapalua Airport opened, located immediately east of the project area. The airport is still in use today and owned by the State Department of Transportation ("Kapalua Airport: West Maui" 2020).

By the late 1970s, Lāhāina was a leading tourist destination so much so that it was a model to other islands across the Pacific (Fisher 2006:130). Historic landmarks, like the Pioneer Mill smokestack ("Pioneer Mill Smokestack" 2017) and the Mill's "Lahaina, Kaanapali & Pacific Railroad" ("History" 2014) were converted to tourist destinations. According to statistics from Maui County, Lāhāina/Kapalua/Kā'anapali had the highest number of visitor units in 2016 (County of Maui 2017).

Hotel construction, especially on the coast, required the removal of hundreds of burials (Rockett 2010), specifically surrounding Pu'u Keka'a. Pu'u Keka'a, the Hawaiian name for "Black Rock," is the lava point at the northern most end of Kā'anapali Beach. The Pu'u has been known for centuries as a *leina a ke akua*, a jumping off point for the spirits. The sacred site was home to ancestrial burials for indigenous Hawaiians in ancient times through the plantation families and laborers during the plantation era (A. Akana 1997). Those who were involved in the grading of the surrounding lands for the various hotels in the area remembered seeing hundreds of bones scattered throughout. These bones were removed and re-interred, "but the spirits of [Hawaiian] ancestors still walk the land" (A. Akana 1997).

In 2001, the Hawaiian organization *Na Kupuna O Maui* staged a peaceful demonstration walking the path connecting two sacred West Maui sites: the Pu'u Keka'a and Moku'ula in Lāhāina. The demonstration ended with leaps from the Pu'u, spanning the space between the physical and spiritual realms (Rockett 2010).

#### 3.3.2.2 Maui Land & Pine Company

Missionaries have long impacted the landscape of the Hawaiian Islands. One of the most prolific missionary families were the Baldwins, when Reverend Dr. Dwight Baldwin and his wife Charlotte arrived in Lāhainā in the 1830s (Gomes 2009). Over the next century, the family purchased land across the island, finding more lucrative business as landowners than proselytizers.

The beginning of the pineapple industry on Maui started in 1890 when D.D. Baldwin began experimental pineapple plantings in Haiku, eventually incorporating the Haiku Fruit & Packing Co., Ltd. in 1903 (Baldwin 1920:12). In West Maui, the Baldwins owned the Honolua Ranch where they raised cattle. In 1904, the Honokōhau Ditch was completed, financed by the Pioneer Mill, and owned and maintained by the Honolua Ranch (Jones and Osgood 2015:114). Ten years later, the Baldwins diversified their Honolua Ranch by adding a pineapple growing operation (Gomes 2009). In 1920 the Honolua Ranch was renamed Baldwin Packers, where they grew and canned pineapple at the Honolua Plantation, utilizing the Pioneer Mills Co.'s railroad to assist in hauling the fruit (Baldwin 1920:15). Three years later, the Baldwin Packers owned 22,000 acres in West Maui (Gomes 2009). By 1969, the Baldwins and Alexander & Baldwin Inc., merged their West Maui and East Maui ventures forming the Maui Land & Pineapple Company, Inc., and listed the company's stock for public sale (Hawaii Tribune-Herald 1969:8).

Looking to further expand their entrepreneurial ventures across Maui, the Baldwins expanded into resort development, taking advantage of their nine miles of "breach-fringed coastline" (Sutton 1978). In the 1969, Colin Cameron took control of ML&P from Alexander & Baldwin (Cho and Tanji 1999:A1), and quickly rezoned 325 acres (Gomes 2009) of their 22,000 acres farmland for resort development under the Kapalua Land Company, a subsidiary of ML&P (Sutton 1978). By 1978, the "centerpiece to the whole pineapple paradise: The Kapalua Bay Hotel" opened with 196 rooms (Gomes 2009), fronting "Fleming's Beach," locally named for D.T. Fleming, long-time sugar and pineapple land manager (Sutton 1978). In 1985, the Kapalua Bay Hotel was sold for \$26 million to a California limited partnership in order to shore up the financial condition of the Kapalua Land Co. (Harpham 1985:B-5). The purchase included the facilities of the hotel, while the ML&P retained ownership of the land (Gomes 2009).

In 1988, the ML&P set aside 8,304 acres of land in the West Maui Mountains for the Pu'u Kukui Watershed Preserve (Maui Land & Pineapple Company Inc. 2020), managed in partnership with The Nature Conservancy. Four years later, ML&P officially granted The Nature Conservancy a conservation easement to open the Preserve to the state's Natural Area Partnership program and to receive state funding to maintain the acreage. Among the flora and fauna of the Preserve are 'ōhia forests and other endemic plants such as greensword, as well as 'i'iwi, 'apapane, and 'amakihi birds (The Honolulu Advertiser 1992:A4).

The 1990s marked a significant change in the ML&P's entrepreneurial focus. Instead of focusing on their pineapple subsidiary, the company continued to shift towards resort development. In 1992, the Kapalua Land Co. partnered with the Ritz-Carlton Hotel Co. and Nissho Iwai Corp. of Japan to open the 550-room Ritz-Carlton Kapalua hotel (Tanji 1989:A-4). Once construction began however, the project became less acclaimed for the resort venture but rather from a spectacular feat of grassroots activism. During excavation of the sand dunes at Honokōhau Bay, Hawaiian *iwi* (bones) were found, totaling 1,200 burials (Richardson 2019). Burials were reinterred and protest efforts forced hotel construction to move further inland. Eventually in

1990, the Hawaiian burial treatment law was passed ensuring that unmarked burials receive the same protections as modern-day cemeteries (Richardson 2019).

In 1999, AOL founder Steve Case purchased a 41% stock in ML&P becoming the largest stakeholder in the company and stabilizing its finances (Cho and Tanji 1999:A2). In further efforts to revitalize ML&P, the company decided to partner with other resort conglomerates to raze the Kapalua Bay Hotel and replace it with a \$300 million condominium and luxury time-share resort (Shaefers 2006). At the end of the 20<sup>th</sup> century, the agricultural operations of West Maui began to flail as the neighboring resort industry boomed. In response, ML&P ended pineapple canning in 2007, focusing on their own resort development enterprises. In 2008, the company cut their pineapple production in half, and the following year shut down roughly 3,000 acres of pineapple production in Hāli'imaile and Haleakalā, and Honokōwai. The Ritz-Carlton Club and Residences at Kapalua Bay, a joint venture with ML&P and others, opened the same year (Gomes 2009).

Back in 2002, when the DHHL had acquired additional funds to expand homelands through Federal action (see following section), ML&P began leasing their 510 acres of agricultural land (TMK 4-4-02:015 & 18) in Honokōwai from the DHHL through lease S-5267 (Department of Hawaiian Home Lands 2002:36). This lease was to expire come 2011, but with their focus shifting towards resort development and with the pineapple industry in West Maui slowly failing, they severed the lease of these lands in 2009 (Department of Hawaiian Home Lands 2010:77).

ML&P continued to retain their ownership of the Honokōwai Reservoir, built in 1918 and modified in 1999, in the center of the project area up until present-day (DLNR Engineering Divison 2020).

#### 3.3.2.3 Department of Hawaiian Home Lands Expands

Across the islands, *kuleana* lands slowly disappeared since the days of the Mahele. In 1940, only 35% of these lands had survived, and by 1980, only 19% remained. Areas that were impacted the most included plantation districts where large-scale farms slowly surrounded and impeded natural resources, eventually forcing owners off their *kuleana* land (Kelly 1983). In Honokōwai, none of the 442.66 acres of LCA/Royal Patent Grant awards within the project area remained owned by their original claimant (Table 3).

In continued efforts to remedy the subjugation of the Hawaiian people, the DHHL received Federal assistance to expand the program. In 1992, the Federal Government reallocated money and additional lands to the Hawaiian Home Lands program "as compensation for the state's improper or unauthorized use or transfer of 30,000 acres of Hawaiian home lands since statehood in 1959" (Dunford 1992). This process resulted in \$13.8 million "set aside for DHHL to develop more homes and agricultural lots for native Hawaiians," specifically \$925,000 to develop former sugar cane lands at Honokōwai (Dunford 1992). By 2002, Maui had received an additional 2,625 acres of public lands (Department of Hawaiian Home Lands 2002:18), and by 2003, the DHHL was prepared to begin development planning of 790 acres of land in Honokōwai with up to 1,000 single-family homes (Hurley 2003).

According to the 2004 Maui Island Plan from the DHHL, 510 acres of the 776.5 aces of available land in Honokōwai (TMK 4-4- 01:15, 36 and TMK 4-4-02: 03, 08, 09, 11, 15, and 18) was in use by the Maui Land & Pineapple Company, Inc. (TMK 4- 4-02:15 and 18, portion) until their lease expired in 2011 (PBR Hawaii 2004:5-6). However, in December of 2009 following a global recession, Maui Land & Pineapple Company, Inc. closed their pineapple operations, (Gomes 2009) and terminated their lease of 510 acres of pineapple land in Honokōwai (Department of Hawaiian Home Lands 2010:77). The ML&P has however retained ownership of the Honokōwai Reservoir (State ID: HI00058) up to present- day (DLNR Engineering Divison 2020).

In 2011 DHHL completed an exploratory well in Honokōwai to provide potable water to the development of Villages of Leiali'i Phase 1B development and began an environmental impact assessment for the region (Department of Hawaiian Home Lands 2013:35). DHHL continued to lease out lands to private pineapple farmers and local resorts, until 2019 when the planning for the Honokōwai Master Plan began.

#### 3.3.2.4 Efforts to Protect Natural Resources of Honokōwai

#### 3.3.2.4.1 Wahikuli-Honokōwai Watershed Management Plan

The Wahikuli and Honokōwai Watershed Plan were created to identify land-based pollutants and to determine a plan of action and implementation to remediate their effects on coral reefs (Sustainable Resources Group Inten'l 2012:i). Over the past century, a drastic alteration of the landscape— via housing developments, infrastructure, tourism— has resulted in a 50% decline in the health and presence of coral reefs along in northern Kā'anapali (Sustainable Resources Group Inten'l 2012:i). A study was conducted to address the pollutant control in an effort to improve water quality, clarity, and overall aquatic health.

#### 3.3.2.4.2 The Honokōhau Ditch Controversy

In 2019, a group of West Maui community members filed a complaint against owners of the Honokōhau Ditch for wasting water from the Honokōhau Stream. Those owners included Maui Land & Pine, Kapalua Water Co., a subsidiary of ML&P, and Kaanapali Land Management Corp. (KMLC). The Honokōhau Ditch currently diverts "most of the stream water to areas between Lahaina and Kaanapali [...] on MLP lands" (Lahaina News 2019). People claimed to have seen large amounts of water dumped flowing through the Hahakea/Wahikuli Gulch, meanwhile local *loʻi* farmers had minimal water for their own crops (Lahaina News 2019). In response, the Commission on Water Resource Management unanimously approved recommendations for ML&P to upgrade the Honokōhau Stream and fix damages from 2018 hurricanes in order to prevent further water wasting (Imada 2019).

#### 3.3.2.4.3 Pu'u Kukui Watershed Preserve and Makai Conservation Lands

Maui Land & Pineapple Co. Inc. currently owns and manages the 8,304-acre Pu'u Kukui Watershed in partnership with the State of Hawai'i DLNR, The Nature Conservancy of Hawai'i, and Kamehameha Schools Maui. The Preserve is the largest privately owned preserve in the

State, and home to endangered flora and fauna and a vital water resource for West Maui (Pu'u Kukui Watershed Preserve 2014).

#### 3.3.2.4.4 Kapunakea Preserve

Kapunakea Preserve was established in 1992 when Pioneer Mill Company, Ltd., a subsidiary of Amfac/JMB Hawaii Inc., granted the Nature Conservancy a conservation easement of 1,264 acres in the West Maui Mountains in order to preserve native ecosystems and rare flora and fauna. The Preserve stretches across dry lowland forests at 1,000 feet to montane bogs of Pu'u Kukui at 5,400 feet. The north half of the Preserve is within Honokōwai, and includes the upper reaches of the Honokōwai Stream, which is diverted at this time for agricultural use. The southern ridge is within Hanaka'o'o (The Nature Conservancy 2020). Remnants of the Pioneer Mill's water diversion and other agricultural construction is still evident along the Honokōwai Gulch (Donham 1994:5).

#### 3.4 PREVIOUS ARCHAEOLOGY

The first archaeological investigations conducted in Maui began in 1916 when John F. Stokes of the Bishop Museum executed a reconnaissance study of pre-contact architecture focusing specifically on *heiau* (temples) in Maui. Winslow Walker continued Stokes' work with an island-wide archaeological survey of Maui between 1928 and 1929, also paying particular attention to the monumental structures across the island *heiau* and *ko'a* (shrines). The following summarizes their field notes on *heiau* within and adjacent to the project area:

Location	Heiau Name	Notes
Lahaina	Heiau Wailehua	Stokes (1916): "land of Makila. Destroyed. Site at east
District		end of Lahaina, where cane lands end, and between
		road and beach. Class not known, though drums are
		heard at the night of Kane. Not Seen." Source: Hinau
	Heiau Halekumukalani	Stokes (1916): "land of Puehuehu, now in cane field; for
		sacrifice. Not Seen." Source: Hinau. Note from Walker:
		"Destroyed (1929)"
	Heiau Halulukoakoa,	Stokes (1916): A sacrificial heiau in Mala. "Connected
	Walker Site 36	with the last was the story of an <i>olohe</i> ." Source: Hinau
		W. M. Walker (1929): A large <i>heiau</i> north of Kapunakea
		Camp with some coral in construction. Destroyed for
		rock ballast on the railroad and razed for construction of
		a playground.

Endangered Hawaiian Archaeological Sites Within Maui County, included Honokowai Gulch and Statewide Inventory of Historic Places for the Island of Maui: first record of sites -1207 (45 petroglyphs) and -1208 (house outline) "The original report is not in Bishop Museum archives. The (Kahoma Stream Terrace System Complex [SIHP 50-50-03-1775]) containing a minimum of 36 cerraces, two 'auwai, seven cement structures, and four free-standing walls; in addition to a large ourial area containing a minimum of 25 graves (Pu'u Piha Cemetery [SIHP -00226]). A second just upland of SIHP -1775. Structural remains of SIHP -1775 were interpreted as historic era Reconnaissance: Walk through survey of Kahoma Gulch that identified terraces with dry-stacked stone retaining walls in the upper 335 meters of the project area and no archaeological resources staff said the inventory survey was done by Bishop Museum staff for a government agency. They Archaeological Survey: Phase I survey documenting one major agricultural terrace system cerrace system, referred to as the Haia System (SIHP -1773), was identified and briefly recorded n the lower section. Study noted the presence of a Hawaiian burial ground outside of the project features while the terraces and house foundation of SIHP -1773 was interpreted as probable prefoundations, rock walls, stone-lined stream channel, retaining walls, and a historic midden area. Ka'opala -- archaeological features consisting of retaining wall sections along the north slope of Postulated to all be related to post-contact use and occupation or modified in the historic era. Archaeological Investigation: Pedestrian survey of the Wailuku flood prevention project area and eight gulch basins within the Honolua Watershed. The following summaries are within or cultural deposits observed in the north bank of the primary stream channel. Cultural material Māhinahina -- Identified Sites 4 (SIHP -00218) and 5 (SIHP -00219) consisting of two exposed content included fire cracked rock, charcoal, coral, marine snails, cowrie, pipipi, sea urchin Kahana -- Probable historic house site, stone alignments possibly representing structural Pohakukā'anapali -- No archaeological features identified. area and approximately 10 meters from the stream bank. more, sites D15-2, 3 (pg 40-41, 59) (Orr 2005:65) tried to locate a copy to no avail." (Orr 2005:65) adjacent to the project area and are as follows Type of Study and Summary of Findings the gulch. contact. 		÷.

		spines, and small mussel shells. a small fire pit and <i>imu</i> , or earth oven, was also visible in the layer. Honokōwai – Site 6 (SIHP 50-50-03-1208) includes a complex of several low stone alignments and platforms located on the north slope of the gulch and previously recorded in the 1973 Statewide
(Griffin et al. 1976)	Honokōwai to 'Alaeloa	Archaeological Survey and Salvage: Salvage excavations on a previously identified cultural deposit documented as SIHP -217 and -218 at Māhinahina Gulch by Kaschko (1974). During the course of excavation, it was determined that the two historic properties were extension of the same deposit and consolidated under a single number, SIHP -225. Fieldwork resulted in the identification of hearths scattered throughout with recovery of marine fauna to include shell and fish remains. Recovered charcoal returned radiocarbon dates ranging from A.D. 1000 to A.D. 1778.
Davis 1977 in (Donham 1994; Orr 2005)	Honokōwai Valley	<b>Archaeological Inventory Survey:</b> Four complexes (sites SIHP-228 through -231) identified during survey for a waterline project, revealing evidence of prehistoric and early historic occupation of the Honokōwai Valley between 800 and 1,000 feet in elevation. The lower portion of the gulch had been extensively modified with stone-faced terraces for wet-land and dry-land <i>lo'i</i> , habitation platforms, retaining walls, field shelters, water channels ( <i>auwai</i> ), diversion dams, and a possible agricultural shrine ( <i>ko'a ho'oulu'ai</i> ). Features were found on both sides of the stream and continued upstream outside the survey area. At the time, no additional survey work had been done upstream of survey area.
(Griffin et al. 1976)	Honokōwai to 'Alaeloa	<b>Archaeological Survey and Salvage Excavation:</b> Five sites located during survey: SIHP-215 (trail), - 216 (wall, <i>ahupua</i> ' <i>a</i> boundary), -217 (habitation cultural deposit), -218 (habitation cultural deposit), -227 (wall). Sites -217 and -218 were incorporated in site -225 in Māhinahina Gulch, and the only two sites recommended for further investigation. Site -225 was recommended for salvage excavation and 37 square meter test unit were excavated. Results produced a homogenous deposit of shell, fine grain soils, coral and basalt pebbles, and artifacts, as well as hearth deposits vertically and horizontally. Radiocarbon dates indicate that the site was initially occupied about A.D. 1000 and sporadically used until A.D. 1778.
(Hommon and Ahlo 1982)	Kapalua Airport Māhinahina	Archaeological Reconnaissance: Surface field inspection of an approximate 58-acre area of then active sugar cane lands. Results of the walk through noted that the entire project area was covered in sugar cane with no non-cultivated areas and anticipated that the nearly 50 years of mechanized commercial agriculture cultivation would have resulted in intensive ground disturbance. No significant historic properties were observed on the surface, no subsurface testing was undertaken.

M	A ARCHA
	And

(Komori 1983)	Kahana Gulch	<b>Archaeological Investigation</b> : Pedestrian survey, recordation, and mapping of seven historic properties consisting of an unmodified overhang-shelter and terrace segment (50-50-01-1741), a series of terraces and a platform (SIHP -1742), a wall segment, parallel stone alignments, and rectangular enclosure (SIHP -1743), wall segments and terraces along the stream cut (SIHP -1744), a partially enclosed alluvial flat with terraces and other natural features (SIHP -1745), two stone walls (SIHP -1746), and a small overhang shelter and stone terrace (SIHP -1745), two stone
(A. T. Walker and Rosendahl 1985)	Kahana Gulch	Archaeological Testing: Subsurface testing of multi-component site complexes identified within Kahana Gulch (SIHP 50-50-01-1742 through -1744) initially recorded by Komori (1983) and interpreted as historic era sites related to ranching. While limited surface collections supported historic occupation of these sites, results of both mechanical and manual subsurface testing resulted in a re-interpretation of the historic properties as temporary or extended habitation sites associated with pre-contact to proto-historic era agricultural activities.
(Barrera 1989)	Honokōwai to Hanaka'o'o	<b>Reconnaissance</b> : Pedestrian survey of three alternatives for the then proposed Lahaina Bypass, beginning at Puamana Beach Park and branching out to various elevations and terminating at either Hanakao'o (all three alternatives) or Honokōwai (Alternative C upper elevation). The reconnaissance level survey resulted in the initial identification of two previously unrecorded sites, an agricultural complex at Kahoma Stream and a habitation terrace at Honokōwai Stream, and noted that the SIHP -1598 (Pioneer Mill), SIHP -1775 (Kahoma Stream Terrace System Complex), SIHP -1596 (Hale Pa'i Printing House), SIHP -1208 (Kahoma Petroglyph Complex), SIHP -1506 (Hale Pa'i Printing House), SIHP -1208 (Kahoma Petroglyphs), and SIHP -1208 (Honokōwai House Outline) were either intersected by the proposed alternatives or in close proximity to the proposed alternatives.
(Jensen 1989)	Wahikuli	<b>Inventory Survey</b> : Pedestrian survey across an approximate 1200-acre area. Twelve historic properties comprised of 44 component features were identified within the project area. Feature types included shelters, platforms, walled enclosures, petroglyphs, grave sites, agricultural terraces, and a single historic agricultural access road alignment. Functional types included habitation, pre-contact and historic era agriculture, religion and ceremony, burial, and recreation; as well as archaeological sites of an indeterminate function.
(D. L. Fredericksen et al. 1990)	Kahana, Mailepai, 'Alaeloa	<b>Archaeological Inventory Survey</b> : Inventory survey of an approximate 10-acre area. While an old railroad easement was located within the study area (SIHP 50-50-01-4103), pedestrian survey of the easement and ground examination did not identify construction or material associated with railroad operation. Disturbance associated with commercial agriculture activities was also noted on the surface. Examination of geotechnical tests noted the presence of modern trash debris and fill. No surface indications of either intact or previously disturbed historically significant cultural

í	INA ARCHAEOLOGY
	÷.

		material remains or historic properties identified within the project area. No subsurface testing
		undertaken as a part of the study.
(J. Kennedy 1990)	Kahana	Archaeological Inventory Survey: Pedestrian survey resulting in the identification of a two-tiered platform (50-50-03-2878) interpreted as a ceremonial structure or burial, as well as a petroglyph pecked into a boulder (SIHP -2879).
(Jensen 1991)	Honokōwai, Wahikuli, Panaewa, Kula, Halakaa, Puehuehunui, Pahoa, Polanui, and Launiupoko	<b>Archaeological Inventory Survey:</b> Pedestrian survey of a 7-mile corridor. Four archaeological sites containing 28 components were identified within or adjacent to project area. Three of the four sites were previously recorded (SIHP-2484: enclosure, -2489: agricultural complex, and -2490: habitation complex). The fourth site (-2847: enclosure) is newly identified. All sites identified as significant for information potential and recommended for preservation. Site -2489 may also be culturally significant as it may be associated with a burial(s).
(J. Kennedy and Denham 1992)	Kahana	<b>Archaeological Inventory Survey</b> : Follow up survey of an approximate 50-acre parcel, the majority of which was covered in covered in sugar cane, initially covered and reported by Kennedy in 1990. Two historic properties, originally identified by Kennedy, were re-identified and further documented. SIHP 50-50-01-2878 was confirmed as a two-tiered platform identified as a burial and -2879 is a pecked petroglyph on a single basalt boulder.
(W. M. Fredericksen 1995)	Kahana	<b>GPR Survey</b> : Remote sensing survey of an area directly adjacent to Mailepai cemetery utilizing the Ground Penetrating Locator (GPL) III. Did not identify Fe (iron) signatures outside of the cemetery as defined on the surface indicating a low probability of the presence of historic graves outside of the cemetery the cemetery boundary.
(McGerty and Spear 1996)	Māhinahina 4	<b>Archeological Inventory Survey</b> : Pedestrian survey and subsurface testing of an approximate 3.3- acre project area. Seven historic properties were identified and included a historic era agricultural alignment (SIHP 50-50-03-4215); a low wall dry-stacked wall (SIHP -4216) related to historic era agriculture; a well-constructed terrace, alignment, low wall, rock mound, sub-surface ash deposit, and irregularly shaped well (SIHP -4217) related to historic era agriculture; a historic cemetery (SIHP -4218); a multi-component platform with a soil interior and two terraces (SIHP -4219) interpreted as burial markers; a rock-faced terrace and three alignments (SIHP -4220), and a <i>ki'owai</i> (SIHP -4221).
(Goodwin and Leineweber 1997)	Wahikuli	<b>Inventory Survey</b> : Archaeological survey of an approximate 1,100-acre project area for the Villages of Leiall'i project with a focus on both extant and former areas of standing historic sugar plantation architectural structures. The study resulted in the documentation of SIHP 50-50-03-04420 which consisted of six structures, various features associated with irrigation ditches, and six archaeological features associated with Pioneer Mill plantation operations within Wahikuli Ahupua'a.

Fredericksen		well as a historic retaining wall and shoulder barrier area (SIHP -4798) and a second retaining wall
(666T		(SIHP -4/99) both of which are associated with the Lower Honoapi IIani Koad.
(Monanan 2003)	Нопокома	Archaeological Assessment: Pedestrian survey and backnoe testing comprised of eight trenches
	Māhinahina	completed. Subsurface excavation showed the presence of modern refuse and fill, along with sand
		that had likely been introduced. No historic properties identified.
(Tulchin and	Māhinahina 4	Archaeological Assessment: Pedestrian survey and subsurface testing consisting of four 40 cm x
Hammatt 2003)		40 cm shovel tests within a 0.2-acre parcel. No historic properties identified, and no significant
		subsurface material found. Report includes 11 previously identified sites adjacent to project area
		(SIHP-217, -218, 2491, 2847, and -4215 through -4221). Based on project area proximity to a
		historic cemetery (-4218) and possible burial mounds (-4219) documented by McGerty and Spear
		(1996), researchers recommended an archaeological monitor for all ground disturbing activities.
(D. L.	Wahikuli	Inventory Survey: Pedestrian survey and subsurface testing of an approximate 0.5-acre parcel.
<b>Fredericksen and</b>		Surface survey and mechanically assisted testing of seven exploratory trenches did not result in
Fredericksen		the identification of historically significant or culturally sensitive sites or features within either
2003)		surface or subsurface contexts.
(Pantaleo and	Māhinahina 1-4 to	Archaeological Inventory Survey: Pedestrian survey and subsurface testing of approximately 360-
Titchenal 2004)	Kahana	acres. Systematic pedestrian survey and mechanical excavation of 20 linear trenches resulted in
		the identification of two historic properties. SIHP 50-50-03-5553 is an abandoned flume located
		within Māhinahina 1-3 Gulch and SIHP -5641 which consists of a historic bottle scatter.
		Additionally, an isolated hammerstone or 'ulu maika was identified on a pineapple road in the
		southeastern portion of their project area. No intact subsurface cultural material deposits were
		identified during the course of mechanical testing.
(Formolo et al.	Hanaka'o'o	Inventory Survey: Pedestrian and subsurface survey within former fallow sugarcane fields for the
2005)		Keawe Street Extension. Subsurface investigation consisted of mechanically assisted excavation of
		eight linear trenches that ranged in depth from 0.7 m to 1.7 m deep. While trenching showed
		deeper soil development at the lower elevations within the project area, as opposed to the upper
		elevations were bedrock was encountered in shallower contexts, testing did not result in the
		identification of either intact or previously disturbed cultural deposits or culturally sensitive finds.
		Recommended archaeological monitoring for construction activities that extended beyond 0.61m
		(2ft) in conjunction with examination of geotech samples prior to development of a monitoring
		plan.

