JOSH GREEN LT. GOVERNOR STATE OF HAWAII

WILLIAM J. AILA, JR CHAIRMAN HAWAIIAN HOMES COMMISSION

TYLER I. GOMES DEPUTY TO THE CHAIRMAN

#### STATE OF HAWAII DEPARTMENT OF HAWAIIAN HOME LANDS

P. O. BOX 1879 HONOLULU, HAWAII 96805

January 28, 2022

Ref.: PO-22-025

Ms. Mary Alice Evans, Director State of Hawai'i Office of Planning and Sustainable Development Environmental Review Program 235 S. Beretania Street, Room 702 Honolulu, Hawai'i 96813

Subject: Transmission of Final Environmental Assessment/ Finding of No Significant Impact for the Department of Hawaiian Home Lands (DHHL) Honokōwai Master Plan for publication in *The Environmental Notice* 

Dear Ms. Evans:

With this letter, the DHHL hereby transmits the documents package for the Final Environmental Assessment – Finding of No Significant Impact (FEA – FONSI) for the DHHL Honokōwai Master Plan in the Lahaina District on the island of Maui, for publication of a notice of availability in the next available edition of The Environmental Notice, pursuant to Chapter 343, Hawai'i Revised Statutes, and Title 11, Chapter 200.1, Hawai'i Administrative Rules.

The online ERP Submittal Form has been submitted through the ERP website, along with this letter, one searchable Adobe Acrobat PDF file of the FEA – FONSI, and a shapefile of the area of the proposed action.

Concurrently with this letter, we have submitted by mail one paper copy of the Final EA to the Lahaina Public Library, and one paper copy to the Hawai'i Documents Center. A copy is also available at DHHL's offices in Kapolei.

If there are any questions, you or your staff may contact Julie Ann Cachola, Senior Planner at (808) 620-9500 or contact Ms. Cachola by email at <u>julie-ann.cachola@hawaii.gov</u>.

Sincerely,

William J. Ailā, Chair Hawaiian Homes Commission

#### **Action Name**

DHHL Honokowai Master Plan

#### Type of Document/Determination

Final environmental assessment and finding of no significant impact (FEA-FONSI)

#### HRS §343-5(a) Trigger(s)

• (1) Propose the use of state or county lands or the use of state or county funds

#### **Judicial district**

Lahaina, Maui

#### Tax Map Key(s) (TMK(s))

(2) 4-4-001:015; (2) 4-4-002:003; (2) 4-4-002:008; (2) 4-4-002:009; (2) 4-4-002:011; (2)4-4-002:015; (2) 4-4-002:018; and (2) 4-4-002:038

#### Action type

Agency

#### Other required permits and approvals

Refer to Section 5.4, Approvals and Permits.

#### Proposing/determining agency

State of Hawaii Department of Hawaiian Home Lands

#### Agency contact name

Malia Cox

#### Agency contact email (for info about the action)

malia.m.cox@hawaii.gov

#### Email address or URL for receiving comments

ccullison@pbrhawaii.com

#### Agency contact phone

(808) 620-9500

#### Agency address

P.O. Box 1879 Honolulu, HI 96805 United States <u>Map It</u>

#### Was this submittal prepared by a consultant?

Yes

#### Consultant

PBR HAWAII & Associates, Inc.

#### **Consultant contact name**

Carrie Ragsdale

#### **Consultant contact email**

cragsdale@pbrhawaii.com

#### Consultant contact phone

(804) 972-2022

#### **Consultant address**

1001 Bishop Street Suite 650 Honolulu, HI 96813 United States <u>Map It</u>

#### Action summary

DHHL engaged its beneficiaries in a master planning process to determine appropriate land uses for DHHL's lands at Honokōwai including new agricultural homesteads, multi-family homes, and individual or community farming.

The land uses in the Master Plan Area are anticipated to involve agricultural homesteads (subsistence and supplemental agriculture); residential homesteads (single-family and multi-family); community uses including agriculture, park, and commercial areas; conservation areas; industrial uses; roadways; and lands set aside to accommodate County infrastructure.

#### **Reasons supporting determination**

Refer to Section 7, Findings and Determination

#### Attached documents (signed agency letter & EA/EIS)

- <u>Agency-Submittal-Letter-and-Enclosure.pdf</u>
- FEA-DHHL-Honokowai-Master-Plan.pdf

#### Shapefile

• The location map for this Final EA is the same as the location map for the associated Draft EA.

#### Action location map

#### Authorized individual

Carrie Ragsdale

#### Authorization

• The above named authorized individual hereby certifies that he/she has the authority to make this submission.

# FINAL ENVIRONMENTAL ASSESSMENT ANTICIPATED FINDING OF NO SIGNIFICANT IMPACT (HRS 343)

Honokōwai Ahupua'a, Kā'anapali Moku, Maui TMKs (2) 4-4-001:015; (2) 4-4-002:003, 008, 009, 011, 015, 018, and 038

**PROPOSING AGENCY:** 

DEPARTMENT OF HAWAIIAN HOME LANDS

PREPARED BY:

Prepared pursuant to Chapter 343, Hawai'i Revised Statutes and Chapter 11-200.1, Hawai'i Administrative Rules

**FEBRUARY 2022** 

Final Environmental Assessment – Finding of No Significant Impact

Approving Agency: DEPARTMENT OF HAWAIIAN HOME LANDS

Prepared by:

February 2022

Alternatives	Four alternatives were considered:
Considered:	No action alternative
	<ul> <li>Subsistence Agriculture with Community Farming</li> </ul>
	Subsistence Agriculture Only
	• Single-Family and Multi-Family with Subsistence Agriculture
	(preferred alternative)
Potential Impacts and	Climate: No impact on climatic conditions. Mitigations include energy
Mitigation Measures:	conservation, green practices, considering renewable resources and
_	passive energy conservation. Creation of hardscapes may slightly
	increase local air temperature for a non-significant impact. Mitigations
	include integrated landscaping.
	Geology and Topography: No impact. Mitigations include minimizing
	alteration to existing topography, low-impact development strategies,
	and overall proper drainage design.
	Soils: Positive long-term impact through the return of agriculture and
	irrigation on fallow lands which are ideal for agricultural use. Mitigable
	snort-term impact during construction. Witigations include construction
	best management practices (BIVIPS) and compliance with applicable
	rules and regulations.
	Surface Water Wetlands and Groundwater: No long-term adverse
	impact to surface water, wetlands, or groundwater. No long term adverse
	of conservation space 30 acres of park space and majority agricultural
	uses are anticipated as part of the Proposed Action. Mitigations include
	minimizing alteration to existing tonography low-impact development
	strategies including the implementation of a grassed swale system
	compliance with applicable State requirements compliance with the
	Clean Water Act, and water conservation. Plans will include a 100-foot
	setback from gulches, for conservation purposes. Positive impact with
	regard to injection wells through use of a substantial quantity of R-1
	quality effluent from the County wastewater treatment facility.
	Mitigable short-term impact during construction. Mitigations include
	construction BMPs and compliance with applicable rules and
	regulations.
	Natural Hazards: Mitigable flood impact. No tsunami impact. No
	nurricane impact. No earthquake impact. No volcanic hazard impact.
	Mitigable impact from climate change. Mitigations include no habitable
	structures in lands designated Flood Zone A, compliance with Uniform

# SUMMARY

Building Code and other applicable standards, and water conservation measures to mitigate stress on water resources.

Mitigable impact from wildfire. Positive impact on wildfire reduction across the landscape through proper land maintenance, the return of active agriculture and irrigation, and the establishment of a 30-foot defensible space between proposed structures and undeveloped lands.

Flora and Fauna: No adverse impact to botanical resources. Possible positive impact on botanical resources through reintroduction of traditional practices and supporting resources including ethnic and/or native species, and incorporation of native species in landscaping.

No significant adverse impact to fauna (including insects, birds, and mammals) is anticipated, however DHHL will undertake mitigation measures to ensure this is the case. If DHHL becomes aware of the presence of protected species, site users, onsite staff, and contractors will be notified. Mitigable impact to Hawaiian hoary bat. Mitigations include avoidance of site clearing activities between June 1 and September 15, or consultation with DLNR before disturbance of vegetation taller than 15 feet. Barbed wire will not be used for fencing during construction, and alternatives to barbed wire will be encouraged. No impacts to nene or pueo. DLNR will be contacted if birds are believed to be breeding in the Master Plan Area. Reduced speed limits will be posted if any are found to be present. Mitigable impact to seabirds. Mitigations include appropriate exterior lighting, and avoidance of nighttime construction activities between September 15 and December 15. No impact to Blackburn's sphinx moth. Mitigations include examining host plants between November and April, notification of USFWS should host plants over three feet be identified, adherence to all USFWS guidance, and discouraging the growth of host weeds. DHHL will restrict agricultural activities that could attract wildlife to nearby airport facilities.

Archaeological and Historic Resources: No impact. Development activities will be limited to kula lands rather than gulches. Mitigations include compliance with technical consultant recommendations including:

- Preservation Plan following HRS 6E-8 review;
- Compliance with all laws and rules regarding preservation of archaeological and historic sites;
  - Further (ongoing) consultation with SHPD;

<ul> <li>In the unlikely event that subsurface historic resources are identified during development, work will cease in the immediate vicinity of the find, the find will be protected from additional disturbance, and SHPD will be contacted;</li> <li>Relevant construction documents will include a provision detailing the aforementioned criteria for all project-related development of the Master Plan Area;</li> <li>Consultation with Maui Cultural Lands, Inc. will be conducted for all sites currently maintained by the grass roots land trust; and</li> <li>Continued consultation with stakeholders related to historic practices will be conducted, as plans for the Master Plan Area evolve.</li> </ul>
<ul> <li>Cultural Resources: Overall positive impact. No significant adverse impacts. Mitigations include proper design of infrastructure and siting of land uses, avoidance of areas with cultural resources, and attempts to employ the following measures: <ul> <li>Stakeholder interviews revealed a desire for residents to grow traditional and/or native plants that could serve aesthetic, traditional, and educational purposes. Crops grown in the mauka regions of the development could be traded or shared with residents in the makai portion; thereby, allowing residents to engage in the traditional practice of kuapo (trade).</li> <li>A community facility to process agricultural products should also be considered, to facilitate intra-community trade as noted above.</li> <li>Provide agricultural and Hawaiian culture resources for site users. For instance, proposed uses are compatible with the construction of a hale wa'a (canoe house) that could be used to teach and learn about voyaging culture.</li> </ul> </li> </ul>
<ul> <li>existing or potential Land Commission Award (LCA) claim will not be developed until the status and/or validity of that claim can be legally resolved. DHHL will avoid use of any such areas and respect its boundaries until a complete title search and further research as to a potential claim's validity can be conducted.</li> <li>Encourage use of traditional place names when possible in Master Plan Area design, signage, and related materials.</li> <li>Minimize coastal resource degradation that may result from flooding.</li> </ul>