(Dega 2005)	Honokōwai	Archaeological Assessment: Pedestrian survey and subsurface testing consisting of eight backhoe
	Māhinahina 4	trenches within a 0.11-acre area (23 m x 23 m). No historic properties identified.
(Conte 2005)	Kahana	<b>Archaeological Assessment</b> : Archaeological inventory survey of a 0.482-acre area. Pedestrian survey did not result in the identification of any new or previously recorded historic properties within the project area. Sub-surface investigation completed with four backhoe trenches across the undeveloped sections of the project area. No historic properties identified.
(PBR Hawaii 2005)	Māhinahina	<b>Archaeological Inventory Survey</b> : Conducted by Archaeological Services Hawaii in 2004. No significant surface cultural finds with the exception of a plantation-era irrigation flume and isolated surface artifacts. Due to extensive disturbance from pineapple cultivation, 20 backhoe trenches were excavated, no cultural remains or deposits encountered in trenches.
(Pestana and Dega 2007)	Kahana	Archaeological Inventory Survey: Pedestrian survey and subsurface testing of approximately five acres. A section of the Old Pioneer Mill Railroad (SIHP 50-50-03-4997) was identified, as well as the historic cemetery known as Mailepai Cemetery. No historically significant cultural material deposits or features identified in a subsurface context.
(Munekiyo & Hiraga 2008)	Lahaina	<ul> <li>Archaeological Inventory Survey: A full pedestrian survey was completed by Scientific Consultant Services, Inc. (SCS), no excavation. The Honokohau Ditch (SHIP-1591) was identified. No other sites or cultural deposits were observed, as the area had been "intensively modified for pineapple cultivation throughout time."</li> <li>Archaeological Assessment of the Kahana Well was conducted by SCS. No historic sites or materials were present, likely due to impacts of historic and recent pineapple and other agricultural activities in the area.</li> </ul>
(Corbin and Rosendahl 2008)	Wahikuli	<b>Inventory Survey</b> : Pedestrian survey to re-acquire the locations of sites identified during PHRI's initial survey of the Villages of Leiali'i Affordable Housing Master Plan area (Jensen 1989). The field crew was able to locate previously identified historic properties. No additional sites were identified within the area of study.
(Cordle and Dega 2008)	Wahikuli, Kuhua, Pu'uiki	<b>Inventory Survey</b> : Systematic pedestrian survey along four proposed road corridor segments along existing field roads. The study resulted in the identification and documentation of five Historic-era features associated with previously recorded historic era commercial sugar infrastructure (SIHP 50-50-03-4420) constructed by Pioneer Mill Co. These features include two reservoirs (Features 4 and 6), a concrete-lined ' <i>auwai</i> (irrigation ditch) (Feature 5), and two earthen furrows or ditches that parallel two of the existing dirt roads (Features 7 and 8).

ž	AIMA ARCHAEOLOGY
Å	AIMA ARCH

(Shefcheck and Dega 2008)	Wahikuli	Inventory Survey: Systematic pedestrian survey along two proposed road corridor segments that identified additional features (Features 7-9) of previously recorded historic era commercial sugar infrastructure (SIHP 50-50-03-4420) constructed by Pioneer Mill Co.
(Lee-Greig et al. 2008)	Kelawea, Paeohi, Wahikuli	<b>Inventory Survey</b> : Systematic pedestrian survey and mechanically assisted exploratory testing of an approximate 17.5 acre project area resulted in the identification of two historic clearing mounds (SIHP 50-50-03-6492 and -6596) related to field improvement activities associated with the commercial sugar agriculture. Excavation of 26 linear trenches, as well as, sections of the of the clearing mounds did not encounter historically significant or culturally sensitive sites or features in subsurface contexts.
(Lee-Greig et al. 2009)	Wahikuli	Inventory Survey Level Documentation: Formal archaeological documentation of over 400 early historic era agricultural terraces (SIHP 50-50-03-06277), a portion of which was identified in the original 1990 alignment for northern terminus of Lahaina Bypass Phase IA.
(Chris Hart & Partners 2009)	Lahaina	<b>Archaeological Field Inspection</b> for 0.75-acre lot for Proposed New Cafeteria at Lahainaluna High School: two historic features noted relating to the original staff housing, likely dating to 1831 (a historic staircase and basalt terrace wall). Monitoring recommended. (Chris Hart & Partners 2009:Appendix D)
(Belt Collins Hawaii Ltd. 2010)	Wahikuli	<b>Archaeological Inventory Survey</b> was completed by Paul H. Rosendahl, PhD., Inc. A total of 10 sites were identified, five sites were GPS located within the project area (SIHP-2484 to -2488), while the remaining sites where either in/near gulches or otherwise outside the project area. Sites included: four habitation enclosure sites (-2484, -2485, -2488, -2480), four agricultural terrace sites (-2478, -2479, -2481, -2481, -2481, -2487), and one possible grave with cairns/mounds (-2479, -2481, -2486 was noted as potentially culturally significant. Archaeologists recommended further data recovery and possible preservation for all sites except for site -2487. (Belt Collins Hawaii Ltd. 2010:4-1, 4-2)
(Dagher and Dega 2014)	Honokahua, Honokeana, and Honokōwai	<b>Archaeological Inventory Survey</b> : Pedestrian and subsurface survey of six areas within Honokahua (Area 1); Honokeana (Area 2 and 3); and Honokōwai (Areas 4-6). Nearest to the study area of Kahana and Māhinahina were the studies conducted in Honokōwai. Area 5 contained a historic terrace related to commercial agriculture (SIHP -7175) while survey of Areas 4 and 6 resulted in no historic properties identified.
(Perzinski and Dega 2014)	Kahana	<b>Archaeological Assessment</b> : Inventory survey investigation of an approximate one-acre area. Pedestrian survey resulted in no surface indications of either intact or previously disturbed historically significant cultural material remains or historic properties identified within the project area. Evidence of extensive ground disturbance associated with commercial pineapple agriculture. No subsurface testing undertaken as a part of the study.

(Dagher and Dega		
	Mahinahina	Archaeological Field Inspection: Land use history of the project area consisted of commercial
2015)		sugar cane and pineapple cultivation. Discussions with employees of the water treatment plant
		indicated no culturally significant cultural materials had been observed during previous excavation
		in the area. Inspection resulted in no historic properties identified or subsurface deposits
		anticipated.
(Sea Engineering	Hanaka'o'o	Environmental Impact Statement: Archaeological work was conducted by International
lnc. 2018)		Archaeology, LLC in 2015 for the Hanaka'o'o Beach Park restoration project. A single site was
		identified—Hanaka'o'o grinding stones (SIHP 50-50-03-1204), that consists of eight "smooth
		shallow and roughly circular depressions distributed across the superior surfaces of two basalt
		boulders. These hoana, or grindstones, were used to shape and sharpen traditional Hawaiian
		adzes; the depressions were formed by the grinding action (facilitated by sand and water) of
		innumerable stone tools upon the boulder surfaces. The site is located among a cluster of basalt
		boulders on the Hanaka'o'o Beach Park, approximately 30 feet west of the park bathrooms" (Sea
		Engineering Inc. 2018:51). Archaeological monitoring was recommended.

## 3.4.1 Previous Archaeological Work Specific to the Current Project Area

Honkōwai is one of the four valleys in Kā'anapali that had extensive *lo'i* lands, rising in tiers up the gulches and irrigated from streams of the West Maui Mountains (Handy et al. 1972:272, 494). *Kuleana* claims in Honokōwai often consisted of small agricultural plots concentrated in the arable sections of stream bottoms, stretching from *makai* to *mauka* (Donham 1994:3) with stone terrace construction (Kaschko 1974).

The presence of petroglyphs in the project area at site SIHP-1208 (Barrera 1989) indicate that in addition to agricultural ventures, the early Honokōwai community also participated in artistry activities and behaviors indicative of long-term habitation. Just north of the project area in Māhinahina, petroglyphs were also noted in archaeological survey at site SIHP-2879 (J. Kennedy 1990).

After the arrival of Western vessels, the small *kuleana* claims that spanned the fertile gulches were purchased and consolidated by large-scale agricultural Mills and Plantations, destroying much of the pre-contact archaeology (Munekiyo & Hiraga 2008; PBR Hawaii 2005). The cultural deposits often encountered in archaeological survey include primarily historic agricultural features such as pineapple and sugar fields, wells, and historic cemeteries (Dagher and Dega 2014; McGerty and Spear 1996). An historic trail constructed by Pioneer Mill in the twentieth century follows the south side of the Honokōwai Gulch within the Kapunakea Preserve, and is an example of non-vehicular transportation pre-dating modern agriculture construction (Donham 1994:5).

Overall however, prehistoric archaeological resources in Honokōwai are sparse (Dega 2005; Hommon and Ahlo 1982; Monahan 2003; Tulchin and Hammatt 2003). Many of the *heiau* in the area have been destroyed or overwhelmed by the sugar cane fields (Stokes 1916; W. M. Walker 1929). With the absence of physical material to guide research, the remaining section of the report will focus on other forms of historical knowledge, including oral histories and memories of those who still have connections to Honokōwai today.

# 4.0 CONSULTATION METHODS AND RESULTS

Scoping and community outreach for this cultural impact assessment was completed by ethnographic researcher Kim-Hee Wong, M.A.

# 4.1 SCOPING METHODS

In order to identify individuals with knowledge of the traditional cultural practices within and adjacent to the proposed project as it relates to this study, contact was initiated with government agencies, advisory councils, local community organizations, and traditional cultural practitioners, along *kama'āina* (local residents) and *kūpuna* (knowledgeable elders) with generational ties to the proposed project area via an introductory letter and project related figures. Follow-up attempts were then made to all contacts on the initial mailing list in a good-faith effort to make contact. Each correspondence included an introduction letter and project area maps showing the location of the proposed project (see Figure 4-1 through Figure 4-3 for the letter, enclosures are Figure 1-1 through Figure 1-5).

Subject: Cultural Impact Assessment for the Department of Hawaiian Home Lands Honokowai Agricultural Homestead Community Master Plan.

Aloha,

You have been identified as a resource person with knowledge of the mo'olelo, historic sites, or cultural traditions in the Ka'anapali Moku, West Maui. We are writing to you to encourage your participation in the development of a Cultural Impact Assessment for a proposed Hawaiian Home Lands project In Honokowai.

This letter provides information about 'Aina Archaeology, DHHL's proposed project, and the specific information we're seeking for the Cultural Impact Assessment. We have also enclosed four maps for your information and use. After reading through the information, we hope that you will contact us to schedule a time when our ethnographic researcher can meet with you to talk story and to record the information and insights you choose to share with us.

We want to assure you that if there is information that is sensitive in nature, our staff has different ways to handle the information to address your concerns.

We are sending this letter to twenty-five (25) other resource people identified in the region. We are hoping that everyone will participate so we can establish a rich, robust account of culture, traditions, historic sites, and mo'olelo—their interrelationships and their significance to place. With this established, we can more accurately assess cultural impacts that could result from the proposed project.

#### Information about 'Aina Archaeology

'Aina Archaeology (http://www.ainaarch.com/) is a native Hawaiian owned business that provides historic preservation assistance and consultation services that produce Archaeological Inventory Surveys, Cultural Impact Assessments, Traditional Cultural Property Studies, Archaeological Preservation Plans, Burial Treatment Plans, Data Recovery and Data Monitoring. We formed our practice to fulfill our kuleana to care for Hawai'i's cultural and natural resources. Our work is grounded in Hawaiian values. We take pride in our approach that provides more meaningful value for the client today, and a truer record of history for Hawai'i tomorrow.

#### Information about the Proposed Project

The Department of Hawaiian Home Lands convened a series of planning meetings with beneficiaries on the Maui Island Agricultural Wait List in order to develop a master plan for an agricultural homestead community in the ahupua'a of Honôkowai, Kā'anapali moku. The Honokôwai Agricultural Homestead Community Master Plan encompasses all 777 acres of DHHL lands at Honokôwai (see Map 1). The Master Plan is nearing completion. The primary focus of the master plan is the development of subsistence agricultural homestead lots ranging from hall-acre to 3-acres. Beneficiaries will be required to cultivate their lots. Home construction is optional; therefore, pre-qualification for a home loan is not required. The plan designates land for community-use. This may include an 'agriculture training center,' a processing facility and a farmer's market. Areas for community agricultural enterprises could also be included in the master plan. Land specifically designated for conservation

> D'alla 725 Kanifatani Bottiwardi, Sono CAUC Hannada, Haward WALL Mata CHOLInua Perkaway tauta 106, 1066, 1066, 10763 2000/10321020 w anawa Jantahukusani

Figure 4-1: Consultation and Outreach Letter Page: 1

Cultural Impact Assessment for the Department of Hawaiian Home Lands Honokowai Agricultural Homestead Community Master Plan.

buffers would be along the edges of all gulches and setback from Honoapi'ilani Highway. Community land use lots would be located on the makai portion of the parcel and may include: the agriculture training center/community center, mini-parks, churches, a charter school, and an adult and/or child day care center. Multi-family housing may include kupuna housing on the makai portion of the parcel. Lands would be set-aside for the development of roads, bike paths, and drainage-control measures. The amount of land allocated to each use and their specific locations are still being determined.

#### Information about the Cultural Impact Assessment

Since all DHHL land is considered 'state lands,' any development proposed on DHHL lands must comply with Chapter 343, Hawai'i Revised Statutes. Upon the completion of the Master Plan, an Environmental Assessment must be prepared. An Environmental Assessment identifies all potential impacts that could result from the proposed development and it identifies mitigation measures that would be used to lessen those impacts. Impacts are broadly defined to include cultural, socioeconomic, fiscal, and environmental impacts. The cultural impact assessment is one of many focused studies that would be included in the Environmental Assessment. 'Āina Archaeology was contracted to develop the Cultural Impact Assessment for DHHL's Honokōwai Master Plan.

For this cultural impact assessment, the ahupua'a of Honokowai is the focus of the study however, the study will also report on cultural resources or mo'olelo in Honokowai that are related to cultural resources in other ahupua'a within the Ka'anapali Moku (see the Ka'anapali Moku map).

We are seeking your kokua and guidance regarding the following aspects of the Cultural Impact Assessment:

- 1. General history, past and present land use within and adjacent to the project area.
- Knowledge of cultural resources which may be impacted within the proposed project area - for example, traditional plant gathering sites, traditional access trails, historic sites, archaeological sites, and burials.
- 3. Knowledge of traditional gathering practices in Honokowai- both past and ongoing.
- 4. Cultural associations of the Honokōwai Ahupua'a such as mo'olelo or connections to legendary accounts. For example, Kihawahine's association with Mo'o Muku
- 5. Referrals of other resource people who might be willing to share their cultural knowledge of the project area and surrounding ahupua'a.
- Any other cultural concerns the community might have related to traditional Hawaiian or other cultural practices within or in the vicinity of the proposed project area.

Cultural Impact Assessment for the Department of Hawalian Home Lands Honokowal Agricultural Homestead Community Master Plan.

We hope that you decide to participate in the Cultural Impact Assessment. If we do not hear from you by March 27, 2020 we will call you to schedule a time for an interview. Please send all correspondence to Kim-Hee Wong at kim-hee@ainaarch.com or by phone at 1-808-927-5815.

Me ka ha'aha'a,

The Work

Kim-Hee Wong Ethnographic Researcher

Table 6. Outreach Summary presents the community consultation effort conducted with *kama'āina*, Hawaiian cultural advisors and Hawaiian organizations. Consultation outreach was initiated via e-mail, which included a scoping letter containing the project description along with figures that showed the project location and project scope. If an e-mail was not obtained or was returned undelivered then a hard copy of the scoping letter and figures was sent to available physical addresses. Follow up telephone calls were then initiated when e-mail responses were not obtained. Individuals who expressed personal knowledge of the study area and gave their consent to share their *mana'o* for this study, are presented in subsequent sections.

# 4.2 COMMUNITY OUTREACH RESULTS AND INFORMAL INTERVIEWS

Scoping letters were sent to a total 20 individuals with diverse backgrounds. Contacts included representatives of Native Hawaiian organizations including, The Office of Hawaiian Affairs (OHA) and the State Historic Preservation Office. In addition, we reached out to representatives from the Aha Moku Councils. At least two attempts were made to contact each potential consultant. Some individuals were contacted but chose not to share information regarding the cultural practices and resources of Honokōwai.

### 4.2.1 Ekolu and Puanani Lindsey

Maui Cultural Lands (MCL) was established by Edwin "Ed" Lindsey Jr. and his wife Puanani Lindsey in 2002 as a non-profit organization aimed at stabilizing, protecting, and restoring Hawaiian cultural resources. Today Edwin "Ekolu" Lindsey, President of MCL, carries on his father's legacy and passion to maintain the cultural sites and resources of Honokōwai for future generations.

Mrs. Lindsey shared that her husband has been working in Honokōwai since 1999. At the time their goal was to remove the invasive plants, re-introduce native plants, and share the importance of saving/protecting our cultural sites. They have re-introduced a variety of native plants including *kalo*, *'a'ali'i*, *lama* trees, *pohinahina*, *pili*, *kulu'i*, *'ala'ala wai nui*, *'ulei*, *'āwikiwiki*, *'ili 'ē'ē*, *'awa*, *wili wili*, *'ohe*, *koa*, *'ala he'e*, *ulu*, *palapalai*, *laua'e*, *'olena*, *kou*, *noni*, *and lau kī*. Other non-native plants include: mountain apple, banana, lemon, lime, tangerine, figs and starfruit. Mrs. Lindsey shared that if the proposed project is developed, she hopes that residents will be encouraged to grow native plants in their lots, so that these plants may flourish for future generations.

Ekolu Lindsey shared his vision to see Honokōwai operate as an *ahupua'a* that provides agricultural and cultural resources for its people. One example he shared was to construct a *hale wa'a* (canoe house) that would house a *wa'a* (canoe) that the people of Lāhainā can use to learn about voyaging. He emphasized the fact that cultural practices include all aspects of nature from *mauka* (uplands) to *makai* (ocean). This includes growing traditional plants such as *wauke* that can be used to create *kapa* and planting *noni* trees that can be used for medicinal purposes. Other native plants in Honokōwai include '*akia*, '*a'ali'i*, *koa*, *wiliwili* and *lehua*. The *Lehua* was reintroduced to Honokōwai as a source of food for the native '*apapane* & '*i'iwi* birds. These birds exist in the area where the Kapaloa stream meets the Amalu stream and form the Honokōwai stream. Ekolu also shared that *pua'a* (pigs) are found in the forest.

In terms of the new proposed project, Ekolu noted that water and run off are the biggest issues. He expressed concern for the water that will be supplied to residents and wanted to learn more about where a proposed water well would be located, where that water will come from, and how much water will be drawn. Ekolu also questioned the ability of the water pump to support the proposed development, especially since there is a high demand for water, and rainfall within the area has decreased by 35% over the last five years. As an active community member, he recalled seeing a notice for public input on the water well. He is a consultant with Commission of Water

Resource Management (CWRM) in regard to establishing Interim Instream Flow Standards (IIFS) in Honokōwai stream. Ekolu is also concerned about the Honokohau Ditch line, noting that the line runs past different landowners, and asked how it will be maintained and by whom. To mitigate the effects of runoff, Ekolu suggests implementing some type of bio-remediation to prevent sediment transport via Honokōwai riparian corridor. Examples would include utilizing vetiver grass to prevent erosion, native ground cover to absorb run off, porous concrete/asphalt, curb cuts, rain gardens, and other remediation efforts that are outlined by the West Maui Ridge to Reef Initiative and also with Coral Reef Alliance. He requested that in this type of landscape planning, attention should be given to the effects of water runoff on the people living below in the *makai* section of Honokōwai.

# 4.2.2 Blossom Feteira

Blossom Feteira is a genealogical descendent of Honokōwai Ahupua'a. Her grandfather and great-grandfather were born in Honokōwai. As a child, Mrs. Feteira spent a lot of time there with her *'ohana*. She shared that her grandfather was a minister at Hale Na'au'ao church on the *makai* (seaside) side of Honokōwai and he would travel throughout West Maui, ministering to the people of the Kā'anapali Moku.

Prior to pineapple cultivation, Honkōwai was a fully functioninig, abundant *ahupua'a*. The DHHL property rests on land that was once used to cultivate *'uala* (sweet potato) and *mai'a* (banana). As such, Mrs. Feteira believes that it is only appropriate that this area be used for agricultural purposes. As a child she recalled going *mauka* (upland) to gather plants that could be used for medicinal purposes. This included *ko'oko'olau* (*Bidens* amplectans) and *'olena* (*Curcuma longa*), which could be made into tea that would cure various types of ailments. They also collected *pōpolo* (*Solanum americanum*), *uhaloa* (*Waltheria indica*) and *awapuhi* (*Zingiber zerumbet*). Mrs. Feteira recalled other plants in the area being: *'iliahi* (*Santalum freycinetianum*), *koa* (*Acacia koa*), *'ōhi'a* (*Metrosideros polymorpha*), *'ākala* (*Rubus hawaiensis*), *ukiuki* (*Dianella sandwicensis*), *hāpu'u* (*Cibotium glaucum*) and *pōhole* (*Diplazium esculentum*).

Mrs. Feteira shared that there was one *hala* tree in the *mauka* region of Honokōwai that produced white leaves. A *Kupuna Wahine* (elder woman) in Honokōwai used to *ulana* (weave) with these leaves. When she needed more *lau* (leaves), she would call Mrs. Feteira who would get them for her. The leaves had to be a particular size and length, and Mrs. Feteira was instructed to only take as many leaves as the *Kupuna* needed. Overtime, Mrs. Feteira noticed that the tree stopped blooming and the *Kupuna* knew that something was wrong. According to Mrs. Feteira, if the tree did not bloom then there were no seeds, which meant that the tree would not replenish itself.

Down in the valley were streams that fed beds of *lo'i kalo* (taro patches). Mrs. Feteira estimates that there were 20-25 *lo'i*. When the pineapple company began to cultivate the land, they put in their water system and started to divert water from the stream; therefore, *kalo* cultivation in that area stopped. When the water disappeared, so did the *muliwai* at the shorelines. Mrs. Feteira

shared that when she was a kid, the *kupuna* would "tell us about all these things- everything in the ecosystem at Honokōwai. But when they [the Pineapple companies] took the water, [there were] no more fish, *hihiwai*, *opae*, 'ō'opu, [everything] died when the stream died."

Trails allowed easy access from *mauka* to *makai* (seaward). One trail went to the *limu* beds and another led straight to the front of a channel where one could lay net to get fish. Mrs. Feteira said that remnants of these trails are still intact today, and serve as the alleys between condos and houses in the *makai* regions of Honokōwai. Mrs. Feteira recalled that some trails were wide, which allowed trees to be harvested in the uplands and hauled down to the shore where they would be carved into canoes. She explained that building a canoe was a skillfull process that not only allowed practices to be taught and shared, but it also was a testament to the strength and abundance of resources that a community had. *Olona* was gathered and used to make cordage, while *lau* were gathered from the *Hala* trees to make mats and sails. Everyone had a part to play in the building of the canoe.

Along the shoreline, Mrs. Feteira recalls that the area was rich in resources. As a kid, she would go to the *limu* beds and gather a variety of *limu*: *manuea, kohu, wawa'ole, lipoa*. Certain types of *limu* could only be gathered during certain periods of the year. This same practice was applied to fish, whereby only certain types of fish could be gathered during a particular season. Even with a *kapu* (restriction) on fish species, Mrs. Feteira shared that it was no problem catching 20-30 pounds of fish on any given day. This was due to the abundant reef system that was composed of four reefs and subsequent channels– each of which was recognized for spawning a certain species of fish. Channel 1 had *weke, manini, kole, oama*. Channel 2 were bigger fish like *palani, kala*, older *weke*. Channel 3 was *kala* and mullet and Channel 4 were deep sea fish like *kawakawa, akule, halalu*. Along the rocks, Mrs. Feteira shared that there was no *wana* or *opihi* and hardly any *he'e* (octopus); however, she did recall gathering the red *'okala* (sea anemone) that could be eaten and was known as a medicinal aid for individuals who had anemia. Along the shoreline, there were various plants: *hau, kou, naupaka* and *niu*. It was from the *niu* trees in Honokōwai where she learned to make *'aho* (lashing).

Mrs. Feteira and her family would heed the call from the kupuna and they would go to Honokōwai to fish. They would swim out with their nets, catch fish, and bring it to shore. Mrs. Feteira explained that everytime they fished, they would go *ho'okupu* (give offering), and take fish as *makana* (gift) to the kupuna that lived right across from the beach park. These *kupuna* would advise them on what to do the next time. For instance, if a certain species was too small, the *kupuna* would tell them to *kapu* the fish species or the place so that the fish could grow. Once a year, the *kupuna* would call them to help with the *hukilau* and fish would be caught for the whole community. Overtime the *kupuna* knew that something was wrong with the water and the fish, and so the call to fish became less frequent until it eventually stopped.

# 4.2.3 Leonard "Junya" Nakoa

Leonard "Junya" Nakoa is an active Lāhainā community member whose family comes from Kahana. Currently Mr. Nakoa lives in Napili and shared that although he is in a different *ahupua'a*, the people of Kā'anapali *moku* take care of one another as if they are all one *'ohana*.

In terms of cultural practices, Mr. Nakoa shared that the people of this area take care of their "ice box," a local term that is used to describe the bountiful ocean resources. According to Mr. Nakoa this "ice box" is filled with fish such as *akule (Selar crumenophthalmus), moi (Polydactylus sexfilis), pāpio (Caranx ignobilis), manini (Acanthurus triostegus),* and *kole (Ctenochaetus strigosus)*. Other ocean resources such as 'opihi (limpets), black crab, and *he'e* (octopus) can also be found along the coastline. When they fish or gather resources they practice cultural resource management and do not take more than they need and when able, they share with others. This same belief is practiced by those who hunt *pua'a* (pigs) in the mountains. For this reason, Mr. Nakoa believes that when the proposed project is being developed, there is no need for a large grocery store— the people will get the resources they need from the the land, mountain, and sea. They will raise their own livestock and poultry. 'Ohana that cultivate *kalo* (taro) will trade with those in the uplands and down by the sea; therefore, 'ohana will take support each other.

When asked about traditional cultural places, Mr. Nakoa shared that he knows of one *heiau* in the region. As a former employee of Kapalua Land Company, Mr. Nakoa has seen five archaeological sites on the land; however, he did not disclose their exact locations.

Mr. Nakoa shared that he has been on the Department of Hawaiian Home Lands Wait List for over 20 years and is eagerly awaiting the development of the proposed project. According to Mr. Nakoa, the proposed project is very much needed for the people of Kā'anapali and Lāhainā. He believes that it will be an excellent example to show the ingenuity, resourcefulness, and ability of native Hawaiians to live off the land– just as their ancestors did via the *ahupua'a* system. Throughout our conversation he repeatedly mentioned that he wants to be back on the land.

If the project continues forward, Mr. Nakoa reccommends building a community facility to process foods. He noted that there is a processing center in Makawao that services the people on that side; however, if DHHL were to build one in Honokōwai it would be so beneficial for the people of West Maui. Mr. Nakoa envisions this to be a mixed facility where fish, meats, vegetables, and fruits could be processed, cleaned and then sold to the people. If this were to happen, he truly believes that Honkōwai would be a model *ahupua'a* for others to follow.