<ul> <li>Increase awareness of the connectivity between the mauka and makai resources of Honokōwai ahupua'a.</li> <li>As a part of farm planning, the use of appropriate native ground cover in non-cultivated areas should be considered to minimize dust pollution that may result from modern agricultural practices and carried by the winds.</li> <li>Foster and encourage a mālama 'āina land stewardship ethic that extends beyond the physical boundaries of DHHL's lands. Strategies to accomplish this could include BMP monitoring/enforcement, continued agency consultation, and environmental outreach/education programs where possible. Any prospective third-party developers or tenants of commercial/industrial areas who embrace this land ethic should be favorably considered from a cultural standpoint.</li> <li>Prior to the initiation of land development, whether residential, business, or agriculture, appropriate blessings and/or protocols should be carried out.</li> <li>Embrace the re-introduction and cultivation of suitable native and canoe plants, in support of traditional practices and/or crafts.</li> <li>Preserve traditional mauka/makai access through a connective community design. Traditional trails are not known the Master Plan Area; this mitigation embraces a revival of a trail system access across the property.</li> </ul>
Sound: No long-term impact from site operations. Mitigations include compliance with applicable regulations and limiting noise from fixed mechanical equipment by tenants. Mitigable short-term impact during construction. Mitigations include obtaining a noise permit if necessary and properly muffling construction equipment, incorporation of applicable noise limits, curfew times, and hours. Distance and elevation change mitigate nuisance to existing residences during new construction. Temporary sound barriers or portable air conditioning equipment will be considered.
Mitigations include energy conservation and green practices. Mitigable short-term impact during construction. Mitigations include construction BMPs.

Visual Resources: No impact. Mitigations include respect for building setbacks and limited wall heights along Honoapi'ilani Highway. The existing (offsite) County wastewater treatment facility is screened with landscaping.

Man-Made Hazards: Mitigable impact. Mitigations will be as needed and will include retaining an environmental consultant to submit a Sampling and Analysis Work Plan to the DOH HEER Office, to evaluate residual pesticide risk in any areas of the Master Plan Area intended for redevelopment. If contamination is confirmed or likely, DHHL will issue a notice to site users and, as needed, DHHL will address contamination concerns in cooperation with the HEER Office including possible land use restrictions or remedial action.

Roadways and Public Transit: Mitigable impact/no impact. Adverse impact to existing roadways will be mitigated by adhering to TIAR recommended mitigations and/or appropriate fair-share contributions. The Honokōwai Master Plan will limit access points to Honoapi'ilani Highway and are being coordinated with HDOT-HWY. DHHL is coordinating on a potential roadway connection with the neighboring Pulelehua development. Mitigable impact with regard to construction impacts; a Construction Management Plan will be prepared for each development phase and/or project within the Master Plan Area, prior to construction permits being issued. DHHL notes that construction impacts are temporary and usually less impactful than the project as a whole, especially since the Master Plan Area will be built out in three or more separate phases.

No adverse impact on public transit or multimodal facilities. DHHL will not impede planned safety and complete streets improvements along Lower Honoapi'ilani Highway and will contribute to the region's multimodal facilities where appropriate. Designated areas within onsite conservation buffers may also be used for appropriately designed pedestrian trails that can provide safe mauka and makai access.

Infrastructure and Utilities: No adverse impact regarding potable water and non-potable water. The proposing agency DHHL is coordinating with other agencies. Potable water systems would be designed to County standards, and water supplies in the aquifer are sufficient to support the Proposed Action. The Proposed Action's water needs have been identified by the State Water Projects Plan adopted in 2017. Impacts regarding potable water system. The Master Plan also includes lands set aside for County use, including for the County's existing Mahinahina Water Treatment Plant.

No adverse impact regarding non-potable water. Substantial irrigation demand will be met through the use of R-1 quality effluent and surface water.

No adverse impact regarding wastewater. The existing County facility has capacity available to accommodate the Proposed Action. The use of individual wastewater systems (IWS) where appropriate will reduce demand on the municipal system. Sensitive uses will not be placed near the existing County facility.

Mitigable long-term impact regarding drainage. Mitigations include minimized alterations to existing grading and existing drainage patterns, and adherence to the site drainage plan(s). Mitigable short-term impact during construction. Mitigations include construction best management practices (BMPs), implementation of a grassed swale system, and compliance with applicable rules and regulations.

No impact regarding solid waste or other utilities. DHHL will consult with HECO regarding electrical utilities and will explore photovoltaic alternatives. DHHL has developed and is implementing its own renewable energy policy. To mitigate impacts related to existing onsite solid waste deposits, DHHL will comply with the recommendations from the DOH – Solid and Hazardous Waste Branch and is taking active measures to prevent solid waste dumping from occurring in the future.

Socio-Economic Characteristics: No adverse impact on population. The Proposed Action will provide homestead awards to native Hawaiians, many of whom are low-income families. Therefore, the Proposed Action will benefit rather than expose or disproportionately adversely affect minority or low-income persons in comparison to the rest of the population. Population increases suggest a corollary need for more jobs and housing, as well as substantial investments in public and commercial services and infrastructure. The Proposed Action stands to provide both jobs and housing.

No adverse impact on West Maui Community Plan. As with the general population, the Proposed Action will benefit rather than expose or disproportionately adversely affect minority or low-income persons in comparison to the rest of the population of West Maui. DHHL looks forward to providing housing and/or employment opportunities and a

	safe environment for its beneficiaries, which will likely benefit the wider West Maui community.
	Public Services and Facilities: Mitigable impact on HIDOE schools. Mitigations include coordination with HIDOE regarding the West Maui School Impact Fee District based on the chosen residential composition for the Master Plan Area. Various beneficiary stakeholders have expressed enthusiasm for uses such as a Hawaiian language school, cultural education facilities, a charter school and daycare for the Master Plan Area. If realized, these would contribute positively to Maui's educational opportunities.
	No impact on police, fire, and medical services. The Master Plan Area is within adequate response zones of two fire stations and developed areas of the Master Plan Area will have sufficient water flow and fire safety mitigations. A minimum of 30 feet of defensible space will be provided between proposed structures and undeveloped lands. DHHL and its technical consultants will consult with the County of Maui Department of Fire and Public Safety as needed.
	No impact on nearby recreational facilities. There is a variety of recreational facilities to serve the Master Plan Area within reasonable distance with adequate capacity to accommodate future residents.
	No impact on airport operations or facilities. A Notice of Proposed Construction or Alteration (or multiple notices) will be submitted to the FAA as needed. DHHL will restrict agricultural activities that could attract wildlife to nearby airport facilities. DHHL acknowledges that photovoltaic systems can cause visual and/or radio interference for aircraft pilots, and that any such system in the Master Plan Area should be prepared for immediate hazard mitigation upon notification by HDOT and/or FAA. Mitigable impacts from airport operations or facilities. Should DHHL suspect that fumes, smoke, noise, vibrations, odors, and other airport-related exposures may impact the anticipated uses of its lands, more protective mitigation strategies will be considered at such time, depending on the nature of the concern. Should other unforeseen impacts arise from aircraft activities which are not mitigated by the strategies described in this EA, DHHL will consider additional measures.
Determination:	Finding of No Significant Impact

**<u>Required Permits and Approvals</u>** – A preliminary list of permits and approvals for the Proposed Action is provided below. See also Table 5-5.

RESPONSIBLE AGENCY	PERMIT/APPROVAL
State Department of Health – Clean Water Branch	National Pollutant Discharge
	Elimination System (NPDES) Permit
State Department of Health – Disability and Communication Access Board	Review
State Department of Health – Indoor and Radiological Health Branch	Community Noise Permit (if applicable)
State Department of Health Wastewater Branch	Review, Individual Wastewater System approval (by future lessees)
State Department of Land and Natural Resources –	Chapter 6E, HRS compliance and
State Historic Preservation Division	Section 106 compliance as needed
State Department of Land and Natural Resources –	Surface Water Use Permit (if
Commission on Water Resource Management	applicable)
County of Maui Department of Public Works	Grading/Subdivision/Building/Electrical Permits, plan review
County of Maui Department of Water Supply	Review
County of Maui Planning Department and/or	Use Permits, plan review
Planning Commission	Flood Development Permit (if
	applicable)
County of Maui Wastewater Reclamation Division	Review

WUDP	County of Maui Water Use and Development Plan

# **1 OVERVIEW**

This Environmental Assessment (EA) is prepared pursuant to Chapter 343, Hawai'i Revised Statutes (HRS), and Title 11, Chapter 200.1, Hawai'i Administrative Rules (HAR), Department of Health (DOH), State of Hawai'i, based on the proposed use of State funds, and State and County lands. The Proposed Action is an agency-proposed action by Department of Hawaiian Home Lands (DHHL).

# 1.1 **PROPOSED ACTION PROFILE**

Proposed Action:	DHHL Honokōwai Master Plan			
Location:	Honokōwai ahupuaʻa, Kāʻanapali moku, County of Maui			
Address:	Honoapi'ilani Highway, Maui, HI (Figure 1, Figure 2)			
Judicial District:	Lahaina			
Tax Map Keys:	(2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, and 038. See Figure 3, Tax Map Key.			
Land Area:	Approximately 777 acres			
Proposing Agency:	State Department of Hawaiian Home Lands (DHHL)			
Approving Agency:	Hawaiian Homes Commission			
Recorded Fee Owner:	The Master Plan Area is owned by the State of Hawai'i, Department of Hawaiian Home Lands. <sup>1</sup>			
Existing Use:	Formerly used agriculture lands, generally vacant and unimproved.			
Proposed Action:	DHHL engaged its beneficiaries in a master planning process to determine appropriate land uses for DHHL's lands at Honokōwai including new agricultural homesteads, multi-family homes, and individual or community farming.			
	The land uses in the Master Plan Area are anticipated to involve agricultural homesteads (subsistence and supplemental agriculture); residential homesteads (single-family and multi-family); community uses including agriculture, park, and			

<sup>&</sup>lt;sup>1</sup> Certain DHHL lands are listed in the County of Maui's Tax Assessor's Office database as owned by "State of Hawai'i". DHHL is conducting due diligence to resolve any outstanding processes regarding land ownership, prior to proceeding with the various project components of the Proposed Action. DHHL has full control of the Master Plan Area and is considered to be the managing State agency for all TMK parcels within the Master Plan Area.

Final Environmental Assessment- Finding of No Significant Impact

commercial areas; conservation areas; industrial uses; roadways; and lands set aside to accommodate County infrastructure.

Land Use Designations: DHHL Land Designation (Maui Island Plan 2004): General Agriculture (407 ac.), Supplemental Agriculture (205 ac.), Residential (111 ac.), Commercial Use (30 ac.), Community Use (19 ac.), Industrial (5 ac). See Figure 4.

> State Land Use: Agricultural County Zoning: AG Agriculture, R-3 Residential, Interim, and Road Special Management Area (SMA): Not in the SMA

**Alternatives Considered:** No action alternative; Subsistence Agriculture with Community Farming<sup>2</sup>; Subsistence Agriculture Only<sup>3</sup>; and Single-Family and Multi-Family with Subsistence Agriculture<sup>4</sup> (preferred alternative).

Potential Impacts and Mitigation Measures: Refer to the Project Summary.

## 1.2 LOCATION

The Master Plan Area is located approximately five miles north of Lahaina, inland (mauka) of Honoapi'ilani Highway (State Route 30) generally between Kaka'alaneo Drive and Kapalua Airport. See Figure 1 and Figure 2.

#### 1.3 LAND OWNERSHIP

The Proposed Action involves eight TMK parcels, all owned by DHHL: TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, and 038 ("the Master Plan Area"). The total land area of the Program Area is approximately 777 acres. See Figure 3 for the Master Plan Area in the context of surrounding lands.

<sup>&</sup>lt;sup>2</sup> This alternative was referred to as (3) Subsistence Ag with Community Ag Areas Agriculture during the beneficiary consultation meetings held in February and November 2020.

<sup>&</sup>lt;sup>3</sup> This alternative was referred to as (2) Subsistence Ag Focused on Individual Farming Agriculture during the beneficiary consultation meetings held in February and November 2020.

<sup>&</sup>lt;sup>4</sup> This alternative was referred to as (1) Residential with Subsistence Agriculture during the beneficiary consultation meetings held in February and November 2020.