# 4.2.4 Kaimaile Makekau

Kaimaile Makekau is a genealogical descendent of Honokōwai. She shared that Pu'u Kukui is the wettest spot in the world and that the project will dramatically affect the health and ecology of the Honokōwai rainforest. Ms. Makekau believes that her property is located directly *mauka* of the DHHL project area in Honokōwai. Following an introductory phone call, Ms. Makekau emailed her written testimony in regards to traditional cultural practices and lend tenure. This testimony

is reflective of Ms. Makekau's personal beliefs. As requested by Ms. Makekau, her written testimony is included below as-is.

My name is Kaimaile MAKEKAU. I'm the owner of the land above the land where the apparent homestead is supposed to be.

*My concerns of the homestead is:* 

1. The land they are trying to place on this homesteads on are owned by lineal descendants of a LCA made before the rezone of DHHL land which I have paperwork and the names of those descendants.

2. Moʻomukuhui is not DHHL land.

*3. If state decides to place DHHL on those lands what compensation does those lineal descendants get.* 

4. Why are all those plans for DHHL planning the Hawaiians next to the sewage plant?? Literally right next to the sewage plant. It's completely inhumane and unsanitary for those Hawaiians to be placed in an area that is so stink.

5. The smell of sewage is horrible but it is the gases coming from the sewage plant that doesn't have a smell that is harmful to a humans health. Why for the state not address these health concerns for our people.

6. The easement that goes up to my property is right smack in the middle of these homestead plans how does this affect my entry.?

7. DHHL is encroaching on my easement of which I own I did not give them permission to utilize my easement. I have letters notarized by attorneys of my ownership of these easements.

8. I am being infringed upon and so are other Hawaiian families as Royal Hawaiian descendants on a land that we have won in U.S. civil court.

9. Our entry into Honokawai valley which I own land in is going to be blocked because there is only one entrance and that entrance is at the bottom near the dhhl homestead.

10. Honokawai valley had my families grave sites and ancient lo'i rock formations that should be protected as historic sites. I have taken pictures of all graves and historic areas.

11. There are more native Hawaiian PUEO on this land then anywhere in West side. At night there are 1000s of Pueo who are resided in this land.. There are laws to protect our Amakua the Pueo.

12. I am a Alii aimoku o ka Mo'o Muku Hui.. my Palapala of the land of all of the land above and below has never had DHHL on this land.. how does descendants a United States state agency have any authorization to go upon Hawaiian Crown land.

13. The Hawaiians been waiting for a very long time to actually get what is there birth right to have. waiting for 100 years and now they are going to zone our Hawaiians next to the stinkest most disgusting place on the island??? What's kind of sick evil bastards came up with this plan?? Such a shame that they cannot share the same views that is LITERALLY plain as day.

#### 4.2.5 Foster Ampong

Foster Ampong is a descendent of Honokōwai Ahupua'a, Kā'anapali Moku. Mr. Ampong declined to comment about the DHHL Honokōwai project and provided the following summary of our conversation.

Foster Ampong is a Descendent of his ancestors who were born, lived, and buried in the Honokōwai Ahupua'a, Ka'ānapali Moku. He was born in Wailuku, and rasied in Lāhainā. His 'ohana extends throughout, but is not limited to, Maui, Lāna'i and Moloka'i.

Honokōwai is a very special *ahupua'a* for Mr. Ampong and his *'ohana*. He shared that his grandparents (mother's parents), the eldest sister of his mother, a great-grand aunt and greatgrand uncle were originally buried at Pu'u Keka'a in <u>Honokōwai Ahupua'a *ma kai*</u>. In the 1960s Amfac built the Sheraton Maui at Pu'u Keka'a and dug out Mr. Ampong's Ohana and numerous *other iwi kupuna* to <u>accommodate Tourism</u>.

Mr. Ampong witnessed the anugish his mother and her sisters lived through for the remainder of their lives. They were forced to deal with the removal and reburial of their loved ones to Wailuku and Hamakuapoko Moku. This experience is why Mr. Ampong is <u>adamant</u> about the "process" of dealing with disturbed burials to avoid further injury.

Mr. Ampong shared he received a call from a representative of the Council for Native Hawaiian Advancement on June 1, 2020 and was told the following:

- 1. The Department of Hawalian Homes Lands was involved with the Project at Honokowai
- 2. The representative expressed that the Chair of the Department of Hawaiian Homes Lands (DHHL) wanted to confirm if Mr. Ampong is against the re-internment of iwi kupuna at the DHHL Honokōwai project site, which were dug out from the Lāhainā Wastewater Reclamation Facility project site. The representative then added that 100 acres of the DHHL Honokōwai project site would be set aside for a non-profit group if Mr. Ampong consented.

Mr. Ampong refused the inappropriate offer. The reburial of iwi kupuna should not be exploited to benefit the nonprofit organization working with the Department of Hawaiian Home Lands.

Mr. Ampong also stated on July 14, 2020 he was contacted by the Department of Hawaiian Home Lands, Maui Office and informed that 'Āina Archaeology was trying to reach him to conduct a Cultural Impact Assessment interview. After contacting the Maui Office, Mr. Ampong was connected to 'Āina Archaeology via a telephone conference between himself, Aina Archaeology and the DHHL Maui Office. Mr. Ampong was confused as to why the Maui Office remained on the call that should have been a private conversation between Aina Archeology and Mr. Ampong.

Mr. Ampong raised concerns that information he discloses during the CIA process will be used to exploit *iwi kupuga* therefore he declined further comment.

2020 Foster Ampong Date

Figure 4-4: Community Outreach Summary by Foster Ampong

## 4.2.6 Mona Kapaku

Mona Kapaku is a longtime resident of Maui. Through email correspondence, Ms. Kapaku shared her relation to the west side of Maui. Ms. Kapaku recalled that her Aunt Sally Wong- her father's sister- fought for their family's Kuleana lands in Honokeana. These lands originally belonged to Ms. Kapaku's grandmother's family, the Kaaukea 'Ohana. At the time, Maui Land and Pineapple (MLP) was interested in clearing title to land in Kā'anapali, in a valley called Honokeana. The family was given public notice of the land via a Notice of Action to Quiet Title to Real Property. Ms. Kapaku recalled that her aunty and other relatives was surprised that their names was listed in the newspaper. Prior to 1982, public notices only the Hawaii Hochi, a Japanese language newspaper. Her Aunty recalled that as far back as 1880, large corporations like MLP used large acregares of land for agricultural purposes. The corporations may have previously made agreements with an ancestor of Hawaiian families; however, when the lease agreement ran out, the lease was never surrender back to the families nor were the families informed of the expiration. So when a corporation wants to sell or lease the land to a third party, they could not do so without a clear title. By the time the land owner is identified or comes forth, the corporation will try to partition the owner, claiming that they (the corporation) has occupied the land for a certain number of years and that after paying the taxes for that period, they have the right of ownership.

In the case of Ms. Kapaku's family, MLP claimed they had used the land more than 60 years for pineapple cultivation. To her family's benefit, their 'ohana had spent many years compiling an extensive genealogy for the family. The help of the Office of Hawaiian Affairs (OHA)– which had just been established a few years before–provided the 'ohana with an attorney who represented the family in court. Keoni Agard JD. was the attorney assigned by OHA to the case. Ms. Kapaku shared that the task of searching our documents to substantiate blood ties to ancestors for three to four generation for was very time consuming and involved visiting the archives, Board of Health and the Bureau of Conveyances. Ms. Kapaku's aunt shared the search had to be an intelligent not kapakahi (skimming thru). In the end, a total of 18 Kuleana parcels were identified. Her aunt filed claim for 2 parcels out of the 18. Two and half years after the legal notice appeared, Ms. Kapaku's family won the case against MLP. She shared that in time the other families won as well. When the two parcels were divided amongst their 21 relatives, everyone ended up with 12,000 sq. ft. each. Ms. Kapaku shared that some relatives built on their while others did not; regardless, everyone was granted a clear title.

In relation to Honokōwai, Ms. Kapaku shared information about her friend Herbie Watson III, who spent time there as a child. Herbie's grandmother, Elizabeth Paki was fondly referred to as "Big Grandma" and she was married to Hipolito Perez. Together Elizabeth and Hipolito had a child who was Herbie's mother, Caroline Perez and she married Herbert Watson Jr. who was Herbie's father.

Ms. Kapaku shared that Elizabeth and her siblings– her sister Pilahi and her brother Samuel– were raised in Honokōwai. Often times Herbie and his siblings spent the weekends and summers in

Honkowai. According to Ms. Kapaku, the Watsons lived in Kihei, but when they went to Honokōwai they would call Big Grandma and let her know what time they would arrive in Honokōwai. Big Grandma would then get the limu lipoa, opelu and poi prepared. Ms. Kapaku recalled a convesation she had with Herbie's sister, Sylvia, about her childhood times of Honokōwai. Sylvia remembered that Big Grandma's sister, Pilahi Paki, sold some of the family land in Honokōwai. She also shared that the priest from Maria Lanakila Church in Lāhainā would bring an extra horse for Big Grandma to ride as she assisted the priest with family visitations from Honokōwai to Honolua.

# 5.0 TRADITIONAL CULTURAL PRACTICES

The arrangement of a typical Hawaiian *ahupua'a* extended from several fathoms out from the coastline to the upland forested areas. Depending on the location within this broad *makai* to *mauka* context, and guided by knowledge of the natural environment, a wide variety of cultural practices and resources within the *ahupua'a* could be found. Such resources and rights would include marine resources and fishing rights in the coastal area, arable lands for crop cultivation, as well as water rights in the planting zones, and valuable bird catching along with plant and timber harvesting privileges at the higher elevations and toward the valley headwater (Handy et al. 1991:48). Based on the land commission award distribution in Honokōwai, in addition to the stories and information gathered during the background research and consultation completed for this study, it is apparent that settlement and land use within Honkōwai *Ahupua'a* functioned in the typical traditional sense. Discussions on specific aspects of traditional Hawaiian cultural resources and practices, as identified through background research and community consultation, that may relate to the current study area, are presented below.

# 5.1 MAUKA RESOURCES

Based on the testimony for *kuleana* claims during the Great Māhele and previous archaeological reports, it is apparent that traditional Hawaiian agricultural practices occurred within Honokōwai. According to testimonies, by the mid-19<sup>th</sup> Century, a significant portion of land in Honokōwai was used for irrigated taro cultivation (see Table 2). Land used for *kalo* was located at an elevation of 1200-1250 feet above the valley floor (Donham 1994:4-5). Other traditional resources noted in land claims and testimonies included wet *lo'i kalo* (wetland taro patch), dry *lo'i kalo* (dryland taro patch), *'uala* (*Ipomea batatas*), *mai'a* (*Musa sapientum*), *kō* (sugar cane), *'olonā* (*Touchardia latifolia*), *kukui* (*Aleurites moluccanus*), wauke (*Broussonetia papyrifera*), *wiliwili* (*Erythrina sandwicensis*) and *lauhala* (*Pandanus species*).

Lauhala, the leaves of the hala (Pandanus species), were used in a variety of ways. This included household items (i.e. cordage mats, baskets, and sleeping pillows) (Abbott 1992:63, 71-74), personal adornments (i.e. paint brushes for kapa and lei making) (Abbott 1992:54-55, 128), thatch roofing material (Abbott 1992:69); and ailments for medicinal and minor dietary needs (Abbott 1992:43, 99). LCA 5002 to Kahanaumaikai identified an area within Honokōwai that was specifically used to grow lauhala (see Figure 3-3: A Native Register claim by Kahanaumaikai for Land Commission Award 5002, highlighting Apana 1 as a land used for cultivating *lo'i*, potato, *wauke*, *kukui* and *lauhala* [Native Register, Reel 4, Volume 6, Image 00020, (Office of Hawaiian Affairs 2011)]). Additionally, Blossom Feteira shared her personal experiences of gathering *lauhala* in Honokōwai; further supporting the presence of the *hala* trees within Honokōwai.

The wood of *'ōhi'a lehua* (Metrosideros polymorpha) was used for house building; construction of decking, spreaders, seats, and gunwales for canoes; *'umeke lā'au* (wooden calabashes); carved *ki'i* (sacred images); and as *hālau hula* altar plants to the god Kūkā'ōhi'a Laka (Abbott 1992:68,

81, 87, 117, 114). The flowers would also be used in lei making (Abbott 1992:127). Like 'ōhi'a *lehua*, the wood of mature 'a'ali'i (Dodonaea viscosa) was used for posts in *hale* (house) framework (Abbott 1992:68) while the seed pods and leaves continue to be gathered for *lei po'o* or foliage woven around a base to worn around the *po'o* (head).

The bark of the 'olonā (Touchardia latifolia) is most valued for making cordage due to its durability and strength, a characteristic that was appreciated and sought after by the first Western voyagers to Hawai'i (Abbott 1992:61). 'Olonā was the cordage of choice for lei, fine meshed nets for feather work,  $k\bar{o}k\bar{o}$  pu'upu'u (carrying net) for 'umeke (gourd container) which belonged only to the *ali'i*, and the finest fishnets (Abbott 1992:61, 83, 92, 105, 124). With regard to fishnets, and according to Abbott, the time-consuming manufacture and mending of fishnets once fell to the growers of the plant and sometimes to other upland men, but never the fishermen themselves (Abbott 1992:83). Exchange of 'olonā cordage or finished nets for supplies of fish was a central feature of the flow of materials between the uplands and coast, a social pattern that made *ahupua'a* life run smoothly.

In 1999 Mrs.Lindsey's husband began reforestation work in Honokōwai. This involved removing invasive plants and re-introducing native species to the landscape. Since then, they have re-introduced a variety of native plants including *kalo*, 'a'ali'i (Dodonaea viscosa), lama (Diospyros sandwicensis), pohinahina (Vitex rotundifolia), pili (Heteropogon contortus), kulu'i (Amaranthus brownii), 'ala'ala wai nui (Plectranthus parviflorus), 'ulei (Osteomeles anthyllidifolia), 'āwikiwiki (Canvalia pubescens), 'awa (Cyperus javanicus), wili wili (Erythrina sandwicensis), 'ohe (Polyscias sandwicensis), koa (Acacia koa), 'alahe'e (Psydrax odorata), 'ulu (Artocarpus altilis), palapalai (Microlepia strigosa), laua'e (Microsorium scolopendria), 'olena (Curcuma domestica), kou (Cordia subcordata), noni (Morinda citrifolia), and kī (Cordyline fruticosa).

The names of geographical features or *'ili* may refer to the the presence of a specific  $l\bar{a}'au$  (plant) within Honokōwai. *Papa'ōlena* is the name of an *'ili* associated with L.C.A. 3192 to Hainu, L.C.A. 4742 to Makuahine and L.C.A. 6476 to Keliikuli. The name of this *'ili* may refer to a *papa* (plain) of *'ōlena* (Tumeric) that could have populated the area. In a similar fashion, *Pu'u Lena* translates to "yellow hill" and is the name of an *'ili* that is recorded in 12 different L.C.A (see Table 1). The name may have described the physical characteristics of the hill, and could allude that the hill was once populated by a tree that was filled with yellow flowers such as a *lehua mamo*. *'Ōhi'a* is noted as an *'ili* name in a testimony provided for L.C.A 6460 to Kaihe, L.C.A. 6601 to Piimoku, L.C.A. 6722 to Pa and L.C.A. 6722B to Mai (see Table 1). This *'ili* may refer to the *'ōhi'a* tree that could have flourished in the uplands of Honokōwai. *Pu'u Kukui* is the name of the highest point on *Mauna Kahalawai* (West Maui Mountains) and translates to candlenut hill. This location may refer to the *kukui* tree (*Aleurites moluccanus*) that could have once covered this section of the mountain. Place names may also refer to a practice that occured in the area. For instance, *Ha'enanui* is an *'ili* recorded in L.C.A. 76 to William Shaw and is noted to be the name of a farm given to Shaw by Hoapilii Wahine (see Table 1).

# 5.2 MAKAI RESOURCES

Use of the shoreline resources and preference for residency along the coastline from a time period prior to Western contact to the present is evident in *mo'olelo*; the findings of archaeological studies (Griffien et al. 1976; Barrera 1989), and the continuation of fishing traditions practiced by community members (see 4.2.2).

In accordance with traditional aquaculture practices, the people of Honokōwai engaged in natural resource management and took only what they needed. According to the *mo'olelo*, two fishermen at Kahana Beach practiced a fishing technique known as *lauahi* (see 3.1.3.1). When practiced successfully, a fisherman would be rewarded with several sacks of fish, which would be shared amongst all who helped. This practice of sharing and taking only what one needs was confirmed by Mr. Nakoa. During his interview, he explained that his *kupuna* taught him to only take what he needs so that there will be enough for others. This same cultural practice was shared by Mrs. Feteria who explained that there were so many fish, one could easily catch 20-30 pounds; however, the fishermen knew that they were only supposed to take enough to feed their *'ohana* (family) and friends.

Successful management of the shoreline and its resources resulted in an abundant aquatic system. Mr. Nakoa shared that the people of this area referred to the ocean as an "ice box," a local term that is used to describe the bountiful ocean resources. According to Mr. Nakoa, this "ice box" is filled with fish such as *akule (Selar crumenophthalmus), moi (Polydactylus sexfilis), pāpio (Caranx ignobilis), manini (Acanthurus triostegus),* and *kole (Ctenochaetus strigosus)*. Other ocean resources such as *'opihi* (limpets), black crab and *he'e* (octopus) can also be found along the coastline. Mrs. Feteira shared that there were four channels and reefs within Honokōwai. Each channel was known for a specific group of fish. Overall the following fish could be in found in the waters of Honokōwai: *weke (Mulloides flavolineatus), oama* (juvenile *weke), palani (Acanthurus dussumieri), kala (Naso unicornis), kawakawa (Euthynnus affinis)* and *halalū* (juvenile *akule*). In addition, Mrs. Feteira shared that Honokōwai once had abundant beds of *limu* (seaweed; algea). This includes the following varities: *manuea (Gracilaria coronopifolia) , kohu (Asparagopsis taxiformix), waewae'iole (Codium edule), lipoa (Dictyopteris plagiogramma).* 

In addition to harvesting marine resources, references to traditional *loko i'a* (Hawaiian fishponds), or enclosed bodies of water often located at or near the *muliwai* of a stream, at Kahana and near the boundary of Māhinahina and Honokōwai were noted in the literature. The invention of fishponds in Hawai'i is said to have occurred around the 13<sup>th</sup> or 14<sup>th</sup> century, an innovation in aquaculture that may be unique to pre-contact Hawai'i (Kikuchi 1973; Summers 1964) and allowed Hawaiian subsistence practices to move beyond fish harvesting to fish production and husbandry (National Oceanic Atmospheric Administration 1997). Local Lāhainā historian Inez Ashdown (in Orr 2005:46) records the presence of a fishpond at the mouth of Honokōwai Valley near the boundary of Māhinahina. Integral to maintaining the health and productivity of the fishpond was the supply of nutrients that would be brought in by the stream flow.

# 5.3 TRADITIONAL HAWAIIAN SITES

According to previous archaeological studies and recent community outreach interviews, there are remnants of traditional cultural sites within Honokōwai. The Statewide Inventory of Historic Places for the Island of Maui (SIHP) lists sites 1207 and 1208 to respectivly contain petroglyphs and an outline of a house (Hommon and Connolly 1973; Orr 2005). In 1976, an Archaeological Survey and Salvage Excavation located five sites, and after additional testing it was revealed that the sites were occupied in 1000 A.D. to 1778 A.D. One year later, an Archaeology Inventory Survey in Honokōwai Valley revealed additional evidence of early historic occupation as seen by the remains of habitation platforms, retaining walls, diversion dams, water channels, and a possible agricultural shrine (Davis 1977). A 1998, Reconnaissance level survey identified a habitation terrace at Honokōwai Stream (Barrera 1989). In a recent community outreach interview, Mr. Nakoa shared that he has seen five archaeological sites within the project area and that he is aware of one *heiau*.

# 6.0 ANALYSIS AND RECOMMENDATIONS

The State of Hawai'i has a constitutional and statutory obligation to protect native Hawaiian customary and traditional gathering rights. We offer this introductory section to explain the basis and substance of the state's obligations, as well as the impact of this protection upon traditional western private property rights, and the role of private landowners in the necessary research and analysis of traditional and customary practices. To provide the appropriate historical context for such traditional and customary practices, an authoritative treatise on this subject state:

At the time of Western contact in 1778, Native Hawaiians "lived in a highly organized, self-sufficient, subsistent social system based on communal land tenure with a sophisticated language, culture, and religion." Access from one area to anotheralong the shore, between adjacent ahupua'a (land divisions [usually extending from the mountains to the sea along rational lines, such as ridges or other natural characteristics]), to the mountains and the sea, and to small plots of land cultivated or harvested by native tenants—was a necessary part of early Hawaiian life. Gathering activities supplemented everyday food and medicinal supplies, while cultural and religious practices sustained the people in a variety of ways. Prior to 1839, ancient Hawaiian custom and usage governed the islands. To ensure the political existence of the kingdom in the face of expanding foreign influence, Kamehameha III developed a system of codified laws that incorporated protections for ancient tradition, custom, and usage. In other words, the laws in force at the time of the Māhele in the mid-1800s and for some time thereafter recognized the importance of traditional and customary practices to the native people. Many of these laws survived later political transformations and continue to apply as background principles of private property law in the State of Hawai'i. (MacKenzie et al. 2015:1082)

With respect to "laws [that] survived later political transformations," the present-day obligation of the State to protect native Hawaiian traditional and customary practices is based, first, upon the State Constitution and, in addition, upon the legislature's acts as codified in the Hawai'i Revised Statutes and the judiciary's interpretation of the state constitution and state statutes through case law. These authoritative sources of law, in essence, describe how the state seeks to integrate and protect native Hawaiian traditional and customary practices in a western system of private property ownership

Article XII, section 7 of the Hawai'i Constitution provides:

The State reaffirms and shall protect all rights, customarily and traditionally exercised for subsistence, cultural and religious purposes and possessed by ahupua'a tenants who are descendants of native Hawaiians who inhabited the Hawaiian Islands prior to 1778, subject to the right of the State to regulate such rights. Delegates to the 1978 Hawai'i Constitutional Convention explained:

The proposed new section reaffirms all rights customarily and traditionally held by ancient Hawaiians. . . . [B]esides fishing rights, other rights for sustenance, cultural and religious purposes exist. Hunting, gathering, access and water rights, while not provided for in the State Constitution, were nevertheless an integral part of the ancient Hawaiian civilization and are retained by its descendants." Hawaiian Affairs Comm., Standing Comm. Rep. No. 57, reprinted in 1 Proceedings of the Constitutional Convention of Hawai'i of 1978, at 637, 640 (1980)

With respect to legislative acts, Section 7-1 of the HRS specifically protects the right to gather, although that right is limited in scope to the enumerated items that are primarily used for constructing a house or starting a fire. Section 1-1 of the HRS offers broader protection for the exercise of traditional and customary rights. By codifying "Hawaiian usage" as an exception to the common law of the state, this statutory provision provides "a vehicle for the continued existence of those customary rights which continued to be practiced" after November 25, 1892. *Kalipi v. Hawaiian Trust Co.*, 66 Haw. 1, 10, 656 P.2d 745, 750–51 (1982).

In a series of landmark cases beginning with *Kalipi*, the Hawai'i Supreme Court reaffirmed the customary and traditional gathering rights of *ahupua'a* tenants, particularly under article XII, section 7 of the Hawai'i Constitution *See Kalipi*, 66 Haw. at 10–12, 656 P.2d at 750–52; *Pele Defense Fund v. Paty*, 73 Haw. 578, 837 P.2d 1247 (1992), *cert. denied*, 507 U.S. 918 (1993); *Public Access Shoreline Haw. v. Haw. Cnty. Planning Comm'n*, 79 Hawai'i 425, 903 P.2d 1246 (1995), cert. denied, 517 U.S. 1163 (1996) (commonly known as "*PASH*"); *Ka Pa'akai O Ka 'Āina v. Land Use Com'n, State of Hawai'i*, 94 Hawai'i 31, 7P.3d 1068 (2000). Through these line of cases, the Supreme Court established the manner in which state agencies must apply constitutional protections of native Hawaiian gathering rights in the development of private real property.

In *Kalipi*, the Hawai'i Supreme Court ruled that "any argument for the extinguishing of traditional rights based simply upon the possible inconsistency of purported native rights with our modern system of land tenure must fail." *Kalipi*, 66 Haw. at 4, 656 P.2d at 748. *In Pele Defense Fund v. Paty*, the Court held that "native Hawaiian rights protected by article XII, section 7 may extend beyond the *ahupua'a* in which a native Hawaiian resides where such rights have been customarily and traditionally exercised in this manner." *Pele Defense Fund v. Paty*, 73 Haw. at 620, 837 P.2d 1272. In the PASH case, the Court stated that "legitimate customary and traditional practices must be protected to the extent feasible in accordance with article XII, section 7." *PASH*, 79 Hawai'i at 451, 903 P.2d at 1272

The Court in PASH stated that the "State retains the ability to reconcile competing interests under article XII, section 7". *PASH*, 79 Hawai'i at 447, 903 P.2d at 1268. As part of this balance of interests, the Court stated: (a) "[although access is only guaranteed in connection with undeveloped lands, and article XII, section 7 does not require the preservation of such lands, the State does not have the unfettered discretion to regulate the rights of *ahupua'a* tenants out of existence", *id.* at 451, 903 P.2d at 1272, and (b) "the balance of interests and harms clearly favors a right of exclusion for private property owners as against persons pursuing non-traditional practices or exercising otherwise valid customary rights in an unreasonable manner", although, "[o]n the other hand, the reasonable

exercise of ancient Hawaiian usage is entitled to protection under article XII, section 7", *id.* at 442, 903 P.2d at 1272.

*In Ka Pa'akai O Ka 'Āina*, the Supreme Court provided further direction on the constitutional and statutory responsibility of state agencies to preserve and protect the rights of native Hawaiians to carry-out their traditional and customary practices to the extent feasible and, in so doing, "the Court introduced an analytical framework that governmental agencies must specifically consider when balancing their obligations to protect traditional and customary practices against private property (as well as competing public) interests." (MacKenzie et al. 2015:1109).

In *Ka Pa'akai O Ka 'Āina*, 94 Haw. at 35, 7 P.3d at 1072, the Court held that the State Land Use Commission (LUC) failed to satisfy its constitutional and statutory obligations to preserve and protect customary and traditional rights of native Hawaiians (Belatti 2003). At issue was the LUC's grant of a petition to reclassify over 1,000 acres of land in the *ahupua'a* of Ka'upulehu on Hawai'i Island from the State Land Use "Conservation District" to the State Land Use "Urban District" in order to allow the development of a new resort. The Court acknowledged a variety of traditional and customary rights asserted by the petitioners, who were comprised of a coalition of Native Hawaiian community organizations. These rights included "fishing [and] gathering salt, *'opihi, limu, kūpe'e* (edible marine snails whose shells are used for ornaments; the rare ones by chiefs), Pele's Tears (tear drops made from pahoehoe lava), and *hā'uke'uke* (edible sea urchins)." *Ka Pa'akai O Ka 'Āina*, 94 Haw. at 43 and nn.19-21, 7 P.3d at 1080 and nn. 19-21. The Court also recognized the "special religious significance" of an 1800-1801 lava flow to gather salt for subsistence and religious purposes. *Id*.