DHHL is the fee simple landowner and will lease homestead lots to its beneficiaries, homestead associations, and/or other tenants.

The Master Plan Area was formerly used for sugarcane cultivation. DHHL acquired the Master Plan Area between 1995 and 2010. Prior to sugar cultivation, Honokōwai was a rich agricultural area known for its kalo (taro) fields.

# 1.4 IDENTIFICATION OF THE PROPOSING AGENCY

The State of Hawai'i, Department of Hawaiian Home Lands is the Proposing Agency.

**Contact:** Julie Ann Cachola, Senior Planner

**Planning Office** 

State of Hawai'i, Department of Hawaiian Home Lands

P.O. Box 1879, Honolulu, HI 96805

Phone: (808) 620-9500 / FAX: (808) 620-9559

Email: julie-ann.cachola@hawaii.gov

Final Environmental Assessment- Finding of No Significant Impact

## 1.5 **IDENTIFICATION OF ENVIRONMENTAL CONSULTANT**

The environmental consultant is PBR HAWAI'I & Associates, Inc.

**Contact:** Catie Cullison, Principal

PBR HAWAI'I

1001 Bishop Street, Suite 650

Honolulu, HI 96813

Phone: (808) 521-5631

# 1.6 **IDENTIFICATION OF APPROVING AGENCY**

DHHL is the Approving Agency.

## 1.7 COMPLIANCE WITH STATE OF HAWAI'I ENVIRONMENTAL LAWS

This document has been prepared in accordance with the provisions Chapter 343, HRS (Environmental Impact Statement Law) and Title 11, Department of Health, Chapter 200.1, Hawai'i Administrative Rules (Environmental Impact Statement Rules).

Section 343-5, HRS, establishes nine "triggers" that require compliance with the State's EIS law. The triggers for the Proposed Action include:

• Propose the use of state or county lands or the use of state or county funds.

In the event that the Proposed Action uses Federal funds, DHHL will comply with the requirements of the National Environmental Policy Act by a separate document.

Under the provisions of §343-5 (b), HRS and based on the significance criteria set forth under Section 11-200.1-13(b), HAR, DHHL expects to determine, through its judgment and experience, that the Proposed Action will not have a significant effect and therefore does not require preparation of an Environmental Impact Statement (EIS). The significance criteria set forth under Section 11-200.1-13(b), HAR are listed below.

- 1. Irrevocably commit a natural, cultural, or historic resource;
- 2. Curtail the range of beneficial uses of the environment;
- 3. Conflict with the State's environmental policies or long-term environmental goals established by law;
- 4. Have a substantial adverse effect on the economic welfare, social welfare, or cultural practices of the community and State;
- 5. Have a substantial adverse effect on public health;
- 6. Involve adverse secondary impacts, such as population changes or effects on public facilities;

Final Environmental Assessment- Finding of No Significant Impact

- 7. Involve a substantial degradation of environmental quality;
- 8. Be individually limited but cumulatively have substantial adverse effect upon the environment or involves a commitment for larger actions;
- 9. Have a substantial adverse effect on a rare, threatened, or endangered species, or its habitat;
- 10. Have a substantial adverse effect on air or water quality or ambient noise levels;
- 11. Have a substantial adverse effect on or be likely to suffer damage by being located in an environmentally sensitive area such as a flood plain, tsunami zone, sea level rise exposure area, beach, erosion-prone area, geologically hazardous land, estuary, fresh water, or coastal waters;
- 12. Have a substantial adverse effect on scenic vistas and viewplanes, during day or night, identified in county or state plans or studies; or
- 13. Require substantial energy consumption or emit substantial greenhouse gases.

This document contains a detailed discussion of the basis for DHHL's determination.

# 1.8 STUDIES CONTRIBUTING TO THIS EA

The information contained in this report has been developed from site visits, generally available information regarding the Master Plan Area and surrounding areas, and technical studies. Technical studies include:

- Botanical and Faunal Survey
- Archaeological Reconnaissance Survey
- Cultural Impact Assessment
- Transportation Impact Analysis Report
- Preliminary Infrastructure Analysis Report
- Preliminary Drainage Report
- Master Plan Report

(This page left blank intentionally.)

# 2 DESCRIPTION OF THE PROPOSED ACTION

## 2.1 BACKGROUND INFORMATION

#### 2.1.1 Location and Master Plan Area Description

The Proposed Action is located in Honokōwai ahupua'a, Kā'anapali moku, Island and County of Maui. See Figure 1.

## 2.1.2 Existing and Surrounding Land Uses

The Master Plan Area is largely vacant former pineapple field land.

The surrounding uses are as follows (see Figure 2 and Figure 5):

	Surrounding Use	Landowner		
North	Vacant land	Maui Land & Pineapple Co		
	Kā'anapali Airport	State of Hawai'i DOT		
	Planned Pulelehua residential and commercial development	Maui Oceanview LP		
South	Vacant land	Kāʻanapali Land Management Corp,		
	Kāʻanapali Coffee Farms	Kā'anapali Coffee Farms Lot Owners Assoc		
East	Vacant / agricultural land	Kā'anapali Development Corp, State of		
		Hawai'i, Maui Land & Pineapple Company		
		Inc, Maui 17-1 LLC,		
West	Honoapi'ilani Highway and	(various)		
	Lower Honoapi'ilani Road			
	Lahaina Wastewater	State of Hawaiʻi / County of Maui		
	Reclamation Facility (LWWRF)			
Non-DHHL lands within the Master Plan Area	Gulch	Pioneer Mill Company LLC (land cour property) / Kā'anapali Development Corp (regular system property), Maui Land & Pineapple Co, various small land and/o kuleana owners		
	Honokōwai reservoir	Maui Land & Pineapple Co, Maui 61-5 LLC		

# 2.2 PURPOSE AND NEED

Pursuant to DHHL's mission<sup>5</sup> the purpose of the Proposed Action is to evaluate the most appropriate uses for DHHL's lands in Honokōwai, by developing a master plan through the Beneficiary Consultation process and technical studies, and to ensure conformance with the (DHHL) Maui Island Plan (Department of Hawaiian Home Lands, 2004), to provide direct and indirect benefits to DHHL beneficiaries and programs in the form of improved lands, homesteading opportunities, agriculture and/or community supporting uses, and revenue generation opportunities. DHHL's primary intent is to repurpose lands previously in pineapple cultivation but currently fallow to subsistence agricultural, residential, community, commercial, and industrial use, and to support those uses with adequate infrastructure.

Like many DHHL lands across the state, the Master Plan Area has rich agricultural history, and it is anticipated that through proper stewardship and management, the Master Plan Area can be restored to its former productivity, and a resource for native Hawaiians.

# 2.3 **DESCRIPTION OF THE MASTER PLAN**

DHHL has recently updated its plans for the Master Plan Area. The master planning effort was undertaken by Planning Consultants Hawai'i (PCH) between 2019 and 2020, working closely with DHHL's beneficiary community. Refer to Section 5.1 for a detailed description of the master planning process.

DHHL's Beneficiary Consultation process resulted in the development of three alternative land use plans. They are differentiated by their development intensity (refer to Section 6.3). The alternative land use plans can be described as:

- Subsistence Agriculture with Community Farming
- Subsistence Agriculture Only; and
- Single-Family and Multi-Family with Subsistence Agriculture (preferred alternative)

The beneficiary community's preferred alternative is also the alternative that would generate the most homes/lots. For the purposes of this "programmatic" EA, since the other alternatives would result in lesser numbers of homes/lots (51% and 56% of the development potential shown in Figure 5), analyzing the alternative that would generate the most homes/lots should also adequately address impacts of the other alternatives, which would generate less impacts. (DHHL notes that the less impactful alternatives would also be less consistent with DHHL's mission "...to develop and deliver lands to native Hawaiians.") Refer to Section 6.3 for a discussion of the alternative plans for the Master Plan Area.

<sup>&</sup>lt;sup>5</sup> It is DHHL's mission "to manage the Hawaiian Home Lands trust effectively and to develop and deliver lands to native Hawaiians. We will partner with others towards developing self-sufficient and healthy communities."

Final Environmental Assessment- Finding of No Significant Impact

Proposed Uses		Maximum Number of Homes per Acre	Alternative that Would Generate the Most Homes/Lots	
			Acres	lots/homes
Homestead	Subsistence Agricultural Homesteads: 1 to 2 acre lots	1	342	252
	Residential Homesteads: Single-Family (7,500 square foot Lots)	6	75	356
	Residential Homesteads: Multi-Family	15	37	573
	Supplemental Agriculture (Non- residential Homesteads)	-	14	0
Community	Community Use: Agriculture	-	16	0
	Community Use: Parks	-	28	0
	Community Use: Commercial	-	27	0
Other	Conservation: Gulches & Buffers	-	146	0
	Industrial	-	16	0
	Roads	-	58	0
	County Facilities	-	18	0
	Total Acres & Lots in Honokōwai		777	1,181

# Table 2-1: Summary of the Alternative that Would Generate the Most Homes/Lots

It should be noted that the alternative that would generate the most homes/lots would result in an overall density of 1.5 units per acre. In comparison, given a minimum lot size 7,500 square feet only five single-family homes could be developed on an acre of land (i.e., five units per acre). Descriptions of the Proposed Uses shown in Figure 5 are described below.

**Homestead Residential: Single-Family**. These areas would be developed as residential subdivisions designed and built to County of Maui standards. Potable water, wastewater, and to the extent feasible roads would be designed to County standards. Lot sizes would be approximately 7,500 square feet.

**Homesteads for Subsistence Agriculture.** Subsistence agricultural homesteads are agricultural lots that are not more than three acres in size and allow for, but do not require, a residence. For planning purposes, DHHL assumed that all subsistence agricultural homesteads will include a single-family residence. DHHL's requires that these homestead awards be developed in three years, which includes actively cultivating subsistence agricultural homesteads are intended for producing agricultural crops, poultry and/or livestock for home consumption. Beneficiaries are allowed to, but not required to live on the lots.

# Final Environmental Assessment- Finding of No Significant Impact

**Homestead Residential: Multi-Family.** These areas would be developed as low-rise (two- to three-story) townhomes with a density of 15 units per acre.

**Homesteads for Supplemental Agriculture.** These areas will provide successful subsistence farming lessees with opportunities for additional acreage to grow their crops. These awards would be for non-residential lots.

**Community and Civic Uses.** These areas will produce a more complete, functional, and livable community. DHHL beneficiaries have expressed interest in a wide range of neighborhood commercial and service uses such as a farmer's market, neighborhood store, a community clinic, barber shop, café, or yoga studio. Other uses may include park space and community farms, schools including Hawaiian immersion programs, kūpuna daycare, community centers, agricultural support facilities (for example, a crop processing center), churches, and cemeteries. The Master Plan Area also includes walking paths that connect gulches. See also Section 4.7.1.

Community and civic use areas fall into three general categories: agriculture (communal farming and gardening areas), parks, and commercial (a mix of commercial and civic uses).

**Conservation Uses (Gulches and Buffers).** These areas include lands with environmentally sensitive areas; steep slopes; potential for biological habitat restoration; challenges for development; and meant to be kept undeveloped as drainageway buffers, biological resource protection and open space.

**Industrial Uses.** These areas include lands suitable for processing, construction, manufacturing, transportation, wholesale, warehousing, agriculture related industry and other light industrial activities. The "Industrial" area would be developed as an industrial subdivision (lot sizes as yet undetermined), with infrastructure designed and built to County of Maui standards.