The petitioners further asserted that "the petition area is associated with important personages and events in Hawaiian history, contains well-known physical entities (such as the shoreline, Ka Lae Mano and the 1800-1801 lava flow) and remnants of the native tenants' lateral shoreline and *mauka-makai* trail system, living areas and burials." *Id.* at 43, 7 P.3d at 1080. Agreeing with the petitioners that their interests as native Hawaiians and as tenants of the *ahupua'a* of Ka'upulehu would be impaired by the proposed development in relation to the use of ancient trails and the shoreline area to practice traditional and customary gathering rights, the Court held the LUC had failed to develop a proper record on such rights and consider and analyze the extent of native Hawaiian practitioners' exercise of traditional and customary rights in the affected area. The Court stated that the LUC, as the reviewing state agency, must consider and make express findings of fact and conclusions of law regarding the cultural, historical, and natural resources of a subject property as they relate to native Hawaiian rights when determining what restrictions should be placed on land use. *Ka Pa'akai O Ka 'Aina*, 94 Haw. at 35, 7 P.3d at 1072.

The Court further held that the LUC, by directing the developer to work independently to protect cultural rights, impermissibly delegated the LUC's constitutional and statutory responsibility, as a State agency, to protect and preserve cultural resources and native Hawaiian rights. The Court vacated the LUC's grant of the developer's application for a land use boundary reclassification and remanded the case to the LUC to make findings of fact and conclusions of law relating to:

(1) the identity and scope of "valued cultural, historical, or natural resources" in the petition area, including the extent to which traditional and customary native Hawaiian rights are exercised in the petition area;

(2) the extent to which those resources - including traditional and customary native Hawaiian rights - will be affected or impaired by the proposed action; and,
(3) the feasible action, if any, to be taken by the LUC to reasonably protect native Hawaiian rights if they are found to exist. Ka Pa'akai O Ka 'Āina, 94 Haw. at 35, 7 P.3d at 1072.

The Court's framework seeks "to effectuate the State's obligation to protect native Hawaiian customary and traditional practices while reasonably accommodating competing private [property] interests" (*Id.* at 46-47, 7 P.3d at 1083-84). Beyond the directives to the LUC in this specific case, this three-part framework provides specific direction to state and county agencies when considering land use and development projects on previously undeveloped land and should provide guidance to developers with respect to the record that must be prepared for a discretionary land use authorization or permit.

In attempting to comply with the *PASH* and *Ka Pa'akai O Ka 'Āina* cases, the LUC had to address the issue of who has the responsibility to identify (and place on the record) any pre-existing native Hawaiian gathering rights. In subsequent boundary amendment proceedings, the LUC directed the petitioner to consult with the Office of Hawaiian Affairs (OHA) and with *kūpuna* in the area regarding past and present practices. The Office of Planning (OP) also consults with OHA. The LUC does not do any independent investigation, rather they rely on the record made by the petitioner and OP (and any intervenor) and determine whether that record is sufficient.

Once the rights have been identified and the impacts assessed, the LUC is faced with the difficult problem of reconciling the private property rights, particularly the right of exclusion, with the gathering rights of native Hawaiians, which of themselves can require a certain amount of privacy and seclusion. Following the Supreme Court's remand in *Ka Pa'akai O Ka 'Āina* and in another case, *In the Matter of the Petition of Destination Villages Kauai*, Docket No. A00731 (2001), native Hawaiian gathering rights were shown to exist. The LUC put conditions on its approval of reclassification of property, and each case was required the formation of a committee made up of a developer's representative and a representative from the local native Hawaiian community to develop a plan to ensure that the gathering rights are protected. The plans are subject to LUC approval; any controversy arising from the plan is to be resolved by the committee. In the event the committee members cannot agree, they must agree on a third person who then will break the tie.

The LUC chose the committee approach because it did not believe it had sufficient information on resource conservation and management for the area in either of the two cases to make the final decision and, as a practical matter, would not be able to create such a record within the statutorily-mandated (365-day) time frame for making a decision. Because the Supreme Court has forbidden the LUC to delegate its decision-making power over balancing the private property rights and native Hawaiian gathering rights, forming a committee with each party having an equal vote in the outcome and requiring that any plans be approved by the LUC ensured that both sides would have their

interests adequately represented and that the LUC would be the final arbiter that the balance reached meets the requirements of the law.

For purposes of the present project, the following sections provide an analysis of potential effects to currently known traditional and customary practices within and adjacent to the proposed project footprint. Recommendations for managing potential impacts to on-going practices or protecting the integrity of traditional cultural resources – that may be present within and adjacent to the project area – should honor traditional cultural practices that were once carried out in the area be re-established.

# 6.1 POTENTIAL DIRECT EFFECTS OF THE PROJECT

Ekolu Lindsey noted that one of the biggest issues facing this project is related to water. First, he questions the origin of the water that will be supplied for residents use. A primary concern with this is regarding the feasibility of the pump to support the development, considering that rainfall within Honokōwai has significantly dropped within recent years. In addition, Ekolu is concerned about the Honokohau Ditch line. According to Ekolu, the system passes through several land owners and he questions who will maintain and continue to monitor the system.

Many concerns regarding the direct impact of the project were expressed by Kaimaile Makekau. A large concern is regarding the location of the project and its proximity to the existing sewage plant. Ms. Makekau expressed her concerns for the effects that the plant will have on the health of DHHL residents. The sewage plant releases odorless gasses that she describes as being "inhumane and unsanitary" and "harmful to human health." As a land owner, Makekau expressed her anger and frustration that her land is being infringed upon and that access to the roadways that lead to her project will be blocked by the DHHL project. She notes that she has documents to prove her ownership of particular easements and that she did not give DHHL permission to utilize her lands. In addition, Makekau notes that as a geneaological descendent of Honokōwai, her *kupuna* (ancestors) are buried in Honokōwai Valley. She has pictures and mappings of her family grave sites and historic areas, which she notes hsoudl be protected as historic sites.

# 6.2 POTENTIAL INDIRECT EFFECTS OF THE PROJECT

With regards to potential indirect effects, according to those consulted for this study, the most prominent and significant cultural practice within the vicinity of the current project revolves around the coastal marine resources of Honokōwai. Fishing, diving, and resource gathering continues to play a large role in the livelihood of those in the region. Siltation and construction run-off from project development and cumulative effects of storm water run-off from the lifespan of the development itself may result in harmful effects on the marine life and those who engage in cultural practices along the coasts. Some concern was also expressed about the increase in population affecting the integrity of the marine resources as more people are present to observe the locations of the generational fishing grounds which may result in the loss of the resource to over-fishing or destruction. To combat run-off Ekolu Lindsey suggested implementing bio-remediation throughout the development to

prevent sediment transport. For instance, native ground cover, rain gardens, or other remediation efforts proposed by the West Maui Ridge to Reef Initiative.

# 6.3 **RECOMMENDATIONS**

The following mitigation recommendations are provided to address the concerns and comments shared by cultural outreach participants. This is not meant to represent an exhaustive or limiting list; rather, these recommendations are put forward to encourage positive cultural resource management practices within the Honokōwai.

Participants shared that the rich agricultural history of the project area means that through proper stewardship the land has the ability to be fertile and productive once again. Stakeholders expressed a collective desire for residents and DHHL to grow a variety of plants throughout the project area. These plants may encourage and support traditional practices revolving around *hana no'eau* tasks and *mahi 'ai*, or food security; as well as, educational pursuits.. A *lā'au lapa'au* (Hawaiian medicine) or lei garden may serve as safe spaces for educational and cultural practices to occur. In terms of agricultural plants, preference should be given to native plants such as *kalo*; however, non-native edible plants like tomatoes, lettuce, and herbs may also be beneficial for the overall community. It is recommended that systems for developing the trade or sharing of crops grown in the *mauka* regions of the development with residents in the *makai* portion be examined and encouraged; thereby, allowing residents to engage in the traditional practice of *kuapo* (trade). A community trade. If successful, it is recommended that this facility be expanded to include an area to process fish and other meats.

Other recommendations for the project site include creating spaces for cultural practies to occur. As previously mentioned a *lei* or *lā'au lapa'au* garden would provide resources and materials for those who wish to practice traditional medicine or lei making. Another recommendation is to construct spaces such as a *hale wa'a* (canoe house) that the residents can use to learn about the cultural practice of voyaging. Within this vicinity, traditional plants can be cultivated to enchance the learning experience and support traditional practices. For instance, *wauke* (mulberry) can be grown and utilized to create *kapa* for the sail of a canoe.

The project should remain vigilant that descendants of the original *kuleana* land claims may come forward at any time. While it would be up to the Court system to decide whether or not a claim is valid, and in the case where they are awarded such claim, the Project and DHHL should be prepared to make the necessary changes (see Table 3). Therefore, it is recommended that the Project only develop on lands where DHHL holds clear title as the current landowner.

As previously noted Ms. Makekau is a genealogical descendant of Honokōwai. It is recommended that she retain unimpeded access to her lands above the DHHL lots. She should be informed about any construction or developments that may hinder her ability to temporarily access her property. Simmilarly, those who have geneaological conenctions or are affiliated with Mo'omoku Hui should be granted unimpeded access to Apana 3.

## 1.0 Executive Summary

This report presents the results of the transportation impact analysis report (TIAR) for the proposed Honokowai Master Plan (i.e., the "project"), which encompasses approximately 800 acres of mostly undeveloped land in the Honokowai community on the island of Maui. The project site is located mauka of Honoapiilani Highway and south of Kapalua Airport, extending on both sides of Honokowai Gulch. Most of the land is currently vacant and undeveloped with some agricultural uses. The purpose of the project is to develop a master plan for the lands with a focus on agriculture homesteading opportunities to the beneficiaries of the Department of Hawaiian Home Lands (DHHL), with additional potential for residential and community uses.

The proposed Honokowai Master Plan is envisioned to include a mix of homestead, agricultural, residential, industrial, and community uses that will be developed incrementally. Based on the nature of a master plan, the detail of the proposed land uses and specific size/area of each use assumed in this analysis were estimated by others for planning purposes to evaluate the development potential of the site. Modifications to the land uses assumed in this analysis are subject to change based on beneficiary input, market supply, demand, and community needs.

Several development concepts are under consideration for the site. At the time the TIAR was prepared, the most conservative land use assumptions were utilized in the analysis to determine the transportation impacts of the project's highest development potential. The most conservative scenario for the 800-acre site includes up to 655 acres proposed for development, 76 acres for roads and County facilities, and 46 acres reserved for conservation. The development scenario evaluated in the TIAR includes the following land uses and acreages:

- 343.0 acres of homestead subsistence agriculture (1-2 acre lots, up to 252 lots/homes)
- 76.5 acres of homestead residential single-family lots (10,000 square foot lots, up to 356 homes)
- 38.0 acres of homestead residential multi-family dwelling units (up to 573 units)
- 14.0 acres of supplemental agriculture
- 17.0 acres of community use agriculture
- 30.0 acres of community park space
- 28.1 acres of community commercial uses
- 16.0 acres of industrial use

The project is estimated to be constructed and occupied by Year 2028. Project access is proposed at three (3) locations that intersect with Honoapiilani Highway, which includes two modified intersections between Akahele Street and Lower Honoapiilani Road directly serving the project site, and a connection at the existing intersection at Halawai Drive. The modified intersections will replace existing short, paved

segments that currently provide access to the lands. Two internal connector roads between the Pulelehua Development and Honokowai Master Plan site will also provide additional access to Akahele Street.

The impact analysis was evaluated pursuant to guidelines established by the County of Maui and the Hawaii Department of Transportation - Highways Division - Planning Branch (HDOT). Intersection operations were evaluated for forecasted the future year 2028 traffic volumes without and with the addition of project-generated traffic. This TIAR documents evaluated traffic movements at the study intersections, average vehicle delays and the corresponding level of service (LOS) ratings. This study identifies specific recommended improvements to address instances where undesirable levels of service are projected. In addition, potential impacts to pedestrian, bicycle and transit facilities and services were also evaluated.

Following implementation of the project, the intersections of Honoapiilani Highway/Akahele Street, Honoapiilani Highway/North Project Access, and Honoapiilani Highway/Kaanapali Parkway-Halelo Street are forecast to operate at undesirable levels of service (LOS E or F) during the peak hours with the addition of project-generated trips, resulting in forecasted project impacts. Each location is described below.

- Honoapiilani Highway/Akahele Street will be significantly impacted by the proposed project. The recommended improvements include increasing the cycle lengths and optimizing the signal timing to improve operations and reduce the impact to a less than significant level.
- Honoapiilani Highway/North Project Access was evaluated as a side-street stop-controlled intersection with project implementation. Desirable LOS operations (LOS D or better) at the intersection can be achieved by installing a new traffic signal, which is warranted at project buildout.
- Honoapiilani Highway/Kaanapali Parkway-Halelo Street may be improved by modifying the eastbound lane configuration to one dedicated left turn, a shared through/left turn, and two dedicated right turns. The modification will improve intersection operations to LOS C in the AM peak hour, and LOS E in the PM peak hour (consistent with No Project condition). The recommended mitigation is consistent with the Pulelehua Development Traffic Impact Analysis Report (Austin, Tsutsumi, & Associates, August 2019).

No impacts to existing active transportation modes (walking and biking) or transit facilities and services are anticipated. However, the project is expected to add future pedestrian and bicycle demand to the project site and a section of Honoapiilani Highway where bike routes and crosswalks at the main intersections are provided. Recommended multi-modal improvements include the provision of continuous pedestrian and bicycle facilities that connect non-auto trips to transit stops/services, as well as transportation demand management strategies. The project is also expected to signalize the future project access points and provide controlled crosswalks if necessary, according to the Maui Vision Zero and HDOT design standard. Honoapiilani Highway is under State of Hawaii jurisdiction, therefore HDOT will make the final determination on the required improvements.

## 2.0 Introduction

This Transportation Impact Analysis Report (TIAR) presents the results of the study for the proposed Honokowai Master Plan located in West Maui. The purpose of the TIAR is to determine if the proposed land use changes will result in potentially significant impacts to traffic and mobility for any mode of transportation, including impacts to access at or adjacent to the project site. This document is intended to inform transportation decisions by local and State agencies regarding improvements to ameliorate project impacts and provide desirable transportation conditions after project buildout. This TIAR was conducted in accordance with the requirements of the affected government agencies, including the County of Maui and HDOT.

## 2.1 **Project Description**

The proposed Honokowai Master Plan encompasses approximately 800 acres of undeveloped land at Honokowai on Maui. The purpose of the project is to develop a master plan for the lands with a focus on agriculture homesteading opportunities to the Department of Hawaiian Home Lands (DHHL) beneficiaries. The project is envisioned to include a mix of homestead, agricultural, residential, industrial, and community uses that will be developed incrementally. Based on the nature of a master plan, the details of the proposed land uses and specific size/area of each use assumed in this analysis are estimated for planning purposes to evaluate the development potential of the site and associated effects to the transportation system. Modifications to the land uses assumed in this analysis are subject to change based on beneficiary input, market supply, demand, and community needs.

The project site is located mauka of Honoapiilani Highway within the Napili-Honokowai and Kaanapali Census Designated Places (CDP) boundaries on Maui, south of Kapalua Airport, and it extends on both sides of the Honokowai Gulch. The project site is within the West Maui Community Plan area. Portions of the site contain agricultural uses, though the majority of the site is undeveloped and vacant. The proposed project is an update to the former 2003 Honokowai Master Plan. The project site encompasses approximately 800 acres of land and several development concepts are under consideration for the site. The most conservative assumptions were utilized in the TIAR to determine the transportation impacts of the project's highest development potential, which includes up to 655 acres proposed for development, 76 acres for roads and County facilities, and 46 acres reserved for conservation. The development scenario evaluated in the TIAR includes the following land uses and acreages:

- 343.0 acres of homestead subsistence agriculture (1-2 acre lots, up to 252 lots/homes)
- 76.5 acres of homestead residential single-family lots (10,000 square foot lots, up to 356 homes)
- 38.0 acres of homestead residential multi-family dwelling units (up to 573 units)
- 14.0 acres of supplemental agriculture

- 17.0 acres of community use agriculture
- 30.0 acres of community park space
- 28.1 acres of community commercial uses
- 16.0 acres of industrial use

**Figure 1** illustrates the study area and the study intersections. **Figure 2** illustrates the proposed conceptual site plan, which represents a higher range of potential development for the site.

The project is estimated to be constructed and occupied by Year 2028. Specific land uses for the 28 acres of community commercial use are not yet defined but are intended serve the local community. Potential community-serving land uses may include a school, community center, health care facilities, or small neighborhood retail. For the purpose of this analysis, the community commercial acreage was split in half and evaluated based on the Institute of Traffic Engineer (ITE) trip generation rates for shopping center and recreational community center (i.e., 14 acres of each use). Should other land uses and/or higher trip generating uses be pursued than what is evaluated within this TIAR, a reassessment of traffic operations may be required.

Honokowai Master Plan – Transportation Impact Analysis Report

Honokōwai Beneficiary Community Master Plan

Figure 2

## 2.2 **Project Study Area and Analysis Scenarios**

The study evaluated potential project-related traffic impacts within the study area during the typical weekday AM and PM peak hours under current conditions and at full occupancy. The transportation analysis evaluated the operations at six (6) existing intersections in the vicinity of the proposed project. The study intersections are listed below and are shown on **Figure 1**:

- 1) Honoapiilani Hwy / Akahele St
- 2) Honoapiilani Hwy / Lower Honoapiilani Rd
- 3) Honoapiilani Hwy / Halawai Dr
- 4) Honoapiilani Hwy / Kakaalaneo Dr
- 5) Honoapiilani Hwy / Puukolii Rd
- 6) Honoapiilani Hwy / Kaanapali Pkwy-Halelo Street

The operations of the study intersections (and future project access roadways) were evaluated during the weekday morning (AM) and evening (PM) peak hours for the following analysis scenarios:

- **Existing (2020) Conditions** The analysis of existing traffic conditions was based on 2020 intersection turning movement counts collected for the analyzed peak hours. The existing conditions analysis also includes a description of key area roadways and an assessment of bicycle, pedestrian, and transit facilities and services near the site.
- **Future (2028) Baseline Conditions** Future Year 2028 volumes in the anticipated completion year of full project build-out were projected by increasing traffic volumes using an annual growth factor to account for ambient growth as well as adding traffic generated by other planned and approved projects within the vicinity. This scenario assumes the project is not constructed.
- **Future (2028) Plus Project Conditions** This traffic scenario provides projected traffic volumes and an assessment of operating conditions under Future Year (2028) Baseline Conditions *plus* the addition of project-generated traffic.

The project site will include four access points that will ultimately connect the project site to Honoapiilani Hwy. The affected intersections are included in the Future (2028) Plus Project analysis.

## 2.3 Analysis Methodology

The analysis of roadway operations performed for this study is based on procedures presented in the Highway Capacity Manual 6th Edition (HCM), published by the Transportation Research Board in 2016. The operations of roadway facilities are described with the term level of service (LOS). LOS is a qualitative description of traffic flow based on such factors as speed, travel time, delay, and freedom to maneuver. Six (6) levels are defined from LOS A, with the least congested operating conditions, to LOS F, with the most congested operating conditions. LOS E represents "at-capacity" operations. Operations are designated as

LOS F when volumes exceed capacity, resulting in stop-and-go conditions. The methodologies for signalized and unsignalized intersections are described below.

#### 2.3.1 Signalized Intersections

Signalized intersection operations were analyzed using the method described in Chapter 19: Signalized Intersections of the HCM. This LOS method analyzes a signalized intersection's operation based on average control delay per vehicle. Control delay alone is used to characterize LOS for the entire intersection or an approach. Control delay includes the initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The average control delay for signalized intersections is calculated using Synchro 10.0 and 11.0 (for future plus project condition) analysis software and is correlated to a LOS designation as shown in **Table 1**.

#### 2.3.2 Unsignalized Intersections

The operations of the unsignalized intersections were evaluated either using the method contained in Chapter 19: Two-Way Stop-Controlled Intersections or Chapter 20: All-Way Stop-Controlled Intersections of the *HCM 2016*. LOS ratings for stop-sign-controlled intersections are based on the average control delay expressed in seconds per vehicle. At all-way stop-controlled intersections the overall intersection delay and LOS is reported, and the LOS is characterized solely on control delay. At two-way or side-street-controlled (SSSC) intersections, the average control delay is calculated for each minor-street stopped movement and the major-street left turns, not for the intersection as a whole. For approaches composed of a single lane, the control delay is computed as the average of all movement; the movement with the worst (i.e., longest) delay is presented for SSSC. The average control delay for unsignalized intersections is calculated using Synchro 10.0 and 11.0 (for future plus project condition) analysis software and is correlated to a LOS designation as shown in **Table 2**. As shown, LOS F is assigned to the movement if the volume-to-capacity (V/C) ratio for the movement exceed 1.0 regardless of control delay.

Level of Service	Description	Delay in Seconds
A	Progression is extremely favorable, and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.	≤ 10.0
В	Progression is good, cycle lengths are short, or both. More vehicles stop than with LOS A, causing higher levels of average delay.	> 10.0 to 20.0
С	Higher congestion may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level, though many still pass through the intersection without stopping.	> 20.0 to 35.0
D	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	> 35.0 to 55.0
E	This level is considered by many agencies to be the limit of desirable delay. These high delay values generally indicate poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences.	> 55.0 to 80.0
F	This level is considered undesirable with oversaturation, which is when arrival flow rates exceed the capacity of the intersection. This level may also occur at high V/C ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be contributing factors to such delay levels.	> 80.0

#### Table 1: Signalized Intersection Level of Service Definitions

Source: *Highway Capacity Manual*, Transportation Research Board, 2016.

#### Table 2: Unsignalized Intersection Level of Service Definitions

Level of Service	Description	Delay in Seconds
А	Little or no delay	≤ 10.0
В	Short traffic delay	> 10.0 to 15.0
С	Average traffic delays	> 15.0 to 25.0
D	Long traffic delays	> 25.0 to 35.0
E	Very long traffic delays	> 35.0 to 50.0
F	Extreme traffic delays with capacity exceeded	> 50.0

Honokowai Master Plan Transportation Impact Analysis Report January 4, 2022

#### 2.3.4 Significant Impact Criteria

The analysis of future conditions compares the baseline or "no project" condition with conditions that include project-generated the project assuming full build-out and occupancy. This is done to determine whether the addition of project traffic is expected to result in a significant impact on the surrounding roadways. Based on previous studies conducted for the County of Maui, the minimum desired operating standard for a signalized intersection is LOS D for the overall intersection. Additionally, HDOT strives to universally maintain LOS D intersection operations and in their *Draft HDOT Best Practices for Traffic Impact Report* (June 2012) defines a significant impact when the operations of an intersection, turning movement, or roadway segment changes from LOS D or better to LOS E or F. Also, when evaluating intersection approach LOS at any location, other factors should be considered in the analysis, such as traffic volumes and potential secondary impacts to pedestrian, bicycle, and transit travel.

Each significant impact is further categorized as either a cumulative impact or a project-specific impact. At a signalized intersection, if the addition of project traffic is expected to degrade desirable service levels (LOS D or better) to undesirable service levels (LOS E or F), then the project is considered to have a project-specific impact. An impact is considered a cumulative impact at a signalized intersection if the addition of project trips exacerbates baseline LOS E or F operations and increase overall intersection delay by more than 5 seconds.

For unsignalized intersections, the criterion for a project-specific impact is the same as for signalized intersections regarding LOS as described above, but one or more signal warrants must also be met. The signal warrants used for this evaluation are those described in Chapter 4V of the Manual on Uniform Traffic Control Devices (MUTCD, 2009) published by the U.S. Department of Transportation Federal Highways Administration (FHWA). However, the project is determined to have a potentially significant cumulative impact when it adds any amount of traffic to a study location which includes a controlled approach operating at an undesirable level (i.e., LOS E or F) *and* one or more volume-based signal warrants are met.

Impacts to public transit, pedestrian facilities and travel, and bicycle facilities and travel are considered significant if the proposed project conflicts with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or if it will generate additional demand that cannot be reasonably accommodated by existing or planned multi-modal facilities.

## 3.0 Existing Conditions

This chapter describes the existing roadway network, existing operating conditions of the study intersections, and includes a discussion of the bicycle, pedestrian, and transit facilities located in the project study area.

## 3.1 Existing Transportation Facilities

A comprehensive data collection effort was undertaken to identify existing transportation conditions in the vicinity of the proposed project. The assessment of existing conditions relevant to this study includes an inventory of the street system, traffic volumes on these facilities, and operating conditions at key intersections. Existing public transit service and bicycle and pedestrian facilities are also described.

#### 3.1.1 Existing Roadway System

The key roadways in the vicinity of the site are described below.

*Honoapiilani Highway (Highway 30)* provides regional access around the western side of Maui, providing connection between West and Central Maui. The roadway is initially classified as a principal arterial in downtown Wailuku and as it extends south to Waikapu and Maalaea. As the roadway extends through Lahaina in West Maui, it transitions into a minor arterial. Through the regions of Kapalua and Honolua, it is classified as a major collector roadway, and ends in Honokohau Bay, where it becomes Kahekili Highway. In the project area, this undivided arterial extends in a north-south alignment between Kaanapali Parkway-Halelo Street and Lower Honoapiilani Road and provides two travel lanes (one in each direction) with separate lanes for left turns at intersections. North of Lower Honoapiilani Road, it changes to two-way, two-lane undivided roadway. Parking is not permitted on most segments of Honoapiilani Highway, and sidewalks are not provided. The posted speed limit ranges between 30 to 45 miles per hour (mph). In the vicinity of the project site, the speed limit is 40 mph.

*Lower Honoapiilani Road* is a two-lane urban major collector on the makai side of the project site. It provides access to residential areas, hotels, and businesses. Within the study area, Lower Honoapiilani Road is an undivided roadway that parallels and is makai of Honoapiilani Highway and extends from Honoapiilani Highway on the south to north, where it then intersects with Office Road. In the vicinity of the project, its posted speed limit is 20 mph.

*Puukolii Road* is a mauka-makai two-lane major collector on the south side of the project site. This roadway extends from Honoapiilani Highway in the makai side to Oil Road on the mauka side. Nearest to

the project site, Puukolii Road has a posted speed limit of 30 mph. On-street parking is not permitted, and no sidewalks are currently provided.

*Akahele Street* is a two-way, two-lane (one lane in each direction) roadway that begins from Lower Honoapiilani Road and terminates at the Kapalua Airport. Posted speed limit is 30 mph and on-street parking is not permitted. A pedestrian pathway is provided on the south side of Akahele Street that provides connection between the airport and Honoapiilani Highway.

*Halawai Drive-Kai Malina Parkway* is a two-way roadway provides access to hotels and businesses. The portion of the roadway on west of Honoapiilani Highway, Kai Malina Parkway, serves Honua Kai Resort and the Westin hotel. Halawai Drive is on east side of Honoapiilani Highway. On-street parking is permitted on Halawai Drive and most segments of Kai Malina Parkway.