Light industrial users could include smaller businesses including those of DHHL beneficiaries, to support beneficiary economic development initiatives. Activities in this area will build capacity in the small business community by providing a space for individual businesses or beneficiary individuals or organizations to produce and sell products and services in a central location.

## Roads and Other Infrastructure.

DHHL will design and construct the collector and local roads and major onsite infrastructure. Improvements on each lot would be developed by lot awardees, or in the case of commercial or industrial areas, by the lessees. Access to the Master Plan Area is proposed at three locations that intersect with Honoapi'ilani Highway, including two modified intersections between Akahele Street and Lower Honoapi'ilani Road, and a connection at an existing intersection at Hālāwai Drive. To preserve north-south connectivity across the Master Plan Area, DHHL is contemplating an additional fourth highway access, which would connect with the Hālāwai Drive access. See Section 4.7.

# Planning Consultants Hawaii, LLC

# Planning Consultants Hawaii, LLC

#### **County Facilities.**

The Master Plan also includes lands set aside for County use, including for the Mahinahina Water Treatment Plant (refer to Section 0).

#### 2.4 DEVELOPMENT TIMETABLE AND PRELIMINARY COSTS

The estimated total infrastructure construction cost is estimated at approximately \$50 to \$59 million dollars. Federal or State funds may be used. Engineering design and permitting is anticipated to be completed in 2023. Infrastructure construction is anticipated to be completed around 2027, with vacant lots available shortly thereafter (assumed as 2028 for the purpose of the EA's technical studies).

Residential components of the Proposed Action are anticipated to be undertaken in multiple development phases. Phase 1 will consist of the subsistence agricultural homesteads to the north of Honokōwai gulch (or up to 56 subsistence agricultural homesteads), along with supporting park space and roadways. Phase 2 will consist of up to 394 homesteads including single-family and subsistence agricultural homesteads, agricultural space, park space, and roadways. See Figure 5 and Figure 6. Future phases will realize the remaining components of the Honokōwai Master Plan.

(This page left blank intentionally.)

## 3 DESCRIPTION OF THE NATURAL ENVIRONMENT, POTENTIAL IMPACTS, AND MITIGATION MEASURES

This section describes existing conditions of the natural environment, potential impacts related to the Proposed Action, and mitigation measures to minimize impacts.

#### 3.1 CLIMATE

Like most areas of Hawai'i, Maui's climate is relatively uniform year-round. Maui is characterized by a semi-tropical climate containing a multitude of individual microclimates. Lahaina's climate is relatively uniform year-round, with average temperatures between 60 and 88 degrees Fahrenheit. August is historically the warmest month, with January and February the coolest months. Rainfall at Lahaina is seasonal, with most precipitation occurring between October and April, when winter storms hit the area. Winds in the area are also seasonal, with northeasterly trade winds occurring 90 percent of the time during the summer and just 50 percent of the time in winter.

The main driver of global warming since the mid-20<sup>th</sup> century has been the emission of greenhouse gases from human activities. (U.S. EPA, 2017) Greenhouse gases contribute to global warming by trapping heat in the atmosphere. The most notable greenhouse gases of global concern, in decreasing order of human emissions, are carbon dioxide, methane, nitrous oxide, and fluorinated gases<sup>6</sup>.

- Of the gases listed above, carbon dioxide occurs in the highest concentration and contributes the most to global warming. Carbon dioxide is naturally occurring but also results from the burning of fossil fuels, solid waste, and wood. Changes in land use such as deforestation and soil degradation also contribute to carbon dioxide emissions. Carbon dioxide can remain in the environment for thousands of years after emissions, moving through the ecosystem and atmosphere. Responsible land stewardship practices such as reforestation can sequester carbon dioxide, removing it from the atmosphere.
- Methane is the second most common of these gases, and the second highest contributor to warming. Methane is naturally occurring but also results from the production and transport of oil, natural gas, and coal. Agriculture and the anaerobic decay of organic material in municipal landfills also contribute to methane emissions. Methane can remain in the atmosphere for an average of about 12 years.

<sup>&</sup>lt;sup>6</sup> Technically, water vapor is the most abundant greenhouse gas in Earth's atmosphere. However, human activities have little direct influence over its concentration. Water vapor concentration is controlled by temperature, and warmer temperatures make it easier for water to evaporate and stay in the air in vapor form. Thus human production of other greenhouse gases (such as carbon dioxide and methane) have a substantial indirect influence over water vapor concentrations. The relationship between water vapor and global temperature is an example of a positive feedback loop, in which warming leads to more warming. (U.S. EPA, 2017)

- Nitrous oxide is naturally occurring. Emissions result from agricultural activities, particularly fertilizer use, as well as the burning of fossil fuels and solid waste. Nitrous oxide can remain in the atmosphere for an average of 121 years.
- Emissions of fluorinated gases result from a variety of commercial, industrial, and household uses. Fluorinated gases are sometimes used as substitutes for ozone-depleting chlorofluorocarbons (CFCs) and hydrofluorocarbons (HCFCs). Production of CFC has been phased out globally due to the harm they cause to the ozone layer. They do not occur naturally and therefore are currently present in low concentrations, but these gases have a strong influence on the climate and can remain in the atmosphere for a few weeks to thousands of years, depending on the gas.

(U.S. EPA, 2017)

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

The Proposed Action is not expected to have a significant effect on climatic conditions. The State, through Act 234 and SB 559, has acknowledged that greenhouse gas emissions pose a statewide impact. While the Proposed Action will involve land uses that will indirectly result in the emission of greenhouse gases, global climate impacts are not anticipated due to the scope and scale of the Proposed Action. Emissions generated by the Proposed Action in combination with past, present, and reasonably probable future projects could contribute to these emissions.

Recognizing that climate change is thus cumulative in nature, DHHL will consider ways to incorporate state-of-the-art energy conservation and green practices to support the Proposed Action. DHHL will encourage lessees to consider renewable sources and passive energy-conserving measures such as natural ventilation, solar water heating, and photovoltaic energy. The Proposed Action will not interfere with the development of clean energy supplies, energy-efficient technologies, conservation practices, and other mitigative strategies.