*Kaanapali Parkway-Halelo Street* is a north south roadway that extends from Honoapiilani Highway to the south to Sheraton Maui Resort and Spa to the north. It is located on makai side of Honoapiilani Highway and provides access to various hotels and businesses. Kaanapali Parkway-Halelo Street is a two-way, two-lane divided roadway.

#### 3.1.2 Existing Transit Services

The Maui Bus service provides public transit service around the island with 13 bus routes. Each route operates seven (7) days a week, including holidays. Routes 25 and 28 provide service to a bus stop located within two (2) miles of the project site (see **Figure 3**). The Kaanapali Islander (#25) connects Kapalua to downtown Lahaina. The West Maui Islander (#28) connects Kaanapali to downtown Lahaina. Both routes operate along Honoapiilani Highway and provide hourly service.

Honokowai Master Plan – Transportation Impact Analysis Report

#### 3.1.3 Existing Bicycle Facilities

Bicycle facilities generally consist of three types of facilities, which are outlined below:

• <u>Bike or Shared Use Paths</u> provide a completely separate right-of-way and is designated for the exclusive use of bicycles and pedestrians with vehicle and pedestrian crossflow minimized. Generally, the recommended pavement width for a two-directional shared use path is ten (10) feet.

CLASS I - Multi-Use Path Provides a completely separated right-of-way for exclusive use of bicycles and pedestrians with crossflow minimized.

MUTCO R44A (CA)

• <u>Bike Lanes</u> provide a restricted right-of-way and are designated for the use of bicycles with a striped lane on a street or highway. Bicycle lanes are generally five (5) feet wide. Adjacent vehicle parking and vehicle/pedestrian crossflow are permitted.

BIKE PATH

• <u>Bike Route or Signed Shared Roadways</u> provide for a right-of-way designated by signs or shared lane pavement markings, or "sharrows," for shared use with pedestrians or motor vehicles.

• <u>Separated Bikeways or Cycle Tracks</u> provide a restricted right-of-way with physical separation and are designated for the use of bicycles with a raised barrier such as curbs or bollards. Separated

bikeways are generally five (5) feet wide with a three (3) foot minimum horizontal and vertical separation area. Adjacent vehicle parking is permitted, and vehicle/pedestrian crossflow is restricted to selected locations (e.g., driveways) indicated by breaks in the barrier and buffer.

Honoapiilani Highway and Lower Honoapiilani Road have signs indicating that they are bicycle routes. Short segments of dedicated bike lanes are provided on the makai side of the highway near Akahele Street and the mauka side near Kakaalaneo Drive to facilitate bicycle travel through the intersections. No other separate bicycle facilities such as lanes or paths are provided along the streets within the study area. As discussed in Section 8, safety and complete street improvements are planned along Lower Honoapiilani Highway. **Figure 4** shows the existing and proposed bicycle facilities in the area.

#### 3.1.4 Existing Pedestrian Facilities

Pedestrian facilities consist of crosswalks, curb ramps, and pedestrian signals at signalized intersections, as well as sidewalks and paths along segments between intersections. Sidewalks are generally not currently provided within the study area, with the exception of:

- Sidewalk on the south side of Halawai Drive;
- Fragmented sidewalks on both sides of Lower Honoapiilani Road;
- Buffered pedestrian walkway on the south side of the Akahele Street; and
- Buffered sidewalk on the makai side of Kaanapali Pkwy.

No sidewalks or formal paths are provided on either side of Honoapiilani Highway between Kaanapali Parkway-Halelo Street and Akahele Street.

Existing pedestrian crosswalk facilities at the study intersections are described below.

- 1. Honoapiilani Highway & Akahele Street
  - Signalized with high visibility crosswalks and pedestrian signals on all legs of the intersection.
- 2. Honoapiilani Highway & Lower Honoapiilani Road
  - Signalized with high visibility crosswalks and pedestrian signals on the north, makai, and mauka legs.

- 3. Honoapiilani Highway & Halawai Drive
  - Signalized with high visibility crosswalks and pedestrian signals on the north, makai, and mauka legs. Curb ramps are also provided on the north and mauka legs.
- 4. Honoapiilani Highway & Kakaalaneo Drive
  - o Unsignalized (side street stop controlled), no pedestrian facility is provided.
- 5. Honoapiilani Highway & Puukolii Road
  - Signalized with high visibility crosswalks and pedestrian signals on the north, makai, and mauka legs.
- 6. Honoapiilani Highway & Kaanapali Parkway-Halelo Street
  - Signalized with high visibility crosswalks and pedestrian signals on the north, makai, and mauka legs. Pedestrian islands are also provided on north and makai legs.

Honokowai Master Plan - Transportation Impact Analysis Report

Honokowai Master Plan Transportation Impact Analysis Report January 4, 2022

## 3.2 Existing Intersection Volumes and Lane Configurations

The operations of the six (6) existing study intersections were evaluated during weekday morning (6:00 to 9:00 AM) and evening (3:00 to 6:00 PM) peak-period conditions. Traffic counts were collected at the study intersections on March 10, 2020 when local schools were in session and prior to travel restrictions related to the global pandemic of COVID-19. The weekday AM peak hour of traffic for the study area generally occurs between the hours of 7:15 AM and 8:15 AM. During the weekday afternoon/evening, the PM peak hour of traffic generally occurs between the hours of 4:00 PM and 5:00 PM. Raw traffic count data sheets are provided in **Appendix A**.

A field visit was not conducted for the project due to the imposed travel restrictions related to the global pandemic. Existing lane configurations were determined from satellite imagery and signal timing sheets were obtained from Hawaii Department of Transportation (HDOT). **Figure 5** presents the existing AM and PM peak-hour turning movement volumes, corresponding lane configurations, and traffic control devices.

## 3.3 Existing Intersection Levels of Service

Existing peak hour volumes and lane configurations were used to calculate the LOS for each of the study intersections. The results of the existing LOS analysis are presented in **Table 3**. Corresponding LOS calculation sheets are included in **Appendix B**.

TIGLINE 5

## Peak Hour Traffic Volumes and Lane Configurations Existing (2020) Conditions

Intersection	Traffic	Peak Hour	New Existing C	Conditions
			(sec/veh) <sup>1</sup>	LOS <sup>2</sup>
1. Honoapiilani Hwy & Akabele St	C' a sal' sal	AM	16.1	В
	Signalized	PM	17.1	В
2. Honoapiilani Hwy & Lower Honoapiilani Rd	Cinnalizad	AM	12.5	В
	Signalized	PM	17.8	В
3. Honoapiilani Hwy & Kai Malina Pkwy-Halawai Dr		AM	13.1	В

	Signalized	PM	39.5	D

#### Table 3: Existing Peak Hour Intersection LOS

Source: Fehr & Peers, 2020

#### Notes:

<sup>1</sup> The vehicular delay and LOS for the worst movement is reported for side-street stop-controlled (SSSC) intersections.

<sup>2</sup> LOS calculations performed using the Highway Capacity Manual (HCM) method.

The results of the LOS calculations indicate that all the existing study intersections operate at a desirable level of service (LOS D or better) during the weekday AM and PM peak hours. However, it should be noted that some individual turning movements/approaches operate below LOS D, even when the overall intersection is operating at a desirable LOS. Movements operating at LOS E or F during peak periods is not uncommon, especially on high volume, urban roadways and are typically only considered notable problems when they negatively impede other turning movement flows. Most of the operating movements with longer delays are left-turn movements. This is attributed to the existing signal timing allocating more green time to the through movements, which in most cases, will cause the left-turn movements to operate at LOS E or F in at least one of the peak hours.

## 3.4 Active Transportation Collisions and Safety

Safety and collisions are a top concern in Maui, where 34 bicycle or pedestrian collisions with vehicles were reported within an eight-year period (2010 to 2017) in the project vicinity, as displayed in **Figure 6**. Collision data are from the Maui Police Department. The collisions included four (4) incapacitating injuries and one (1) fatality, with a higher prevalence of bicycle and pedestrian involved collisions along Lower Honoapiilani Road and at signalized intersections on Honoapiilani Highway.

A key factor in bicycle and pedestrian collisions is the lack of separated facilities such as paved sidewalks and bicycle lanes. The lack of separated facilities requires people to walk and bike within the travel lanes, unprotected from vehicular traffic. Additional safety and comfort features such as protection from the elements (i.e., shade or rain protection), lighting, and facility quality conditions contribute to either encouraging or discouraging non-automobile trips made by foot or bike.

### Bike/Pedestrian Collisions and Vehicle Fatality Data

Honokowai Master Plan – Transportation Impact Analysis Report

# 4.0 Future (2028) Baseline Conditions

To evaluate the potential impacts of traffic generated by the proposed project on the surrounding street system, it was necessary to first develop estimates of future traffic conditions in the area without the project. Future traffic conditions without the project reflect traffic increases due to regional growth and development. These conditions are referred to as the baseline condition (i.e., "no project" condition). The forecasted future or cumulative baseline traffic volumes were then used to identify impacts on the roadway system. Development of these future traffic scenarios is described in this chapter.

# 4.1 Future (2028) Traffic Estimates

The following section summarizes the growth assumptions used to estimate the amount of traffic that would be added to existing intersection volumes to determine Future (2028) Baseline Conditions traffic volumes.

#### 4.1.1 Areawide or Ambient Traffic Growth

To estimate Future (2028) Baseline traffic growth over existing conditions, increases were applied to each intersection in the study area based on an ambient growth factor. Based on review of regional traffic forecasts, the Pulelehua Development TIAR and other traffic studies in the project vicinity, the traffic volumes on major study area roadways are anticipated to increase by approximately one-half (0.5) percent per year. The growth rate was compounded over an eight-year timeframe (2020 to 2028) to the targeted buildout of Honokowai. The growth rate is considered reasonable given the nature of the adjacent areas and surrounding neighborhoods.

#### 4.1.2 Cumulative Project Traffic Generation and Assignment

In addition to ambient growth, future baseline traffic forecasts include the effects of other planned/approved development projects in the vicinity of the project site expected to be constructed within Honokowai's development timeframe. Below is a list of cumulative projects identified in the study area (expected buildout year listed in parentheses). Traffic from the cumulative projects was subsequently added to the 2028 baseline traffic projections. Cumulative project peak hour traffic volumes are presented in **Appendix C**.

- *Pulelehua development (2035):* This project is bounded by Honoapiilani Highway to the west and south of Kapalua Airport to the east and includes 100 single-family residential units, 800 multi-family residential units, an elementary school, a 10-acre park and three (3) retail centers.
- *Residences of Pailolo Place (2022)*: This project is located in Kapalua mauka of Lower Honoapiilani Road. The project proposes to develop a 42-unit multi-family condo across from the Napili Kai Beach Resort.
- *Mahana Estates (2022)*: This project is located in Kapalua mauka of Honoapiilani Highway within the larger Kapalua residential development. The project proposes to develop 51 single-family luxury homes.
- *Wailele Ridge (2022)*: Previously known as West Maui Village, this project is located south of Honoapiilani Highway just east of Maui Preparatory Academy. The project proposes to develop 158 single-family units in 25 buildings.
- *West Maui Hospital and Medical Center (2022):* This project is located east of Honoapiilani Highway in Kaanapali. The project proposes to develop a critical access hospital, a skilled nursing facility, an assisted living facility, medical office buildings and a rehabilitation facility.
- *Lanikeha Kaanapali (2022):* This project is located east of Honoapiiliani Highway and across from Kaanapali Parkway-Halelo Street. The project consists of 132 lots in a gated community, with Honoapiilani Highway access provided via Kekaa Drive and Kualapa Loop.
- *Kaiaulu o Kukuia Apartments Project (2022):* This project is located across from Lahaina Business Park on the north side of Keawe Street within the larger Villages of Leialii development. The project proposes to develop 200 multi-family housing units through the Hawaiian Housing Finance and Development Corporation (HHFDC).
- Lahaina Business Park Infill (2022): Lahaina Business Park is approximately 68% occupied with several lots currently undeveloped.
- Lahaina Cannery Mall Gas Station (2020): gas station and retail that will be constructed at the Lahaina Cannery shopping center located makai of the Honoapiilani Highway/Keawe Street intersection
- *Kahoma Village (2022)*: This project is located south of the Lahaina Cannery Mall on 22 acres of land. The project proposes to develop 101 single-family homes and 102 multi-family homes.
- *Kupuohi Apartments (2022)*: This project is located in the Lahaina Business Park south of Keawe Street. The project is going through the entitlements process and proposes to develop 89 multifamily units.

Traffic from the cumulative projects that will travel through the study area was added to the ambient background volumes. The resulting traffic volumes, representing Future (2028) Baseline Conditions, are presented in **Figure 7.** These future projections consider the estimated overall growth in the surrounding area without the addition of traffic generated by the Honokowai project.

#### 4.1.3 Future (2028) Baseline Roadway System Improvements

Based on coordination with agency staff and a review of public documents, no substantive roadway improvements or transportation system changes are projected to occur through 2028 in the immediate vicinity of the project site or at the study intersections. While mitigation measures have been proposed in the impact analysis reports for various projects, those improvements have not been included in this analysis given that they have not been fully programmed or funded at the time this report was prepared. This provides a more conservative apporach for project analysis purposes.

# 4.2 Future (2028) Baseline Levels of Service

LOS calculations were conducted to evaluate the operating conditions of the study intersections under Future (2028) Baseline (No Project) Conditions based on the projected growth in traffic. The results of the LOS analysis for the study intersections under Future (2028) Baseline Conditions are presented in **Figure 7** and **Table 4**. The corresponding LOS Calculation sheets are included in **Appendix B**.

Intersection	Traffic Control	Peak Hour	Future Ba Conditi	iseline ions
			(sec/veh) <sup>1</sup>	LOS <sup>2,3</sup>
1 Hanaaniilani Huus Qu Aliabala Ct	Cineralizzad	AM	32.1	С
T. Honoapillani Hwy & Akanele St	Signalized	PM	41.6	D
	c: I: I	AM	17.3	В
2. Honoapillani Hwy & Lower Honoapillani Rd	Signalized	PM	28.1	С
	C' I' I	AM	16.0	В
3. Honoapillani Hwy & Halawal Dr	Signalized	PM	15.7	В
A Hansen Hand Hansen Dr	6666	AM	41.9	E
4. Honoapillani Hwy & Kakaalaneo Dr	222C	PM	61.4	F
	C' I' I	AM	11.9	В
5. Honoapillani Hwy & Puukolii Rd	Signalized	PM	15.4	В
	Ci ana di ana d	AM	57.2	E
o. Honoapillani Hwy & Kaanapali Pkwy-Halelo St	Signalized	PM	71.2	E

Table 4: Future (2028) Baseline Peak Hour Intersection LOS

Source: Fehr & Peers, 2020

Notes:

- <sup>2</sup>LOS calculations performed using the Highway Capacity Manual (HCM) method.
- <sup>3</sup> Undesired LOS and corresponding seconds of delay per vehicle are highlighted in **bold**.

<sup>&</sup>lt;sup>1</sup> The vehicular delay and LOS for the worst movement is reported for side-street stop-controlled (SSSC) intersections.

The analysis results indicate that four (4) study intersections are forecast to operate at an overall LOS D or better under Future (2028) Baseline Conditions. The following two (2) study intersections are forecast to operate at LOS E or F for at least one peak hour:

- 4. Honoapiilani Hwy & Kakaalaneo Dr LOS E (AM peak hour) and LOS F (PM peak hour)
- 6. Honoapiilani Hwy & Kaanapali Pkwy-Halelo Street LOS E (AM and PM peak hours)

At Honoapiilani Highway and Kakaalaneo Drive, which is unsignalized, the critical movement is the westbound left-turn, which operates at LOS E (AM) and F (PM). All other turning movements operate at LOS C or better.

At Honoapiilani Highway and Kaanapali Parkway-Halelo Street, the eastbound and westbound through movements and southbound through movements operate at LOS E in the AM peak hour. The southbound through and all four left-turn movements are projected to operate at LOS F during the PM peak hour.

TILLINE 7

Peak Hour Traffic Volumes and Lane Configurations Future Baseline (2028) Conditions

# 5.0 Project Traffic Estimates

This chapter describes the forecasted number of vehicle trips that would result from implementation of the proposed project. Future traffic added to the roadway system by the project is estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. The first step estimates the amount of project-generated traffic which will be added to the roadway network. The second step identifies the direction of travel to and from the project site and the proportion of traffic on each potential travel path. The new trips are assigned to specific street segments and intersection turning movements during the third step. This process is described in more detail in the following sections.

# 5.1 **Proposed Land Uses**

The proposed Honokowai Master Plan is envisioned to include a mix of homestead, agricultural, residential, industrial, and community uses that will be developed incrementally. Based on the nature of a master plan, the details of the proposed land uses and specific size/area of each use assumed in this analysis are estimated for planning purposes only to evaluate the development potential of the site. Modifications to the land uses assumed in this analysis are subject to change based on beneficiary input, market supply, demand, and community needs.

The development scenario evaluated in the TIAR includes the following land uses:

*Homestead Subsistence Agriculture Lots*: up to 343 acres of 1-2 acre lots (up to 252 lots total). Based on the intent of the land use and for the purpose of the TIAR, one single family residential unit was assumed on each lot.

*Homestead Residential Single-Family Lots:* up to 76.5 acres of 10,000 square-foot lots, which would allow for up to 356 single family homes.

*Homestead Residential Multi-Family Dwelling Units:* up to 38 acres of up to 573 attached multi-family dwelling units. Multi-family development may include Kupuna Housing.

*Supplemental and Community Use Agriculture*: up to 14.0 acres of supplemental and 17 acres of community use agricultural lands. It is assumed that these agricultural lands will serve the on-site residents and will not generate additional traffic.

Community Park: up to 30 acres of community park space is proposed for resident and public use.

*Community Commercial:* Up to 28.1 acres of land is designated for community commercial uses. Specific land uses for community commercial use are not yet defined but are intended serve the Honokowai

Master Plan community. Potential community-serving land uses may include a school, community center, health care facilities, or small neighborhood retail. For the purpose of this analysis, which is considered conservative, the community commercial acreage was split in half and evaluated based on the ITE trip generation rates for shopping center and recreational community center (i.e. 14 acres of each use). Should other land uses and/or larger community uses be pursued than what is evaluated within this TIAR, a reassessment of traffic operations may be required.

Industrial Use: up to 16 acres of industrial use is proposed in the development concept.

# 5.2 **Project Trip Generation Estimates**

The vehicle trip generation for the proposed project was estimated using standard trip rates published in the ITE *Trip Generation Manual* (11<sup>th</sup> Edition, 2020) for each proposed land use. The Honokowai Master Plan concept has identified general acreage areas for the proposed industrial and community uses. ITE does not have trip rates based on acreage for either use. Therefore, this TIAR assumed a 0.3 floor area ratio (FAR) to estimate the potential square footage of 16 acres of industrial use, which equates to approximately 204,000 square feet. Similarly, square footage for the 28 acres of community uses was based on an assumed FAR of 0.25, which equates to approximately 306,000 square feet of commercial use (split between shopping center and recreational community center trip rates).

The estimated project trip generation was then adjusted using the Mixed-Use (MXD) Trip Generation Model developed by Fehr & Peers and the Environmental Protection Agency (EPA), which is based on statistically superior data compared to the mixed-use methodology used by ITE alone. The model recognizes that traffic generation by mixed-use and other forms of sustainable development relate closely to the density, diversity, design, destination accessibility, travel proximity, and scale of development. The model estimates the percentage of daily and peak hour trips that remain to the project site, as well as external transit, walk and bicycle mode splits based on local West Maui data from household travel survey or census information. The provision of the bus transit system in close proximity to the project site would allow some users of the proposed project to reduce the number of vehicle trips they make by providing a reliable alternative to auto travel. In some cases, users may rely exclusively on the bus. Some commercial users may bike or walk from hotels and residential areas adjacent to the project site.

**Table 5** lists the ITE trip generation rates and the estimated project trip generation is shown in **Table 6**. The project is estimated to generate approximately 18,955 net new daily vehicle trips, including 1,057 net new AM peak hour trips (495 inbound/564 outbound), and 1,592 net new PM peak hour trips (832 inbound/760 outbound).

Honokowai Master Plan Transportation Impact Analysis Report January 4, 2022

# 5.3 **Project Trip Distribution**

The geographic distribution of trips generated by the proposed project is dependent on characteristics of the street system serving the project site; local land use patterns; accessibility of routes to and from the project site; and non-residential areas to which local residents may be drawn (e.g., job centers, shopping destinations, services, and schools). The project trip distribution pattern was developed by assuming no significant changes in the characteristics of the existing transportation system. **Figure 8** illustrates the project trip distribution patterns.

# 5.4 **Project Trip Assignment**

Using the estimated trip generation and the distribution patterns, the forecasted traffic generated by the proposed project was assigned to the study intersections. Project access will be provided at the following locations:

- Honoapiilani Highway/North Access Road is proposed to provide full access in and out of the project site. Left- and right- turns will be permitted.
- Honoapiilani Highway/South Access Road is proposed to provide right-in, right-out project access.
- Honoapiilani Highway/Halawai Drive is proposed to provide full access from the highway to the project site. A new connector road will connect Halawai Drive to the Honokowai Master Plan site.

It should be noted that two new connector roads are planned between the future Pulelehua Development and the Honokowai Master Plan development areas. The new roads will be located mauka of Honoapiilani Highway between the properties. The future connector roads will provide additional connections and access for both properties to Honoapiilani Highway via Akahele Street. Conservatively, it was assumed that the majority of trips generated within the Honokowai Master Plan would use the project access points, with a minor portion of northbound project trips assigned through the Pulelehua connector roads.

Figure 9 shows the assignment of project trips at each study intersection.

Honokowai Master Plan - Transportation Impact Analysis Report

Honokowai Master Plan – Transportation Impact Analysis Report

Pulelehua Driveways

# 6.0 Future (2028) Plus Project Conditions

This chapter presents the analysis of the potential impacts on the roadway system due to projected increases in traffic, including the addition of traffic generated by the project in the estimated opening year of 2028. The Future (2028) Plus Project Conditions roadway network is the same network assumed under the Future (2028) Baseline scenario with the exception of two new access roadways along Honoapiilani Highway to provide access to the Honokowai Master Plan area and Pulelehua development. The analysis compares the projected levels of service at each study intersection under future baseline (or "No Project") conditions against the "Plus Project" scenario to determine potential project-related impacts.

# 6.1 Future (2028) Plus Project Level of Service

This section presents an analysis of potential future traffic conditions for Future (2028) Plus Project Conditions. To forecast the peak hour operating conditions at each study intersection, the project trip assignments for the project scenario were added to the Future (2028) Baseline traffic volumes to yield Future (2028) Plus Project volumes.

The operational analysis assumes construction of two (2) formalized intersections on Honoapiilani Highway that would provide access to the project site. The formalized intersections will replace existing short, paved segments that currently provide driveway access to the lands. **Figure 10** presents the anticipated lane configurations and projected Future (2028) Plus Project AM and PM peak hour volumes at each study intersections. Intersection 7 (Honoapiilani Highway/North Access) is anticipated to provide full access (i.e. left- and right- turns) and was initially evaluated as a side-street stop-controlled intersection in the operations analysis. Intersection 8 (Honoapiilani Highway/South Access) is anticipated to be limited to right-in right-out (RIRO) access and unsignalized with side-street stop-control. Additional access points and connections on the north side of the project site are planned as part of the Pulelehua Development; Honokowai Master Plan project trips were not assumed to use the intersections substantially and operations at these intersections were not evaluated. A sensitivity analysis was conducted by assigning more project trips through Pulelehua at Akahele Street and it was not forecast to significantly change the operation results.

Source: Fehr & Peers, 2021

Notes:

<sup>1</sup> Whole intersection weighted average stopped delay and LOS expressed in seconds per vehicle for signalized and all-way stopcontrolled intersections. The vehicular delay and LOS for the worst movement is reported for side-street stop-controlled intersections.

 $^{2}\,\text{LOS}$  calculations performed using the Highway Capacity Manual (HCM) method.

 $^{\rm 3}$  Undesired LOS and corresponding seconds of delay per vehicle are highlighted in  ${\rm \textit{bold}}.$ 

According to the results in **Table 7**, under Future (2028) Plus Project scenarios, the addition of projects trip is forecast to result in undesirable levels of service at five (5) study intersections:

- 1. Honoapiilani Hwy & Akahele St LOS E (PM peak hour)
- 4. Honoapiilani Hwy & Kakaalaneo Dr LOS F (AM and PM peak hours)
- 6. Honoapiilani Hwy & Kaanapali Pkwy-Halelo St LOS F (AM and PM peak hours)
- 7. Honoapiilani Hwy & North Access LOS F (AM and PM peak hours)
- 8. Honoapiilani Hwy & South Access LOS F (PM peak hour)

The majority of the movements projected to operate at an undesirable level are left turns. At signalized locations, this is attributed to the signal timing allocating more green time to the through movements on the highway, which in most cases has caused the left-turn movements to operate at LOS E or F in at least one of the peak hours. For left-turns at unsignalized intersections, this is primarily due to the high traffic volume on Honoapiilani Highway and limited number of gaps for vehicles on the stop-controlled approaches to make left-turns.

# 6.2 Signal Warrant Analysis

As noted in Section 2.3.4, a significant impact is defined to occur at unsignalized intersections if operations change from LOS D or better to LOS E or F (or LOS E or F operations are exacerbated), <u>and</u> one or more signal warrants are met. As noted in Section 6.1, the intersections of Honoapiilani Highway & Kakaalaneo Drive and Honoapiilani Highway & North Access during both peak hours and Honoapiilani Highway & South Access intersection during PM peak hour are projected to operate at an undesirable LOS (LOS E or F) under Future (2028) Plus Project conditions. To determine whether significant impacts would occur at any of these intersections, four-hour and eight-hour signal warrant analyses were conducted. Signal warrant worksheets are included in **Appendix D**.

The intersection of Honoapiilani Hwy & North Access is projected to meet the four-hour and eight-hour signal warrants in the Future (2028) Plus Project Scenario. It should also be noted that the controlled movement is a right-turn movement and traffic will be able to merge onto the highway without coming to a complete stop. However, the Honoapiilani Hwy & Kakaalaneo Dr and Honoapiilani Hwy & South Access intersections did not meet signal warrants in the Future 2028 Plus Project scenario.

# 6.3 Significant Intersection Impacts

Based upon the project impact criteria and the results of the operations analysis, development of the proposed Honokowai Master Plan is forecast to result in project-related impacts at the following intersections:

Intersection 1, Honoapiilani Hwy & Akahele St, is forecast to operate at LOS C and LOS D in the AM and PM peak hours, respectively, under Future (2028) Baseline conditions. The addition of project trips is forecast to result in an undesirable LOS E in the PM peak hour, which would result in a project-related impact.

Intersection 6, Honoapiilani Hwy & Kaanapali Pkwy, is forecast to operate at an undesirable LOS E during both peak hours, under Future (2028) Baseline conditions. The addition of project trips is forecast to result in undesirable LOS F operations in both peak hours with increase in delay more than 5 seconds, which would result in a project-related impact.

Intersection 7, Honoapiilani Hwy & North Access, initially assumed as a side-street stop-controlled intersection, is forecast to operate at an undesirable LOS F in both peak hours, under Future (2028) Plus Project conditions. The signal warrants are also met which would result in a project-related impact.

# 6.4 **Recommended Improvements**

Recommended improvements were identified to increase the capacity and/or efficiency of the roadway system at the locations where the addition of project-generated traffic is forecast to cause or contribute to a project-related impact.

Intersection 1: Honoapiilani Hwy & Akahele St: increase the cycle length to 180 seconds and optimize signal timings. The recommended modifications are forecast to improve the signal operation to a desirable LOS D in the PM peak hour with buildout of the proposed project.

Intersection 6: Honoapiilani Hwy & Kaanapali Pkwy-Halelo St: modify the eastbound lane configuration to provide one dedicated left turn, a shared through/left turn, and two dedicated right turn lanes. The improvement is forecast to improve intersection operations to LOS C in the AM peak hour, and LOS E in the PM peak hour to less than significant levels. The proposed improvements are consistent with the Pulelehua Development TIAR (Austin, Tsutsumi, & Associates, August 2019).

Intersection 7: Honoapiilani Hwy & the North Access: signalize the intersection. The forecasted traffic volumes meet the four-hour and eight-hour traffic signal warrants. The operations analysis suggests signalizing the intersection would improve traffic operations to desirable LOS conditions. The recommended lane configuration includes:

- One through and one dedicated left turn lane on southbound approach;
- One through and one shared through/right turn lane on northbound approach; and
- One dedicated left turn and one dedicated right turn lane on westbound approach.

Intersection 8: Honoapiilani Hwy & the South Access: Although the analysis did not result in a significant impact because the signal warrant is not met, it is possible to minimize the delay for traffic turning onto the highway with design treatment that are consistent with the agency's standards such as implementing a merge lane consistent with HDOT standard.

# 7.0 Site Access and Circulation

Proposed vehicle access to the site will be provided via three (3) project-serving access roadways along Honoapiilani Highway, and two additional access points via an adjacent development located north of the project site. The Honoapiilani Highway access points include: the North Access is proposed to provide full-access nearest to Pulelehu, the South Access, just north of the Honokowai Gulch, is proposed to be limited to right-turn access only, and a third connection at Halawai Drive near the Lahaina Waste Water Reclamation Plant. The North Access roadway will be the spine of the northern portion of the project site, extending between Honoapiilani Highway and the mauka project boundary, connecting to the internal system of roadways. The North and South Access points will serve the northern portion of the project site, providing direct access to the community commercial uses, multi-family residential, single-family residential areas, and agriculture areas. A new extension is planned from the existing terminus of Halawai Drive northerly over the Honokowai Gulch to connect to the north portion of the Honokowai Master Plan site and circulation system. Access from Halawai Drive will connect to the spine of the southern portion of the site and primarily serve the proposed industrial and agricultural lands. The proposed access points are adequate to serve the proposed project demand and maintain adequate spacing between intersections along Honoapiilani Highway. The fourth and fifth potential access points are through the adjacent Pulelehua Development on the north side of the project site, which provides additional access to Akahele Street.

A series of internal circulation roadways are planned to provide adequate circulation throughout the project site. The internal roadways are anticipated to be two-lane collector and local roadways, with select turning lanes provided at intersections to facilitate turning movements and maintain traffic flow. Future specific studies for the on-site intersections may be required to determine the appropriate traffic control devices and turning lane requirements.

The project's community commercial component is proposed directly mauka of Honoapiilani Highway and surrounded by multi-family and single-family residential neighborhoods within proximity for walking and biking trips. The large community park will also be within walking distance from the multi- and singlefamily residential areas and some agricultural lots. In addition, walking pathways are proposed in the northern portion of the site within the homestead subsistence agriculture area. The walking pathways are proposed between the northern project boundary and the Honokowai Gulch and will provide pedestrian connections to and from the smaller community parks.

# 8.0 Multi-Modal Assessment

The proposed layout of the Honokowai Master Plan concentrates the land uses with greater propensity for walking and biking trips, including locating the community commercial uses immediately adjacent to the multi-family and single-family residential areas. While the land use and site design are refined over time, pedestrian and bicycle facilities are encouraged to be provided throughout the internal circulation system, including separated sidewalks or trails between land uses, adequate crossing facilities, bicycle lanes or routes, and short- and long-term bicycle parking facilities.

Future growth on Maui will result in greater demand of the transportation system that provides access between destinations, delivery of goods, emergency response routes and services, and impacts the quality of life for residents. Managing the volume and effects of vehicular traffic (including visitor traffic) through better mobility choices is of great importance to grow sustainably. Reducing the use and reliance on vehicles will subsequently improve air and water quality, reduce greenhouse gas emissions, improve public health, and provide more equitable transportation choices. In addition, more walking and biking reduces road congestion, repairs, and maintenance while allowing individuals to save on costs associated with automobile ownership.

Several related plans have been developed in Maui that focus on mobility and improving walking, biking, and transit in West Maui, including:

- The Maui Long Range Transportation Plan (Hele Mai Maui 2040, Maui Metropolitan Planning Organization (MauiMPO)) indicates a high demand from the community for improvements to the multi-modal transportation network in West Maui. It includes a variety of recommended projects that add connections to support people walking, biking, and riding the bus throughout Maui. Within the project vicinity, Hele Mai Maui 2040 identifies safety corridor and complete street improvements along Lower Honoapiilani Highway. Multi-paths including the West Maui Greenway and a transit hub in Lahaina are also proposed.
- The Maui Short Range Transit Plan (SSFM, April 2016) stated transit ridership on the Kaanapali Islander, which provides service in the project vicinity, is high and frequently overloaded. It states that the West Maui Islander along Lower Honoapiilani Road is a popular route with passenger activity at almost every stop, including high volumes of visitors and employees in the area.
- According to the West Maui Community Plan prepared by the County of Maui and Bike Plan Hawaii (2003) prepared by HDOT, no separate bike facilities (i.e., paths or lanes) are proposed on any of the street segments fronting the project site. Several other projects are proposed beyond the immediate study area, but they do not include separate connections to the site itself. No proposed bicycle projects in West Maui were included in the draft list of projects in the June 2018 Transportation Improvement Program published by the MauiMPO.

Based on the review of related plans, no additional pedestrian or bicycle improvements were identified that would affect street segments fronting the site or connecting to the study intersections. Modifications to transit service are not anticipated prior to completion of the proposed project.

Comprehensive multi-modal connections to and from transit stops between the Honokowai Master Plan site and Honoapiilani Highway are highly encouraged to provide and promote multi-modal travel options. Specifically, improved bicycle and pedestrian facilities should be provided between the project site and Lower Honoapiilani Highway, which will extend opportunities to connect with existing transit service as well as future planned mobility improvements in Lahaina for improved regional connectivity.

# 8.1 **Potential Active Transportation and Transit Impacts**

Implementation of the proposed project will not conflict with implementation of any future planned pedestrian, bicycle, or transit facilities. As such, no impacts to active transportation are anticipated as a result of the project. However, the proposed project is expected to generate bicycle, pedestrian, and transit trips to and from the project site. The adjacent land uses within Kaanapali include retail, hotel, and employment opportunities as well as transit service along Lower Honoapiilani Highway that are within proximity where walking and bicycling would be most likely to occur.

Bicycle and pedestrian facilities are not currently provided on the project site due to the nature of the undeveloped lands mauka of Honoapiilani Highway. The nearest existing crosswalk facilities are located at Akahele Street and Lower Honoapiilani Highway. Therefore, additional pedestrian crossing facilities are recommended when traffic signals are installed at Honoapiilani Highway/North Access road to the site. Where feasible, additional pedestrian connections to Lower Honoapiilani Highway from the makai side of Honoapiilani Highway should be considered to minimize walking distances and provide greater access to public uses including beaches, parks, and transit service along Lower Honoapiilani Highway.

Based on the Maui Short Range Transit Plan, transit ridership can be high in the project vicinity. Existing bus operations should be evaluated intermittently to determine if adequate transit capacity is available to absorb any potential increase from project implementation. For primary roadways within the project site and at key intersections, street design and frontage improvements should accommodate future bus stops including shelters and other stop amenities.

# 8.2 Multimodal Safety

While the project-generated pedestrian and bicycle volumes are initially expected to be low, the addition of any active travelers along the Honopiilani Highway may result in people walking or biking along the roadway, which could result in a potential safety issue and a significant multimodal impact. To address this safety issue and encourage non-automobile travel and provide greater connectivity to nearby uses, the project is expected to signalize access points where there are existing and/or future vehicle conflicts and also provide controlled crosswalks at those access points if possible. The design should be consistent with the applicable agency standard.

The MauiMPO led Maui Vision Zero, an initiative to eliminate fatalities and serious injuries resulting from traffic collisions by 2040. The project culminates with a Vision Zero Maui Action Plan that "identifies strategies that lower speeds, design streets to be more forgiving for human error, and prioritize safety for everyone, no matter their age, ability, background, race, income, or socioeconomic status." The Vision Zero Maui Action Plan completed in March 2021. The project should consider including designs/treatments within the study area consistent with the Maui Vision Zero action plan and design standard.

# 8.3 **Potential Travel Demand Management Strategies for Project**

To reduce overall site-generated traffic volumes and auto dependency, the project should consider implementation of transportation demand management (TDM) strategies. Application of TDM strategies that could lead to vehicle trip reduction and increased use of non-automobile modes include, but are not limited to:

- Implementation of a detailed TDM program for residents and employees managed by a TDM coordinator who would organize and coordinate monitoring efforts, parking and traffic management plans, and the implementation of TDM and recommendations and modifications.
- Provision of a transportation kiosk and on-line portal for information on ridesharing, transit, bicycling, walking, and options for accessing the site without using a private automobile.
- Partial or fully subsidized transit passes for on-site employees and residents.
- Provision of bicycle racks adjacent to commercial development, at communal open space, and residential buildings within the project site.
- Improving bicycle and pedestrian facilities along Honoapiilani Highway to improve connections to local destinations or transit stations.
- Provision of shared micromobility devices (e.g., bicycles, e-bikes, and scooters) and/or car share

In addition to reducing overall vehicle trip generation and vehicle miles of travel (VMT), maximizing travel mode options will allow some residents and employees to live car-free or at least minimize the need for a second vehicle among couples and families.

# PRELIMINARY INFRASTRUCTURE ANALYSIS REPORT FOR DHHL HONOKOWAI MASTER PLAN T.M.K.s: (2) 4-4-001:015 and (2) 4-4-002:003, 008, 009, 011, 015, 018 & 038

### 1.0 INTRODUCTION

The Department of Hawaiian Home Lands (DHHL) manages the Hawaiian Home Lands trust to develop and deliver land to native Hawaiians.

The DHHL's Honokowai parcels are identified as T.M.K.: (2) 4-4-001:015 and T.M.K.: (2) 4-4-002:003, 008, 009, 011, 015, 018 and 038 encompassing a total area of approximately 800 acres. The project site is primarily undeveloped with the Department of Water Supply's (DWS) Mahinahina Water Treatment Plant and reservoir located at the northeastern end of the property. The DWS 2.0 million-gallon Honokowai tank is also located on the property. The DHHL lands are located immediately to the east of Honoapiilani Highway and approximately one-half mile to the south of the Kapalua West Maui Airport (see Exhibit 2).

The master planning process will assist with the development of a subsistence agricultural homestead community for its beneficiaries. The process includes a thorough analysis of site conditions, cultural resources, assessment of infrastructure capacity, and beneficiary and community outreach.

# 2.0 EXISTING INFRASTRUCTURE

### 2.1 <u>ROADWAYS</u>

The major roadway in the vicinity of the DHHL lands is Honoapiilani Highway. It serves as the major arterial between Lahaina and Kapalua. In the vicinity of the project site, the Honoapiilani Highway is a two-way, two-lane north-south roadway. Three phases of the Honoapiilani Highway Realignment project, also known as the Lahaina Bypass Highway, (Phases 1A, 1B-1 and 1B-2) have been completed. The realignment begins south of the Launiupoko Wayside Park and terminates at Keawe Street where it intersects Honoapiilani Highway near the Lahaina Cannery Mall.

Adjacent roadways include Akahele Street to the north and Lower Honoapiilani Road to the south. The intersections of both roadways at Honoapiilani Highway are signalized. The western terminus of Akahele Street is Lower Honoapiilani Road and the eastern terminus is the Kapalua West Maui Airport. Lower Honoapiilani Road begins at Honoapiilani Highway immediately to the west of the Lahaina Wastewater Reclamation Facility (LWWTF) and its terminus is to the north at the Kapalua Resort. It serves the residential and commercial areas makai of Honoapiilani Highway.

There is an existing cane haul road parallel to and mauka of Honoapiilani Highway which traverses along the western boundary of the DHHL lands. Access to the cane haul road from the north is from Akahele Street and from a roadway on the northern side of the LWWTF. A well-graded dirt road starts from the cane haul road at the western boundary and traverses parallel to the northern boundary line and terminates at the eastern boundary adjacent to the DWS reservoir at the Mahinahina Water Treatment Plant (MWTP). This dirt road is the primary access to the MWTP.

### 2.2 DRAINAGE

Elevations on the site range from approximately 740 feet above mean sea along the eastern boundary of the site to approximately 40 feet above mean sea level at the western boundary, with an average slope of approximately 6.6%.

Honokowai Stream traverses through the DHHL lands in an east to west direction. An unnamed gulch traverses along the southern boundary of the DHHL properties and intersects Honokowai Stream near the southwestern corner. Approximately 30 percent of the northern section of the DHHL lands

sheet flows toward and onto Honoapiilani Highway and the southern 70 percent of the project site sheet flows into the unnamed Gulch and Honokowai Stream.

In the early 1990's, the County of Maui and the United States Department of Agriculture, Soil Conservation Services, completed the Honokowai Channel project. It consisted of a sedimentation basin, spillway, concrete box culverts and concrete channel near the southwest corner of the DHHL lands. It crosses Honoapiilani Highway at the Honokowai Bridge and continues downstream in a concrete channel. A triple 11'-6" wide x 12'-7" high concrete box culvert was installed under Lower Honoapiilani Road, which connected to an existing concrete channel to the ocean. According to the Design Report, dated February 28, 1992, the concrete channel structure was designed to accommodate 7,972 cfs.

According to Panel Numbers 150003 0351F and 150003 0352E of the Flood Insurance Rate Map, prepared by the United States Federal Emergency Management Agency, with a FIRM Index date of November 4, 2015, the majority of the project site is situated in Flood Zone X, which represents areas outside the 0.2% annual chance floodplain. The lower reaches of Honokowai Stream are in Flood Zones A and AEF (see Exhibits 4A to 4H). Flood Zone A represents a zone where no Base Flood Elevation (BFE) has been determined and Flood Zone AEF represents a floodway in the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

According to the "Soil Survey Database for Island of Maui, Hawaii (September 2014)," prepared by the United States Department of Agriculture Natural Resources Conservation Service, the majority of the soils within the project site are classified as Lahaina silty clay, 3 to 7 percent slopes (LaB), Lahaina silty clay, 7 to 15 percent slopes, Kahana silty clay, 3 to 7 percent slopes (KbB) and Kahana silty clay, 7 to 15 percent slopes (KbC). A small portion of the land along Honokowai Stream, near the southwest corner of the property is classified as Ewa silty clay loam, 0 to 3 percent slope (EaA). A sliver of the

land along the lower southern boundary is classified as Molokai silty clay loam, 3 to 7 percent slopes (MuB) and Molokai silty clay loam, 7 to 15 percent slopes (MuC). Within Honokowai Stream and the unnamed gulch, the soils are classified as rough broken and stony land (rRS) and rock land (rRK).

Ewa silty clay loam, 0 to 3 percent slopes is characterized as having very slow runoff and no more than a slight erosion hazard. Lahaina silty clay, 3 to 7 percent slopes is characterized as having moderate permeability, slow runoff and a slight erosion hazard. Lahaina silty clay, 7 to 15 percent slopes is characterized as having medium runoff and a moderate erosion hazard. Molokai silty clay loam, 3 to 7 percent slopes is characterized as having slow to medium runoff and a slight to moderate erosion hazard. Molokai silty clay loam, 7 to 15 percent slopes is characterized as having medium runoff and a moderate erosion hazard. Kahana silty clay, 3 to 7 percent slopes and 7 to 15 percent slopes is characterized as having moderately rapid permeability, slow to medium runoff and a slight to moderate erosion hazard. Rough broken and stony land consists of very steep, stony gulches. Runoff is rapid and geologic erosion is active. Rock land is made up of areas where exposed rock covers 25 to 90 percent of the surface. The rock outcrops and very shallow soils are the main characteristics.

### 2.3 SEWER

The LWWTF collects and treats wastewater from Puamana to Kapalua. Its design capacity is 9.0 million gallons per day (mgd) and currently treats about 4.0 mgd of wastewater. Presently, it has the capacity to accommodate the wastewater generated from the development of the DHHL project.

The treated effluent from the LWWTF is of R-1 quality. Of the 4.0 mgd of treated wastewater, approximately 600,000 gallons per day (gpd) during the wet season and 2.0 mgd during the dry season of the R-1 water is transmitted to existing recycled water users. The R-1 water that is not recycled is disposed of through injection wells. Currently, there is approximately 2.0 mgd of R-1 water available.

The County has an existing wastewater transmission line easement along the northern side of Honokowai Stream. Within the easement area, there is a 20-inch transmission force main that can be used to deliver R-1 water to the Honokowai Reservoir and the DLNR Upper Reservoir site. The County is in the design stage of renovating these R-1 facilities to become the core storage and distribution components in its recycled water network.

### 2.4 <u>WATER</u>

The County of Maui currently operates the MWTF, located near the northeast corner of the DHHL properties at an elevation of approximately 650 feet. It is a surface water treatment plant and the County has an agreement to withdraw up to 5.0 mgd from the Honokohau/Honolua Ditch system. The MWTF has a design capacity of 3.2 mgd and is producing an average of 3.0 mgd.

There is a 16-inch waterline from the MWTF that feeds the 2.0 million-gallon DWS Honokowai Reservoir at an elevation of 250 feet. The uppermost service area from the DWS Honokowai Reservoir is the 150-foot elevation. A 20-inch waterline runs from the Honokowai reservoir to Honoapiilani Highway, where it reduces to a 16-inch waterline at Lower Honoapiilani Road.

An alternative non-potable water source is the R-1 treated wastewater from the LWWRF. Recycled wastewater treated to the R-1 level can be used for golf course irrigation, landscape irrigation and food crops. The LWWRF treatment process is constructed to treat 100 percent of its effluent to R-1 quality standards. In accordance with a 2011 Consent Agreement with the Environmental Protection Agency (EPA), effluent that is discharged into the existing injection wells for disposal must meet R-1 quality. If the County experiences a treatment issue and is unable to produce R-1 quality water, users are contacted, and the water is diverted into the injection wells and reported to the EPA.

The County of Maui Department of Environmental Management (DEM) has an existing pipeline that connects to the County of Maui's Honokowai Reservoir at an elevation of approximately 300 feet above mean sea level. There is also

an existing pipeline from the Honokowai Reservoir to the Upper DLNR Reservoir (Field 140 Reservoir), which is located to the east of the DHHL lands.

The County's reuse system extends from the LWWRF to the DLNR Reservoir at an elevation of approximately 700 feet above mean sea level. The system was modified in 2002 to provide water to the Honokowai Reservoir as part of the 1999 Consent Decree between the EPA, Department of Health and the County of Maui. The R-1 pipeline is a ductile iron pipe and is located within an easement dedicated to the County by the State through Executive Order No. 3206. In the mid 2000's the large pump that conveyed water to the DLNR Reservoir was removed from the manifold as there were no R-1 users for water at this location and water was required in the Kaanapali area. It was determined that the pipeline was in good condition, however the gaskets at the pipe joints were questionable.

# 2.5 ELECTRIC

There are three existing 69-kV overhead utility distribution systems from the Maalaea Power Plant that service the West Maui area. There are overhead electrical lines on the east side of Honoapiilani Highway that crosses to the west side fronting the DHHL properties.

There are onsite overhead electrical lines that traverse through the project site.

# 3.0 ANTICIPATED INFRASTRUCTURE IMPROVEMENTS

### 3.1 ROADWAYS

According to the State Department of Transportation (SDOT), monies have been identified for the next phase (Phase 1C) of the Lahaina Bypass Highway. Phase 1C covers the section between Keawe Street and the Kaanapali Connector. However, some in the West Maui community are advocating for the Highway realignment to the south. This will relocate the existing connection to Honoapiilani Highway further south to the Ukumehame area. The SDOT will make a final decision on the next phase of the Bypass Highway in the next few months.

Phase 1D of the Bypass Highway is the section between Puukolii Road, through DHHL lands and ending at the northern terminus at Honoapiilani Highway. However, this phase may not be constructed for many years. Due to the uncertainty of the timing of this section of the Bypass Highway, Phase 1D will not be considered in this report.

SDOT requires future intersections with Honoapiilani Highway be separated by at least a quarter mile. For master planning purposes, the SDOT concurs with the two access points shown on the master plan. Coordination for highway access should be done with the nearby Pulelehua project. Approval for the final roadway intersections at Honoapiilani Highway will need to be reviewed and approved by the SDOT Right-of-Way Branch. The SDOT will require a traffic impact analysis report to determine the improvements required at each intersection with Honoapiilani Highway to support the proposed project.

The Roadway Classification Table below outlines the County of Maui standards for various roadway classifications.

ROADWAY	RIGHT-OF-WAY	PAVEMENT	PAVEMENT
CLASSIFICATION	WIDTH (MIN.)	WIDTH (MIN.)	STRUCTURE*
Major Arterial	80 Ft.	56 Ft.	Class "A"
Major Collector	60 Ft.	44 Ft.	Class "A"
Minor Urban Street	48 Ft.	28 Ft.	Class "B"
Minor Rural Street	40 Ft.	22 Ft.	Class "C"

**ROADWAY CLASSIFICATION TABLE** 

\* The pavement structures listed below are the minimum. Modified pavement structures submitted by a licensed Soils Engineer will be considered.

Class "A" 2-1/2" asphalt concrete

- 5" asphalt treated base
- 8" subbase

Curbed median island Concrete curb & gutters Concrete sidewalks on both sides of street

- Class "B" 2-1/2" asphalt concrete 4" asphalt treated base 6" subbase Concrete curb & gutters Concrete sidewalks on both sides of street
- Class "C" 2" asphalt concrete 6" base course Grassed swales in shoulders

# 3.2 DRAINAGE

In accordance with Chapter 4, "Rules for the Design of Storm Drainage Facilities in the County of Maui", drainage areas greater than 100 acres and all streams, the Natural Resources Conservation Service (NRCS, formerly Soil Conservation Service) hydrograph method shall be used, with a recurrence interval of 100 years based on a 24-hour storm.

The drainage intent for the project is to limit the need for extensive grading as much as possible and to minimize the alteration of the existing drainage pattern. Development of the project will include the implementation of site-specific best management practices (BMPs) during construction to provide erosion control and minimize impacts to surrounding properties. BMPs may include, but are not limited to:

- 1. Prevention of cement products, oil, fuel, and other toxic substances from falling or leaching into the water.
- 2. Prompt and proper disposal of all loosened and excavated soil and debris material from drainage structure work.
- 3. Retention of ground cover until the latest possible date.
- 4. Stabilization of graded areas by sodding or planting as soon as possible.
- 5. Early construction of drainage features.

6. Minimize time of construction.

It is estimated that the existing runoff from a 100-year, 24-hour storm from the project site is 781 cfs, generating a volume of 9,601,148 cubic feet (220.4 acre-feet). Approximately 70 percent of the onsite runoff sheet flows into an unnamed gulch or Honokowai Stream. The unnamed gulch intersects Honokowai Stream within the DHHL property and runoff from both discharge into the Honokowai Basin. The runoff at the Honokowai Basin is stored and eventually overtops an existing spillway into a drainage channel which discharges into the ocean to the west of the DHHL properties.

After development of the proposed project, the runoff from the 100-year, 24-hour storm is estimated to be 1,452 cfs with a volume of 13,476,716 cubic feet (309.4 acre-feet), an increase of 671 cfs and 3,875,568 cubic feet (89 acre-feet). To maintain the existing drainage patterns, it is proposed that the area designated for homestead subsistence ag lots (1 to 2 acres) use grassed roadway and lot swales as the major drainage component. The roadway swales will traverse between lots and discharge into the unnamed gulch or Honokowai Stream, as it is presently doing (see Exhibits 15, 19 and 23).

The parcels designated for multi-family, parks, commercial and industrial development will be required to mitigate the increase in runoff from a 50-year, 1-hour storm within the designated project sites. Runoff in excess of this recurrence interval will be conveyed to the master drainage system provided along the common roadways.

# 3.3 <u>SEWER</u>

The County of Maui has recently completed a \$45 million upgrade to the LWWTF. The County is now in the process of renovating the Honokowai Reservoir to become a R-1 recycled water storage and distribution reservoir and upgrading its reuse pump station and force main to deliver water to the reservoir in order to expand its reuse network and customer base.

Presently, the LWWTF has capacity available to accommodate the wastewater generated from the DHHL project. Due to the terrain and drainageways on the DHHL lands, an onsite sewer lift station will be required to transport the wastewater generated from the DHHL project to the LWWTF.

DHHL should explore the option of using individual wastewater systems (IWS) for the 1 to 2-acre agricultural lots. Currently, the Department of Health regulations include a 50-lot maximum for the use of IWSs. If public benefit can be shown, a variance may be allowed. Lots with a minimum size of one acre can utilize an IWS, however, only one dwelling is allowed on the lot. The estimated cost for the installation of an IWS is \$15,000.

The DEM has \$13.5 million budgeted for improvements to its R-1 transmission system. Improvements include purchasing Maui Land and Pine's (MLP) 2 million-gallon mid-level reservoir located on TMK: (2) 4-4-002:019, which is located approximately in the middle of the DHHL lands (see Exhibit 8). The DEM anticipates installing a cover over the reservoir to minimize evaporation. The acquisition and improvements to the reservoir is estimated to be completed in the first half of 2020. Thereafter, R-1 water will be available to DHHL recycled water users makai of the 2 million-gallon reservoir.

The DEM plans on building a second pipeline to the 300 feet reservoir as part of its expansion project and it is being designed. The old line to the 300 feet elevation will be rehabilitated after the second line is constructed. The next phase will include the installation of a pump station at the 300 feet reservoir to send water to the 700 feet reservoir. A similar process with force mains will also be incorporated. The DEM would like to coordinate the easement requirements with DHHL to slightly widen the existing easements to accommodate the second pipelines. It would be preferable to build an access and maintenance roadway over the lines for maintenance access, demarcation of the location of the lines and avoiding accidental breakages due to grading or other construction.

The DEM intends to acquire the DLNR Upper Reservoir within 2 years. The reservoir is located on TMK: (2) 4-4-004:012, which is owned by the State and

the reservoir is maintained by the Department of Land and Natural Resources. The reservoir site is immediately mauka (east) of the DHHL properties. The reservoir is not lined and subject to loss of water through seepage.

Once the reservoir is acquired and upgraded, the R-1 water would be mixed with ditch water. Existing and future recycled water users will receive the mixed water through the existing R-1 pipelines and ditch system.

The County will fund and construct the system's regional infrastructure. DHHL will be required to develop the onsite infrastructure to provide service to its beneficiaries. DHHL will be responsible to operate and maintain its onsite wastewater system.

With population growth in West Maui, the increase in wastewater treatment will produce a corresponding increase in the R-1 water supply. In the future, the County may consider upsizing the R-1 transmission line from the LWWTF to the LDNR Upper Reservoir increase its capacity from 2 mgd to 9 mgd.

The DEM is interested in supplying R-1 water to the DHHL lands. Due to the proximity of the properties to the LWWTF and existing R-1 facilities, it would be more cost effective to provide R-1 water to DHHL. According to the DEM, there are other landowners interested in utilizing the County's R-1 water. Distribution of available R-1 water will be on a first come, first serve basis until there is no supply available.

Based on the information provided to DHHL from the Commission on Water Resource Management (CWRM), the estimated irrigation demand in the Honokowai area is 4,900 gallons per acre per day. The three land use alternatives being considered range between 347 and 451 acres for subsistence agriculture. R-1 water can be used for irrigation purposes. The probable R-1 demand for the agricultural lots would be between 1.7 to 2.2 million gallons per day.

The current surplus could meet the higher range of the probable R-1 demand. However, R-1 water has high salinity that may limit the type of crops that could
be supported. An option is to blend the R-1 water with ditch water to reduce the salinity to improve the viability for agricultural purposes.

## 3.4 <u>WATER</u>

DHHL is working with the DWS to generate an intergovernmental agreement to use the existing Honokowai Well as a potable water source. The proposed project includes source, storage and transmission improvements from the Honokowai Well site to the MWTF site.

CWRM has established a sustainable yield of 6 million gallons a day for the Honokowai aquifer. A 700 gpm pump was installed in the well, which has an installed capacity of 1.0 mgd. Based on an operational schedule of 16 hours pumping over a 24-hour period, the maximum reliable capacity of the well is 448,000 gpd. Pumpage from the well will be within the Honokowai aquifer's sustainable yield.

The DWS is requesting a perpetual land use license for the continued operation and future expansion of the existing MWTP. Through negotiations with the DWS, a 200,000 gpd allocation of potable water will be provided to the DHHL. The DWS will provide a 5/8-inch water meter to each lot. Based on a water consumption of 600 gpd, the allocation could support approximately 330 single family units. The 200,000 gallon allocation is to be used for domestic purposes only. Irrigation demand will be provided by non-potable sources such as R-1 effluent and ditch water.

DHHL proposes improvements to the existing Honokowai Well site and the installation of approximately 8,000 feet of 12-inch transmission waterline to a proposed 100,000-gallon headbreaker tank near the MWTF. The outlet from the headbreaker tank will connect to the existing 16-inch transmission line near the existing 2-million-gallon finish water tank at the MWTF. The existing pump in the Honokowai Well will be replaced with a 700 gpm submersible pump. A new control building is being proposed at the well site, which will be graded to accommodate a potential 500,000-gallon storage tank. DHHL proposes the

source, storage and transmission improvements to support its operation as a potable water source to potentially service the Honokowai lands for future planned agricultural, residential and commercial purposes.

A Water Policy Plan was adopted by the Hawaiian Homes Commission on July 22, 2014. One of the relevant policies is to expressly determine and plan for future water needs and actively participate in broader water management, use and protection efforts in Hawaii in order to secure water.

A State Water Projects Plan was adopted by CWRM in May 2017. It identifies DHHL water needs and calculates potable and non-potable water demands based on DHHL plans. The projected long-term potable water demand (2026 and beyond) for the Honokowai lands is 617,900 gpd. It is proposed that potable water for DHHL be provided by the DWS system.

See Section 3.3 SEWER for possible use of R-1 water as a non-potable water source for the project. See Appendix B for the Potable Water Demand.

## 3.5 ELECTRIC

DHHL will need to work with Maui Electric Company to utilize their existing facilities to service the project.

The DEM may be interested in exploring photovoltaic alternatives to offset the pumping cost for the R-1 water to the upper reservoirs. The DHHL could investigate the option of working with the County of Maui and the DEM on this alternative.

# 4.0 PREFERRED ALTERNATIVE

DHHL selected Alternative C as their preferred alternative and is proposing to develop the project in two phases. The first phase will consist of 56 subsistence agricultural lots and a community use park. The second phase will consist of 38 subsistence agricultural lots, 356 homestead single-family residential lots, one community use agriculture lot, and 3 community use parks.

#### FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND (Note: legend does not correspond with NFHL)

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100year), also know as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHAs include Zone A, AE, AH, AO, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.	
	Zone AE: BFE determined.	
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.	
	<b>Zone AO</b> : Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.	
	Zone V: Coastal flood zone with velocity hazard (wave action); no BFE determined.	
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.	
	<b>Zone AEF:</b> Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.	
NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.		
	<b>Zone XS (X shaded)</b> : Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.	
	<b>Zone X</b> : Areas determined to be outside the 0.2% annual chance floodplain.	
OTHER FLOOD AREAS		

**Zone D**: Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase apply, but coverage is available in participating communities.

HYDROLOGIC CALCULATIONS

#### **Hydrologic Calculations**

Purpose: Determine the increase in onsite surface runoff due to the development of the project site based on a 100-year, 24-hour storm.

A. Determine the 100-year, 24-hour rainfall:

 $I_{100} = 12.0$  inches

- C. Drainage Area (A) = 800 Acres
- D. Compute the 100-year, 24-hour storm runoff volume (see attached hydrographs).

Q(existing) = 781 cfs

Q(developed) = 1,452 cfs

The increase in runoff due to the proposed development is 1,452 cfs - 781 cfs = 671 cfs. The increase in runoff volume due to the proposed development is 13,476,716 cubic feet - 9,601,148 cubic feet = 3,875,568 cubic feet.

### PRELIMINARY DRAINAGE REPORT FOR DHHL HONOKOWAI MASTER PLAN T.M.K.s: (2) 4-4-001:015 and (2) 4-4-002:003, 008, 009, 011, 015, 018 & 038

#### I. INTRODUCTION

The purpose of this report is to examine both the existing and proposed drainage conditions for the proposed project.

The Department of Hawaiian Home Lands (DHHL) manages the Hawaiian Home Lands trust to develop and deliver land to native Hawaiians. As part of their master planning process, three alternatives are being considered for the potential development of their Honokowai properties. Alternative C is the alternative being evaluated for the purposes of the EA.

#### II. SITE LOCATION AND PROJECT DESCRIPTION

The DHHL's Honokowai parcels are identified as T.M.K.: (2) 4-4-001:015 and T.M.K.: (2) 4-4-002:003, 008, 009, 011, 015, 018 and 038 encompassing a total area of approximately 800 acres. The project site is primarily undeveloped with the Department of Water Supply's (DWS) Mahinahina Water Treatment Plant and reservoir located at the northeastern end of the property. The DWS 2.0 million-gallon Honokowai tank is also located on the property. The DHHL lands are located immediately to the east of Honoapiilani Highway and approximately one-half mile to the south of the Kapalua West Maui Airport (see Exhibit 2).

#### III. EXISTING TOPOGRAPHY AND SOIL CONDITIONS

Elevations on the site range from approximately 740 feet above mean sea along the eastern boundary of the site to approximately 40 feet above mean sea level at the western boundary, with an average slope of approximately 6.6%.

According to the "Soil Survey Database for Island of Maui, Hawaii (September 2014)," prepared by the United States Department of Agriculture Natural Resources Conservation Service, the majority of the soils within the project site are classified as Lahaina silty clay, 3 to 7 percent slopes (LaB), Lahaina silty clay, 7 to 15 percent slopes, Kahana silty clay, 3 to 7 percent slopes (KbB) and Kahana silty clay, 7 to 15 percent slopes (KbC). A small portion of the land along Honokowai Stream, near the southwest corner of the property is classified as Ewa silty clay loam, 0 to 3 percent slope (EaA). A sliver of the land along the lower southern boundary is classified as Molokai silty clay loam, 3 to 7 percent slopes (MuB) and Molokai silty clay loam, 7 to 15 percent slopes (MuC). Within Honokowai Stream and the unnamed gulch, the soils are classified as rough broken and stony land (rRS) and rock land (rRK).

Ewa silty clay loam, 0 to 3 percent slopes is characterized as having very slow runoff and no more than a slight erosion hazard. Lahaina silty clay, 3 to 7 percent slopes is characterized as having moderate permeability, slow runoff and a slight erosion hazard. Lahaina silty clay, 7 to 15 percent slopes is characterized as having medium runoff and a moderate erosion hazard. Molokai silty clay loam, 3 to 7 percent slopes is characterized as having slow to medium runoff and a slight to moderate erosion hazard. Molokai silty clay loam, 7 to 15 percent slopes is characterized as having medium runoff and a moderate erosion hazard. Kahana silty clay, 3 to 7 percent slopes and 7 to 15 percent slopes is characterized as having moderately rapid permeability, slow to medium runoff and a slight to moderate erosion hazard. Rough broken and stony land consists of very steep, stony gulches. Runoff is rapid and geologic erosion is active. Rock land is made up of areas where exposed rock covers 25 to 90 percent of the surface. The rock outcrops and very shallow soils are the main characteristics.

#### IV. EXISTING DRAINAGE CONDITIONS

Honokowai Stream traverses through the DHHL lands in an east to west direction. An unnamed gulch traverses along the southern boundary of the DHHL properties and intersects Honokowai Stream near the southwestern corner. Approximately 30 percent of the northern section of the DHHL lands sheet flows toward and onto Honoapiilani Highway and the southern 70 percent of the project site sheet flows into the unnamed Gulch and Honokowai Stream.

In the early 1990's, the County of Maui and the United States Department of Agriculture, Soil Conservation Services, completed the Honokowai Channel project. It consisted of a sedimentation basin, spillway, concrete box culverts and concrete channel near the southwest corner of the DHHL lands. It crosses Honoapiilani Highway at the Honokowai Bridge and continues downstream in a concrete channel. A triple 11'-6" wide x 12'-7" high concrete box culvert was installed under Lower Honoapiilani Road, which connected to an existing concrete channel to the ocean. According to the Design Report, dated February 28, 1992, the concrete channel structure was designed to accommodate 7,972 cfs.

It is estimated that the existing runoff from a 100-year, 24-hour storm from the project site is 781 cfs, generating a volume of 9,601,148 cubic feet (220.4 acre-feet). Approximately 70 percent of the onsite runoff sheet flows into an unnamed gulch or Honokowai Stream. The unnamed gulch intersects Honokowai Stream within the DHHL property and runoff from both discharge into the Honokowai Basin. The runoff at the Honokowai Basin is stored and eventually overtops an existing spillway into a drainage channel which discharges into the ocean to the west of the DHHL properties.

#### V. FLOOD AND TSUNAMI ZONE

According to Panel Numbers 150003 0351F and 150003 0352E of the Flood Insurance Rate Map, prepared by the United States Federal Emergency Management Agency, with a FIRM Index date of November 4, 2015, the majority of the project site is situated in Flood Zone X, which represents areas outside the 0.2% annual chance floodplain. The lower reaches of Honokowai Stream are in Flood Zones A and AEF (see Exhibits 4A to 4I). Flood Zone A represents a zone where no Base Flood Elevation (BFE) has been determined and Flood Zone AEF represents a floodway in the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

#### VI. PROPOSED DRAINAGE PLAN

In accordance with Chapter 4, "Rules for the Design of Storm Drainage Facilities in the County of Maui", drainage areas greater than 100 acres and all streams, the Natural Resources Conservation Service (NRCS, formerly Soil Conservation Service) hydrograph method shall be used, with a recurrence interval of 100 years based on a 24-hour storm.

The drainage intent for the project is to limit the need for extensive grading as much as possible and to minimize the alteration of the existing drainage pattern. Development of the project will include the implementation of sitespecific best management practices (BMPs) during construction to provide erosion control and minimize impacts to surrounding properties. BMPs may include, but are not limited to:

- 1. Prevention of cement products, oil, fuel, and other toxic substances from falling or leaching into the water.
- 2. Prompt and proper disposal of all loosened and excavated soil and debris material from drainage structure work.
- 3. Retention of ground cover until the latest possible date.
- 4. Stabilization of graded areas by sodding or planting as soon as possible.
- 5. Early construction of drainage features.
- 6. Minimize time of construction.

It is estimated that the existing runoff from a 100-year, 24-hour storm from the project site is 781 cfs, generating a volume of 9,601,148 cubic feet (220.4 acrefeet). Approximately 70 percent of the onsite runoff sheet flows into an unnamed gulch or Honokowai Stream. The unnamed gulch intersects Honokowai Stream within the DHHL property and runoff from both discharge into the Honokowai Basin. The runoff at the Honokowai Basin is stored and eventually overtops an existing spillway into a drainage channel which discharges into the ocean to the west of the DHHL properties.

After development of the proposed project, the runoff from the 100-year, 24hour storm is estimated to be 1,452 cfs with a volume of 13,476,716 cubic feet (309.4 acre-feet), an increase of 671 cfs and 3,875,568 cubic feet (89 acrefeet). To maintain the existing drainage patterns, it is proposed that the area designated for homestead subsistence ag lots (1 to 2 acres) use grassed roadway and lot swales as the major drainage component. The roadway swales will traverse between lots and discharge into the unnamed gulch or Honokowai Stream, as it is presently doing (see Exhibit 1). Retention basins will be constructed within the existing drainageways with volume in excess of the increase in runoff from the 100-year, 24-hour storm.

The parcels designated for multi-family, parks, commercial and industrial development will be required to mitigate the increase in runoff from a 50-year, 1-hour storm within the designated project sites. Runoff in excess of this recurrence interval will be conveyed to the master drainage system provided along the common roadways.

#### VII. <u>HYDROLOGIC CALCULATIONS</u>

The hydrologic calculations are based on the "Rules for the Design of Storm Drainage Facilities in the County of Maui," and the "Rainfall Frequency Atlas of the Hawaiian Islands," Technical Paper No. 43, U.S. Department of Commerce, Weather Bureau. drainage areas greater than 100 acres and all streams, the Natural Resources Conservation Service (NRCS, formerly Soil Conservation Service) hydrograph method shall be used, with a recurrence interval of 100 years based on a 24hour storm.

See Appendix A for Hydrologic Calculations

#### VIII. <u>CONCLUSION</u>

After development of the proposed project, there will be an increase of 671 cfs and 3,875,568 cubic feet (89 acre-feet). To maintain the existing drainage patterns, it is proposed that the area designated for homestead subsistence ag lots (1 to 2 acres) use grassed roadway and lot swales as the major drainage component. Retention basins will be constructed within the drainageways with a total storage volume exceeding 3,875,568 cubic feet. The retention basins will provide storage volume to reduce runoff flowing out of Honokowai Stream into the ocean.

Therefore, it is our professional opinion that the proposed development will not have an adverse effect on the adjoining or downstream properties.

APPENDIX A

HYDROLOGIC AND HYDRAULIC CALCULATIONS

#### **APPENDIX A**

#### HYDROLOGIC CALCULATIONS

#### Hydrologic Calculations

#### Hydrologic Calculations

Purpose: Determine the increase in onsite surface runoff due to the development of the project site based on a 100-year, 24-hour storm.

A. Determine the 100-year, 24-hour rainfall:

 $I_{100} = 12.0$  inches

C. Drainage Area (A) = 800 Acres

D. Compute the 100-year, 24-hour storm runoff volume (see attached hydrographs).

Q(existing) = 781 cfs

Q(developed) = 1,452 cfs

The increase in runoff due to the proposed development is 1,452 cfs - 781 cfs = 671 cfs. The increase in runoff volume due to the proposed development is 13,476,716 cubic feet - 9,601,148 cubic feet = 3,875,568 cubic feet.

If this map has been identified as PRELIMINARY, please note that it is being provided for informational purposes and is not to be used for flood insurance rating. Contact your county floodplain manager for flood zone determinations to be used for compliance with local floodplain management regulations.

### FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND (Note: legend does not correspond with NFHL)

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100-year), also know as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHA is include Zone A, AF, AH, AO, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.
	Zone AE: BFE determined.
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.
	<b>Zone AO</b> : Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.
	<b>Zone V</b> : Coastal flood zone with velocity hazard (wave action); no BFE determined.
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.
	<b>Zone AEF:</b> Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.
NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.	
	Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
	<b>Zone X</b> : Areas determined to be outside the 0.2% annual chance floodplain.
OTHER FLOOD AREAS	
	Zone D: Unstudied areas where flood hazards are undeter- mined, but flooding is possible. No mandatory flood insurance

nities.

1 Alternate C - Proposed Drainage System Map

APPENDIX A

HYDROLOGIC AND HYDRAULIC CALCULATIONS

# APPENDIX A

# HYDROLOGIC CALCULATIONS

# Hydrologic Calculations

# Hydrologic Calculations

Purpose: Determine the increase in onsite surface runoff due to the development of the project site based on a 100-year, 24-hour storm.

A. Determine the 100-year, 24-hour rainfall:

 $I_{100} = 12.0$  inches

C. Drainage Area (A) = 800 Acres

D. Compute the 100-year, 24-hour storm runoff volume (see attached hydrographs).

Q(existing) = 781 cfs

Q(developed) = 1,452 cfs

The increase in runoff due to the proposed development is 1,452 cfs - 781 cfs = 671 cfs. The increase in runoff volume due to the proposed development is 13,476,716 cubic feet - 9,601,148 cubic feet = 3,875,568 cubic feet.

DAVID Y, IGE GOVERNOR STATE OF HAWAH JOSH GREEN 1.1, GOVERNOR 1.1, GOVERNOR STATE OF HAWAH

WILLIAM J. AILA, JR CIARSON HAWAILAN HOMES CORDUSING

> STATE OF HAWAII DEPARTMENT OF HAWAIIAN HOME LANDS PORTICIALIA INVALIT 8005 HOBOLULU INVALI 8005

September 9, 2019

Aloha!

The Department of Hawaiian Home Lands is updating our Honokōwai Master Plan to develop agriculture homeseteads. Please join us at the first beneficiary planning meeting for Honokōwai which will be held at:

Lahaina Civic Center 1840 Honoapiilani Hwy, Lahaina Main Meeting Room Wednesday, September 25, 2019 6:00 p.m. to 8:00 p.m. Our staff and consultants will explain why we are updating our Honokōwai Master Plan and there will be opportunities to provide your mana'o on important issues like: lot size, agricultural support, community spaces, rural infrastructure development, among other planning issues that we are looking for beneficiary input. Please note that this is NOT an award notice, but an opportunity for you and your 'ohana to inform and influence how DHHL develops homesteads on its Honokôwai lands. Bring your 'ohana to the meeting so everyone can get information about the project, share their ideas, and be a part of creating Maui's new Agricultural Hawaiian Homestead community.

The Department is involving beneficiaries early in the planning process and we hope you will take advantage of this opportunity!

Mahalo,

Hawaiian Homes Commission William J. Aila, Jr., Chairman

Do you support having some larger agricultural lots within the homestead 12. Cooperative Farming

community where homesteaders can work together and collaborate to grow and raise food in a more cooperative environment? YesNoUnsure

contributions. The remaining questions are open ended. Please write as much or as little as DHHL values you. Everyone contributes to the well-being and growth of a community. We want to find out a little more about what makes you unique based on experiences, and you want to capture the essence of you.

13. What are you passionate about?

14. How would you describe your ideal community?

15. Many occupations develop a set of skills that are helpful in farming. You may have skills helpful in a new farming community (examples, carpenter, mechanic, plumber, lawyer, accountant, sales, etc.).

What do you have to offer the community we are creating in Honokowai? What real world experiences do you have? 16. Please use the space below to share anything else that you think will help us as we plan the land uses in Honokōwai.

Mahalo for your time!

page 4 of 4

Honokōwai Agriculture Applicant Survey

# **PURPOSE OF THIS MEETING**

- To give you information about Honokōwai
- To give you information about a new type of Small-Lot Agricultural homestead lease
- To involve beneficiaries early in the planning process – to envision and create a new homestead community at Honokōwai.

# GOAL of this PROJECT

- At the end of 3 beneficiary planning meetings, we'll have a updated development master plan.
- We will prepare an Environmental Assessment at the same time.
- We can work together to lobby funding for the project.

# **MEETING AGENDA**

- . A Look at Honokōwai Today
- Building our Knowledge Base:
- A. 2004 Honokōwai Master Plan--Mana'o of a beneficiary-driven plan
  - B. Changes Since 2004—the need to update the PlanC. The Maui Ag Wait List—who are we planning for?
    - D. Site Assessment—Developable Lands
- III. Your Mana'o -- Focused Small Group Work
  - A. Lot Size and Lot ConfigurationB. "Rural" Infrastructure
    - B. Kural IntrastructureC. Community Spaces
- D. The Ag Homestead Lease, Transfers and Succession
  - IV. Next Steps and Closing Notes

4. Looking makai across the subject property from the vicinity of the DWS water tank

9/25/2019 Honokowai Beneficiary Planning Meeting #1

# Changes Since 2004

- Leiali'i was included in the settlement—75 acres
  - -104 residential lots were awarded in 2007 (Leiali'i IA)
    -250 lots are planned in Leiali'i IB
    - Leiali'i IB needed a water source
- A New Well is being constructed on lands mauka of Honokōwai
   Water credits are available for Honokōwai
- Pulehunui—Regional Infrastructure Master Plan will include small-lot agricultural homesteads

# The Maui AG Waitlist

# • Maui Island Ag Waitlist = 4,722 applicants Who Are We Planning For?

- 788 (17%) already have a lease

  - 4,102 (86%) live in the State of Hawai'i - 3,521 (75%) have filed 2 applications
- The First 500 on Maui's Ag Waitlist
  - 126 (25%) live on Maui
    - 273 (55%) live on 0'ahu
      - - The average age is 67

# <u>Why</u> Agriculture?

- Provision of the HHCA
- 20 years since the last Agricultural Awards
- Sustainability/resilience requires agriculture
- Agricultural Waitlist is now longer than the **Residential Waitlist**
- Maui has only one Ag homestead-65 Lessees

# Small Group Work - 4 Topics

- 1. Lot Size and Lot Configuration
- 2. "Rural" Infrastructure
- 3. Community Spaces
- 4. The Ag Homestead Lease, Transfers and Succession

# MEETING NOTES

# ATTENDANCE Beneficiaries:

The 49 attendees that signed in at the registration table are listed below: Abraham AhHee, Piimauna Anwohi, Daryl Anwohi, Cornelia Applegate, Emily Arcangel, Heidi Bungard, I. Clifford, Kaleo Cullen, Kekoa Enomoto, Blosom Feiteira, Jackie Hala, Louella Hala, H Harris, Aukai Hatchie Jr, Nobuo Higa Sr., Justin Hong, Norma Hussey, Andrew Kaaæt, Thelma Kaahui, Chris Kaahui, June Kaaihue, Shawn Kanae, Lani Kane, Maka Kanekoa, Pam Kaniho, Norman Keahi, Moses Keahi, Kahilifiwa Kipapa, Linda Magalianes, Ike Magalianes, James Marfil, Steven McCabe, Varna Nakihei, Neiznan, Corrine Nobriga, Rod Paahana, Duke Paoa, Kai Pelayo, Lindel Puha, Bernie Sanchez, Lillian Suter, Kala Tanaka, Kamuela Vaca, Jessee Watsoi, Pua Watson, Kapaku, Reina

- DHHL Staff: William Aila- Chairman; Andrew Choy and Julie-Ann Cachola (Planning Office), Stewart Matsunaga (Land Development Division), Paula Aila (Awards Branch), Mona Kapaku and Toni Eaton (Maui District Office)
- DHHL Consultants: Planning Consultants Hawaii, Inc: John Summers and Mike Summers
- Opening Remarks-

Julie-Ann Cachola welcomed attendees to the meeting, noting that all the applicants on the Maui Island Agricultural Waitlist who reside on Maui, were invited to attend. This meeting is the first in a series of planning meetings that will engage beneficiaries in updating the 2004 Honokōwai Master Plan so that small-acreage agricultural homestead leases may be awarded to beneficiaries on the Maui Island Agriculture Waitlist.

The purpose of the meeting is to:

- Provide information about Honokōwai
   Provide information about a new type of Small-Lot Agricultural homestead lease
  - Involve beneficiaries early in the planning process to envision and create a new homestead community at Honoköwai.

The goals of this project are to:

- Conduct 3 beneficiary planning meetings to update the 2004 development master plan;
  - Prepare an Environmental Assessment for the project
     Work together to lobby funding for the project.

- HONOKÓWAI AGRICULTURAL HOMESTEAD COMMUNITY MASTER PLAN PLANNING MEETING #1—MEETING NOTES September 25, 2019 Page 25, 2019
- II. Background Information on Honokōwai: Ms. Cachola shared information to orient participants on the location of the land, significant land features, and current conditions.

Blossom Feiteira, a homestead leader with generational roots in Honokōwai, participated in the planning meetings that created the 2004 Honokōwai Master Plan. Ms. Feiteira explained the planning process, the 2004 land use recommendations, and the rationale behind the land use land use recommendations.

Ms. Cachola presented additional background information, including:

- Key changes that have occurred since 2004 that require an update of the master plan
  - Characteristics of the beneficiaries on the Maui Agricultural Wait List
    - Reasons for DHHL's focus on agricultural homesteads
       A map depicting "developable lands" in Honokōwai
- III. Small Group Planning Discussions:

The chairs that filled the large meeting room for the plenary session were separated into the four corners of the meeting room to create four smaller groups that would allow more people to participate in discussions on the following topics:

- Lot Size
- Lot Configuration
- "Rural" Infrastructure
- Community Spaces
   The Ag Homestead Lease, Transfers and Succession

Two DHHL staff were assigned to each topic area—one to serve as the presenter/facilitator; and the other to serve as the group's recorder. Each small group discussion started with a short 5-minute presentation about the topic area, followed by an open, facilitated discussion. In addition, beneficiaries were given an opportunity to show their preference on a variety of options developed prior to the meeting by placing dots on their preference on a variety of preferred choice was not listed, beneficiaries could write-in that choice. If a participant votes, the write-in itens and comments and points raised in the small group discussions, are summarized below.

- The Small-acreage Agricultural Kuleana Homestead Lease, Transfers and Succession (The discussions on this topic were centered around information about leases, transfers and succession. Group members were provided an opportunity ask questions in a smaller group setting. Questions were written down on chart paper)
- IV. Individual Agriculture Survey-

Attendees were given an agriculture survey to be completed individually. Thirty-six attendees filled out a survey. Survey results are attached.

Next Steps-

Þ.

Ms. Cachola shared with the attendees, DHHL's development process from un-improved land to house construction. The Honokōwai Agricultural Homestead Community Master Plan is currently in the Planning and environmental compliance phase of the process. The Planning Office and its consultants utilized data collected during the Planning Meeting to develop three conceptual master plans. Beneficiaries will have an opportunity to review and comment on these concepts at the next beneficiary consultation meeting scheduled for mid to late January 2020.

Department of Hawaiian Home Lands Beneficiary Consultation Meeting Announcement

Honokōwai Homestead Community Master Plan BENEFICIARY PLANNING MEETING #3

Thursday, November 12, 2020 6:00 pm to 8:00 pm JOIN THE VIRTUAL MEETING ONLINE AT: DHHL.HAWAII.GOV/PO/MAUI/ Alohal It's been awhile since we last met--it's time to re-group! We want to give you an update on the Master Plan. We want to highlight important findings and solidify beneficiary agreement on a preferred land use plan. This is not an awards meeting, but it is an opportunity to determine the general landscape and design of the future Honokōwai homestead. Join the virtual meeting.

Honokōwai Homestead Community Master Plan Beneficiary Consultation Meeting #3

### Honokōwai Homestead Community Master Plan Beneficiary Consultation Meeting #3

seneficiary Consultation Meeting # November 12, 2020 Virtual Meeting via Zoom 6:00 p.m. – 8:00 p.m.

### MEETING NOTES

### ATTENDANCE

- Beneficiaries: The following attendees were identified based on their zoom "participant name"
   Blossom Feiteira, Christi Keliikoa, Duke Paoa, G Tihada, Nora
   Makahanaloa, Puamana, Randy Awo, Shawn Kanae, Tamara Akiki, Maile
   Paltin, Gracey Gomes, Jarrett Kanekoa, Kalei, Kamanu Kahaialii, Kanani
   Higbee, Kaupo 'Ohana, Keaka Mitchell, Kekai, Kekoa Enomoto,
- DHHL Staff: Andrew Choy, Julie-Ann Cachola, Malia Cox (Planning Office), Mona Kapaku and Toni Eaton (Maui District Office)

DHHL Consultants: Planning Consultants Hawaii, Inc: John Summers and Mike Summers

Opening Remarks-

Andrew Choy welcomed attendees to the meeting. This meeting is the third in a series of planning meeting to engage beneficiaries in the process creating a master plan for Honokōwai.

Attendees were asked to sign in by typing their preferred name into the chat box for attendance. In addition, attendees were also asked to indicate in the chat box if they attended a previous Honokôwai meeting. Julie Cachola explained the purpose of the meeting and covered the proposed agenda for the evening.

The purpose of the meeting was to:

- Provide an update on the process
- Collect feedback regarding the preferred plan.
- Background Information on HHCA and DHHL's acquisition of Honoköwai: Ms. Cachola explained why the Hawaiian Homes Commission Act was past and how it was included in the requirements for admission of Statehood. She further explained that the

PO-21-080

page 1 of 4

Honokōwai Homestead Community Master Plan Beneficiary Consultation Meeting #3 original land trust did not include any lands in West Maui. In 1994, Honokōwai was transferred to DHHL as part of a settlement. In 2007, DHHL purchased additional lands in west Maui totaling 76 acres in Leali'i. Overview of planning process and DHHL activities affecting west Maui since the acquisition of Honokōwai:

≡

- a. 2003- DHHL developed a master plan for Honokōwai.
  - b. 2004-the Maui Island plan developed for Honokōwai.
- 2007- Circ made isonal prantice were provided and involvement.
   2007- 250 residential lots in the pipe at Leali'i, with 104 already awarded
  - d. Only 65 agriculture lots awarded in all of Maui
- IV. Description of lands and surrounding area

Ms. Cachola explained that there are water resources in and around DHHL's Honokōwai lands. She further explained that the water resources within Honokōwai were excluded from DHHL's acquisition of lands in Honokōwai. The Honokōwai lands are split by the very deep Honokōwai gulch. Ms. Cachola described the lands and developments surrounding DHHL's lands. She explained that there may be opportunities to work together with surrounding land owners to synergistically develop the region.

Current Planning Process

DHHL is working with Planning Consultants Hawaii (PCH) in developing a Master Plan for Honokōwai and PBR HAWAWII (PBR) to prepare an environmental assessment. A summary of the studies conducted to date was given by Mr. Choy and Ms. Cachola. A brief synopsis of the previous 2 beneficiary consultation meetings was provided followed by a summary of the proposed preferred alternative.

Discussion

Ę.

Attendees were invited to discuss and engage with the staff regarding the preferred alternative. The following is a summary of the discussion comments.

- A summary of Leali'i should be provided
- Interim dispositions should be considered
- Undivided interest lease- the purpose of it was to help kupuna get a lease so they could
  pass it to the next generation. The idea is creating a legacy. A participant suggested that
  while there were issues with the undivided interest award program, HHC should re-look
  at it. DHHL staff opined that the legislature does not really understand the undivided
  interest but agrees that the program does help protect the bloodline from falling away
  from the trust because the kupuna on the list passes away.

page 2 of 4

Honokōwai Homestead Community Master Plan Beneficiary Consultation Meeting #3

- An ag development/education center is still an opportunity for helping get the beneficiaries on to the land.
- The project should be phased, but agriculture should come first.
- Off-grid campgrounds within the community area should be considered. This could get people on land faster and create a presence to keep interlopers off.
- Multiple participants were concerned that only 21 people attended the meeting. They
  opined that there should be more people involved. This is our island, many kupuna have
  died waiting on the list.
- DHHL asked if it was easier to participate virtually? The participants said yes. DHHL asked if beneficiaries would be open to doing a zoom meeting in the day? Participants indicated that a combo or series of meetings would be work.
- What are the compliance issues? If they refuse to comply, we have the right to remove them. The solutions are there, we need to have community involved.
- A beneficiary opined that many beneficiaries do not want to be involved until the DHHL is ready to move dirt. This beneficiary indicated that she seeks out others to make sure they have information. Leali'f awarded 104 lots, 95 were from Lahaina. Beneficiaries need to do the work and handle the kuleana of getting the beneficiaries to do their work so they can stand in line and be ready to receive a lot.
- The issue is how much money DHHL can get from legislature for CIP. So as a community, beneficiaries need to hui up to make sure they can support projects and get more money
- The issuance of geo-bonds is a concern and should be discussion should be prioritized. The issue will be the debt service. If DHHL gets \$350M, where will DHHL get \$\$ to pay the debt. It seems sad, but the beneficiaries should be involved to choose the projects.
- How can the training part sooner? Would it need infrastructure? It needs to be
  accessible. It needs water. It should be adjacent to an access road. It can use rural
  utilities services grant program. So please, hurry up with the EA so this training project
  can move forward.
- The haves and have nots fight needs to stop. Beneficiaries need to come together as one voice to the legislature.
- Where are the potential affordable housing on Maui? Blossom told the county what projects DHHL has on the books. She noticed Lanai, Hana. Would chair be willing to consider Waikieu (east Maui). DHHL staff indicated that it is on the docket with plans on requesting during the spring of 2021.

VII. Next Steps-

Based on the discussion, the participants indicated the preferred plan was okay if the department put agriculture first or simultaneously with residential in the first phase.

PO-21-080

page 3 of 4

Honokōwai Homestead Community Master Plan Beneficiary Consultation Meeting #3 The next step is to progress and publish the draft EA during first quarter of 2021. If there are not significant comments, then hopefully DHHL can publish the Final EA during the summer of 2021.

Once the EA is complete, the project can move into design, construction, then award.

VIII. The meeting was adjourned at approximately 8 pm.

This is DHHL's understanding of the topics discussed and the conclusions reached.

November 12, 2020 Virtual Meeting on Zoom Meeting will Start at 6:00 PM Meeting will be recorded on posted on the DHHL website

### **Please Sign-In**

Aloha! In the chat, please share: Your preferred name,
 Where you are Zooming in from,

Whether you are a DHHL beneficiary, &
 Why you decided to join us this evening.

Mahalo!

### Zoom Best Practices

### Please:

Keep your camera on & mic muted, Questions during the presentation please type in "Chat"

During the discussion: Use the "raise hand" function to be called on, Just ask (politely) if we miss your virtual hand Use the Chat to enter questions or comments Please be respectful of others Mahalo!

## **PURPOSE OF TONIGHT'S MEETING**

To provide an update on the DHHL Honōkowai planning process and collect beneficiary feedback on the preferred plan alternative.

12/16/2020

### **MEETING AGENDA**

- **Overiew of the Planning Process Findings and Outcomes to** Date (How we arrived at the preferred alternative)
  - A. Summary of feedback from Beneficiary Consultation Meetings #1 & #2
     B. Technical studies and physical site considerations
- **Discussion on Preferred Alternative**
- III. Next Steps in the Planning Process and Beyond

### **Changes Since 2004**

- Leiali'i was included in the settlement—75 acres
  - -104 residential lots were awarded in 2007 (Leiali'i IA) - 250 lots are planned in Leiali'i IB

    - Leiali'i IB needed a water source
- A New Well is being constructed on lands mauka of Honokôwai - Water credits are available for Honokowai
- Pulehunui—Regional Infrastructure Master Plan will include small-lot agricultural homesteads

## **Previous Beneficiary Consultation**

- Beneficiary Consultation Meeting #1 Sept. 25 2019
- Beneficiary Consultation Meeting #2 Feb. 26 2020

## **Previous Beneficiary Consultation**

Beneficiary Consultation Meeting #1 Feedback on:

- 1. Lot Size and Lot Configuration
- 2. "Rural" Infrastructure
- 3. Community Spaces

# **Beneficiary Consultation Meeting #1**

 Beneficiaries would prefer individual lots vs. shared or clustered lots with neighbors. Preferred lot size 1 acre or up to 3 acres.

12

# <u>Beneficiary Consultation Meeting #1</u>

- "Rural" Infrastructure
- Waste Water: Beneficiaries are 'ok' with septic system on agriculture lot; R-1 water use 'ok'
- Roads: An equal number of beneficiaries indicated they preferred a "rural roadway and "standard residential roadway"

# Beneficiary Consultation Meeting #1

- Community Spaces 17 different types of uses were identified by beneficiaries. Top 3 uses included:
- Child Daycare
- Community Center with Kitchen
  - Cemetery / church
- Agriculture Support Facilities 9 types of uses were identified by beneficiaries. Top 3 uses included:
  - Farmers' Market
- Farm Aggregation Center
   Provide a space for beneficiaries to fail

14

 Provide a space for beneficiaries to farm "now" not later "later" - shared communal agriculture spaces

# **Beneficiary Consultation Meeting #1**

- Want space for business and commercial co-ops
- Be sustainable: consider renewable energy options
- Would like to see some residential uses in Honokowai to accommodate residential wait list applicants too

Ľ

13

- Topography
- Existing Uses
- Archaeological and Cultural Resources
  - Existing roads
- Lands NOT part of DHHL Inventory

## Activities over the last 9 months

- Completed a draft Preliminary Engineering Report on infrastructure costs
- Consulted with state Department of Health on waste water requirements related to IWS vs. municipal
  - Met with neighboring land owners
- Met with County Lahaina Waste Water Reclamation Plant Worked towards completing Cultural Impact Assessment
  - Initiated Traffic Impact Assessment Report
- Initiated HRS 343 environmental review process

## **Preliminary Engineering Report**

Rough Ord	ler of Magnitude (R	OM) Cost Estimato	es for Infrastructure
	ň	svelopment	
	Alt. 1 Mix Agriculture and Residential	Alt. 2 Sub-ag focused on individual farming	Alt. 3 Sub-ag with more community areas
Total Cost	\$50,695,000	\$52,772,250	\$53,061,800
Cost Per Lot	\$45,000	\$91,000	\$83,000

Alt. 1 Mix Agriculture and Residential	0.363 MGD	

County Lahaina Wastewater Treatment Plant indicated it has available capacity to receive wastewater under Alternative 1.

### 12/16/2020

# **Preferred Alternative Considerations**

We considered the following factors when selecting:

- Beneficiary input
- Number of waitlist beneficiaries DHHL can accommodate
- Development Cost & Available infrastructure

## Next-Steps In Planning Process

- Draft Environmental Assessment 1<sup>st</sup> quarter 2021
- Final Environmental Assessment Summer 2021\*

\* Final Environmental Assessment schedule of completion assumes no significant comments that would result in major changes to the preferred plan.

6

less expensive alternative

38

### 12/16/2020

### **Questions & Discussion**

- Questions on Presentation Material
- Discussion on Preferred Alternative
- What do you like about the preferred alternative?
- What suggestions for improvement do you have for the preferred alternative?
- Other mana`o about DHHL's Honokowai Planning Process?

Purpose of Tonight's Informational Meeting

Last Planning Meeting—Dec. HHC Approval

- 1. Overview of Past Plans and this Planning Process
- 2. The Updated Honokōwai Master Plan
- 3. Summary of Findings from the Environmental Assessment (EA)
- 4. Next Steps
- 5. Comments, Questions/Answers

### 'Acquisition' of Honokōwai

- The Hawaiian Homes Commission Act did not include any lands in West Maui
- In 1995, the State agreed to compensate DHHL for its wrongful use of Hawaiian Home Lands. The Honokōwai lands were transferred to DHHL by DLNR as part of the Act 14 Settlement Agreement.

- 9 TMK Parcels Conveyed
- Approximately 777 acres.
- Key areas were <u>not</u> transferred:
  - ✓ Honokōwai Gulch
  - ✓ Reservoirs
  - ✓ Several Access/utility easements

DEPARTMENT OF HAWAIIAN HOME LANDS – PLANNING OFFICE

### Maui Island Plan -- Assigned Land Use Designations • Honokōwai identified as 1 of 3 priority tracts for development

### 2019-2021 Honokōwai Subsistence Agricultural Homestead Community Master Plan and EA

Hono	kōwai	Master	Plan
------	-------	--------	------

9/25/19	Beneficiary Planning Meeting #1
2/26/20	Beneficiary Planning Meeting #2
11/12/20	Beneficiary Planning Meeting #3

Overall Goal: To develop a new agricultural homestead community at Honokōwai and to designate lands for conservation buffers, infrastructure, and a range of community uses that would support a 'whole' community.

#### **Technical Studies**

- Botanical and Faunal Survey Archaeological Reconnaissance Survey Cultural Impact
- Assessment ✓ Transportation Impact Analysis Report ✓ Preliminary Infrastructure
- Analysis Report

#### Chapter 343, HRS Environmental Assessment

Trigger: any use of State lands or State funds

- Identify impacts of the project and Level of Impact
- Assess impact—Bad impact? Good impact?
  - Determine level of impact Significant? Low?
- Mitigate/Lessen Impacts

#### **Possible Outcomes**

Small impact, meets criteria for EA Exemption Finding of No Significant Impacts (FONSI) Significant Impacts—have to do a full Environmental Impact Statement.

#### Accepting Agency (who approves) Hawaiian Homes Commission

December meeting—Request Approval of the Honokōwai Master Plan and the Final EA, FONSI

DEPARTMENT OF HAWAIIAN HOME LANDS – PLANNING OFFICE

### Who Are We Planning For?

## • Maui Island Ag Waitlist = 4,722 applicants

- 788 (17%) already have a lease
- 3,521 (75%) have filed 2 applications
- 4,102 (86%) live in the State of Hawai'i

## • The First 500 on Maui's Ag Waitlist

- 126 (25%) live on Maui
- 273 (55%) live on Oʻahu
- The average age is 67

## **Beneficiary Profile**

Pick one of the following that	%
best describes you	
Applicant on 2 Waitlists	33%
Applicant on Ag Waitlist	22%
Residential Lessee and	28%
Applicant on Ag Waitlist	
I am NOT a DHHL applicant or a	11%
lessee.	
Blank	6%
	100%

## **Small Group Sessions – 4 Topics**

- 1. Lot Size and Lot Configuration
- 2. "Rural" Infrastructure
- 3. Community Spaces
- 4. The Ag Homestead Lease, Transfers and Succession

## **Community Land Uses**

Summary of Proposed Land Uses- Community	ACRES (PERCENT)		Trade 1 for

## **Evaluation of Resources**

- Drainage and Hydrology
  - Drains to • Onepeha gulch
  - Honokōwai Stream/gulch Drains to
  - Kanaunau Stream/gulch

Honokōwai Reservoir (not DHHL)

open coastal waters between Pu'u Ōla'i and Nākālele Point

- Natural Resources
  - No endangered/threatened species observed
  - Host plants ('a'ali'i, and tobacco tree) were observed

DEPARTMENT OF HAWAIIAN HOME LANDS - PLANNING OFFICE

Impacts and Mitigations		
Climate	• Sound	
Geology & Topography	Air Quality	
• Soils	Human-made Hazards	
• Surface Water, Wetlands & Groundwater	Roadways and Public Transit	
Natural Hazards- Flood	• Infrastructure and Utilities	
Natural Hazards- Fire	Socio-Economic Characteristics	
Biological Resources	Public Services and Facilities	
Archaeological & Historic Resources	Airport Operations / Facilities	
Cultural Resources		

AREA OF IMPACT	IMPACTS IDENTIFIED	MITIGATION MEASURES
Education: Facilities	Mitigable impact on HIDOE schools.	Coordination with HIDOE regarding the West Maui School Impact Fee District based on the chosen residential composition for the Master Plan Area. Various beneficiary stakeholders have expressed enthusiasm for uses such as a Hawaiian language school, cultural education facilities, a charter school and daycare for the Master Plan Area. If realized, these would contribute positively to Maui's educational opportunities.
Archaeological and Historic Resources	No significant adverse impact overall	<ul> <li>Preservation Plan following HRS 6E-8 review</li> <li>Compliance with all laws and rules regarding preservation of archaeological and historic sites</li> <li>Further (ongoing) consultation with SHPD</li> </ul>
Subsurface Historic Resources		<ul> <li>Development will be limited to kula lands, rather than gulches.</li> <li>Consultation with stakeholders related to historic practices, including Maui Cultural Lands, Inc. will be conducted</li> <li>If subsurface historic resources are identified during development, work will cease, it will be protected from additional disturbance, and SHPD will be contacted</li> <li>Construction documents will include a provision detailing these actions</li> </ul>
Climate	No significant adverse impact	Energy conservation, green practices, considering renewable resources and passive energy conservation, and integrated landscaping.
Geology and Topography	No significant adverse impact	Minimize alteration to existing topography, low-impact development strategies, and overall proper drainage design.
Surface Water, Wetlands, and Groundwater	No significant adverse impact overall Mitigable short-term impact during construction.	Minimize topography changes, use low-impact development strategies, compliance with applicable State requirements, compliance with the Clean Water Act, and water conservation.
	Positive impact with regard to injection wells	Setbacks and proposed open space uses are less impactful to these resources. Positive impact with injection wells through use of a substantial quantity of R-1 water from the County wastewater treatment facility, for irrigation.
Natural Hazards	Flood impact: Mitigable No tsunami impact No hurricane impact No earthquake impact No volcanic impact	No habitable structures in Flood Zone A, compliance with Uniform Building Code and other standards, and water conservation measures

AREA OF IMPACT	IMPACTS IDENTIFIED	MITIGATION MEASURES
Man-Made Hazards	Mitigable impact	DHHL will retain an environmental consultant to submit a Sampling and Analysis Work Plan to the DOH HEER Office, to evaluate residual pesticide risk in any areas intended for re-development. If contamination is confirmed or likely, DHHL will issue a notice to site users and, as needed, DHHL will address contamination concerns in cooperation with the HEER Office including possible land use restrictions or remedial action.
Flora and Fauna	No adverse impact, possible positive impact to botanical resources. No significant adverse impact to fauna or insects	<ul> <li>Possible positive impact on botanical resources through reintroduction of traditional practices and supporting resources including ethnic and/or native species, and incorporation of native species in landscaping.</li> <li>To ensure no significant adverse impact to fauna or insects, DHHL will following standard USFWS and DLNR guidance for Hawaiian hoary bat, nēnē, pueo, seabirds, and Blackburn's sphinx moth. DHHL will restrict agricultural activities that could attract wildlife to nearby airport facilities.</li> </ul>
Sound	No long-term impact from site operations	Mitigations include compliance with applicable regulations, and limiting noise from fixed mechanical equipment by tenants. Construction noise mitigations include obtaining a noise permit if necessary and properly muffling construction equipment, incorporation of applicable noise limits, curfew times, and hours. Distance and elevation changed also mitigate nuisance to existing residences. Temporary sound barriers or portable air conditioning equipment will be considered.
Air Quality	No significant adverse impact; mitigation during construction.	Energy conservation and green practices. Construction BMPs mitigate short-term impacts during construction.
Visual Resources	No significant adverse impact	Building setbacks and limited wall heights along Honoapi'ilani Highway. The existing (offsite) County wastewater treatment facility is screened with landscaping.
Roadways and Public Transit:	No adverse impact on existing roadways or traffic conditions in the vicinity. No adverse impact on public transit or multimodal facilities.	DHHL will contribute its fair share for roadway improvements to mitigate impact to existing roadways or existing traffic conditions in the vicinity. We are coordinating with HDOT-HWY and will limit access points to Honoapi'ilani Highway. DHHL is coordinating a roadway connection with the neighboring Pulelehua development. DHHL will not impede planned safety and complete streets improvements and will contribute to the region's multimodal facilities. Onsite conservation buffers will include pedestrian trails that can provide safe mauka and makai access.

AREA OF IMPACT	IMPACTS IDENTIFIED	MITIGATION MEASURES
Infrastructure and Utilities	No adverse impact on potable water. No adverse impact on non-potable water.	The Proposed Action's water needs have been identified by the State Water Projects Plan adopted in 2017. The Master Plan includes lands set aside for County use, including for the County's existing Mahinahina Water Treatment Plant. Impacts regarding potable water will be reduced through the use of a dual potable/non- potable water system. Substantial irrigation demand will be met through the use of R-1 quality effluent and surface water.
Wastewater	No adverse impact on wastewater.	The existing County facility has capacity available to accommodate the Proposed Action. The use of individual wastewater systems (IWS) where appropriate will reduce demand on the municipal system. Sensitive uses will not be placed near the existing County facility.
Solid Waste or Other Utilities.	No impact on solid waste or other utilities	DHHL will comply with the recommendations from the DOH – Solid and Hazardous Waste Branch, and is taking active measures to prevent solid waste dumping. DHHL will explore photovoltaic alternatives. DHHL has developed and is implementing its own renewable energy policy.
Drainage	Mitigable long-term impact regarding drainage.	Minimize alterations to existing grading and existing drainage patterns, and adherence to the site drainage plan(s). Utilize construction best management practices (BMPs), implementation of a grassed swale system, and compliance with applicable rules and regulations
Socio-Economic Characteristics:	No adverse impact on population.	The Proposed Action will provide homestead awards to native Hawaiians, many of whom are low-income families. Therefore, the Proposed Action will benefit rather than expose or adversely affect minority or low-income persons. Population increases suggest a corollary need for more jobs and housing, as well as substantial investments in public and commercial services and infrastructure. The Proposed Action stands to provide both jobs and housing.
West Maui Community Plan	No adverse impact on West Maui Community Plan.	As with the general population, the Proposed Action will benefit rather than expose or disproportionately adversely affect minority or low-income persons in comparison to the rest of the population of West Maui. DHHL looks forward to providing housing and/or employment opportunities and a safe environment for its beneficiaries, which will likely benefit the wider West Maui community.

DEPARTMENT OF HAWAIIAN HOME LANDS – PLANNING OFFICE

AREA OF IMPACT	IMPACTS IDENTIFIED	MITIGATION MEASURES
Public Services and Facilities	No impact on police, fire, and medical services.	The Master Plan Area is within adequate response zones of two fire stations, and developed areas of the Master Plan Area will have sufficient water flow and fire safety mitigations. A minimum of 30 feet of defensible space will be provided between proposed structures and undeveloped lands.
Recreational Facilities	No impact on nearby recreational facilities	There is a variety of recreational facilities to serve the Master Plan Area within reasonable distance with adequate capacity to accommodate future residents.
Airports	No impact on airport operations or facilities.	DHHL will restrict agricultural activities that could attract wildlife to nearby airport facilities. DHHL acknowledges that photovoltaic systems can cause visual and/or radio interference for aircraft pilots, and that any such system in the Master Plan Area should be prepared for immediate hazard mitigation upon notification by HDOT and/or FAA.
Cultural Resources and Kuleana Lands	Overall positive impact. No significant adverse impacts.	<ul> <li>Proper design of infrastructure and siting of land uses, avoidance of areas with cultural resources, and employing the following measures:</li> <li>Continue research into cultural resources within the Master Plan Area</li> <li>Use traditional place names</li> <li>Use traditional and/or native plants and crops:</li> <li>Increase connectivity between the mauka and makai resources of Honokōwai ahupua'a</li> <li>Foster a mālama 'āina land stewardship ethic that extends beyond the physical boundaries of DHHL's lands</li> <li>Minimize coastal resource degradation that may result from flooding</li> <li>Avoid use of areas with Land Commission Award (LCA) claims until the claims are legally resolved.</li> </ul>
Wildfire	Positive impact on wildfire reduction across the landscape	Proper land maintenance, the return of active agriculture and irrigation, and the establishment of a 30-foot defensible space between proposed structures and undeveloped lands.
Soils	Positive long-term impact	The return of agriculture and irrigation on fallow lands which are ideal for agricultural use.
Flora and Fauna	Possible positive impact on botanical resources No significant adverse impact to fauna or insects	Reintroduction of traditional practices and incorporation of native species. DHHL will follow standard USFWS and DLNR guidance for Hawaiian hoary bat, nēnē, pueo, seabirds, and Blackburn's sphinx moth. DHHL will restrict agricultural activities that could attract wildlife to nearby airport facilities.

## Schedule for Completing the Environmental Process

Follow up Coordination						
RESPONSIBLE ENTITY	PERMIT/APPROVAL/COORDINATION					
Hawaiian Homes Commission	Update DHHL Maui Island Plan with updated Land Use Plan for Honokowai					
State DOH– Clean Water Branch	National Pollutant Discharge Elimination System (NPDES) Permit					
State DOH– Disability and Communication Access	Review					
State DOH– Indoor and Radiological Health Branch	Community Noise Permit (if applicable)					
State DOH- Wastewater Branch	Review, Individual Wastewater System approval (by future lessees)					
State DLNR– State Historic Preservation Division	Chapter 6E, HRS compliance and Section 106 compliance as needed					
State DLNR- Commission on Water Resource Management	Surface Water Use Permit (if applicable)					
County of Maui Department of Public Works	Grading/Subdivision/Building/Electrical Permits, plan review					
County of Maui Department of Water Supply	Review, coordination, and allocation of additional water					
County of Maui Planning Department and/or Planning Commission	Use Permits, plan review Flood Development Permit (if applicable)					
County of Maui Wastewater Reclamation Division	Review					
Pulelehua Development	Coordination					
Hawaii Department of Transportation	coordination regarding the proposed Lahaina By-pass					
Honokowai lessees and beneficiaries on waitlist	identification and implementation of community uses					
MLP, Pioneer Mills, Kaanapali Coffee Farms	Easement for roadway connections

# **Planning Strategies**

PLANNING STRATEGIES

- Deliver land to native Hawaiians
- Create a Master Plan that is grounded by traditional Hawaiian values and relationships to the land.
- Establish a mix of uses to make the community more resilient and sustainable.
- Establish uses that facilitate agriculture and job creation opportunities.
- Establish design and operational criteria to promote environmental stewardship and resource conservation.
- Provide a range of housing types to meet the diverse needs of DHHL beneficiaries.

#### **KEY DRIVERS**

- The needs of beneficiaries
- DHHL plans and programs
- Beneficiary feedback and desires
- Land development constraints and opportunities.

- DHHL
  - Roads/Access
  - Drainage
- Lessees
  - Water (catchment)
  - Wastewater (individual wastewater systems)
  - Electricity
  - Communications