From an environmental standpoint, replacement of vegetative surfaces with hardscapes associated with roadways, paved parking areas, and buildings may yield a tendency towards slightly increasing ambient air temperatures. To address this "heat island" effect, proposed landscaping and landscaped buffers will be integrated into the non-agricultural components of the proposed improvements. However, no significant impacts are expected regarding the "heat island" effect as roughly 150 acres of conservation space, 30 acres of park space, and majority agricultural uses are anticipated as part of the Proposed Action.

Outcomes of global climate change, including sea level rise as a natural hazard, are discussed in Section 3.5.

#### 3.2 GEOLOGY AND TOPOGRAPHY

The island of Maui was built by two major volcanoes, the older West Maui Mountains, also known as Mauna Kahalawai, and the more recently active Haleakalā. The isthmus of Maui is a narrow, gently sloping plain located between these two volcanoes. The isthmus was created by lava flows from Haleakalā banking against the older flank of Mauna Kahalawai. Much of the eastern and western sides of the isthmus consists of stream sediments (alluvium) washed down from the

slopes of the two volcanoes. Erosion on these slopes is dominated by the detachment of soil and rock from the mountain walls, whereupon sediments are transported downslope toward the isthmus. The development of broad fringing reefs in the bay between Mauna Kahalawai and Haleakalā add further complexity to the stratigraphy of the isthmus, in addition to sea level changes during the Pleistocene Epoch in response to the advance and retreat of continental glaciers. During glacial advances, more of Earth's water was trapped in glaciers as ice, leaving less water available to fill the ocean basins. As a consequence, global sea levels fell. During glacial retreats, more water was available and sea levels rose.

Elevations at the Master Plan Area range from approximately 740 feet above mean sea level (AMSL) along the eastern boundary of Master Plan Area to approximately 40 feet AMSL at the western boundary, with an average slope of approximately 6.6 percent.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant adverse impact to geology or topography is anticipated. Grading work will be undertaken to set roadway grades and adjacent grades where appropriate. Future design work will respect existing topography to the extent practicable, to minimize extensive cut and fill activity. Significant landform transformations in terms of cut and fill requirements will be minimized. All grading work will comply with applicable requirements of Chapter 20.08, Soil Erosion and Sedimentation of the Maui County Code (MCC).

The Proposed Action will require construction of new infrastructure, roadways, building pad areas, and drainage features. No increase in runoff from the Master Plan Area is anticipated as a result of the Proposed Action. Section 4.8.3 discusses existing and proposed drainage conditions. Furthermore, Low Impact Development (LID) design strategies will be considered at the Master Plan Area, which would further mitigate potential impacts.

While the Proposed Action will alter how the land is currently used, the proposed improvements are not expected to significantly impact the overall geological character of the region. Construction activities, such as grading, may alter the topography to accommodate the Proposed Action and address potential flooding concerns. See Section 3.5.1. Appropriate engineering, design and construction measures will be implemented to minimize potential erosion due to grading of soils during construction. All grading work will comply with applicable requirements of Chapter 20.08, Soil Erosion and Sedimentation of the Maui County Code (MCC). Further information on soils and grading is provided in Section 3.3.

#### 3.3 **SOILS**

Three primary soil suitability studies describe the physical attributes of land and their relative productivity for agricultural production in Hawai'i. These include the U.S. Department of Agriculture, Natural Resource Conservation Service's Soil Survey, the University of Hawai'i, Land Study Bureau's Detailed Land Classification and the State Department of Agriculture's Agricultural Lands of Importance to the State of Hawai'i system.

#### DHHL HONOKŌWAI MASTER PLAN

Final Environmental Assessment- Finding of No Significant Impact

#### 3.3.1 Natural Resource Conservation Service Soil Survey

According to the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Soil Survey, Lahaina silty clay and Kahana silty clay together make up over 50 percent of the Master Plan Area's soils. See Figure 7 for a map of the Master Plan Area's soils. A list of all soils present at the Master Plan Area is shown below.

#### Table 3-1: NRCS Soil Survey

Soil Unit Symbol	Soil Unit Name		
LaB	Lahaina silty clay, 3 to 7 percent slopes, MLRA 158 (Semiarid and Subhumid Low Mountain Slopes)		
КЬС	Kahana silty clay, 7 to 15 percent slopes		
LaC	Lahaina silty clay, 7 to 15 percent slopes, MLRA 158 (Semiarid and Subhumid Low Mountain Slopes)		
rRK	Rock land	9.5%	
MuB	Moloka'i silty clay loam, 3 to 7 percent slopes, MLRA 158 (Semiarid and Subhumid Low Mountain Slopes)		
rRR	Rough broken land	4.8%	
rRS	Rough broken and stony land	4.5%	
KbB	Kahana silty clay, 3 to 7 percent slopes	2.1%	
EaA	'Ewa silty clay loam, 0 to 3 percent slopes, MLRA 158 (Semiarid and Subhumid Low Mountain Slopes)		
MuC	Moloka'i silty clay loam, 7 to 15 percent slopes, MLRA 158 (Semiarid and Subhumid Low Mountain Slopes)		
РрА	Pūlehu silt loam, 0 to 3 percent slopes		
PsA	Pūlehu clay loam, 0 to 3 percent slopes, MLRA 163 (Alluvial Fans and Coastal Plains)		
W	Water > 40 acres	~0.0%	

#### 3.3.2 Land Study Bureau Detailed Land Classification

The University of Hawai'i, Land Study Bureau ("LSB") developed the Overall Productivity Rating, which classified soils according to five levels, with "A" representing the class of highest productivity soils and "E" representing the lowest. These letters are followed by numbers which further classify the soil types by conveying such information as texture, drainage and stoniness. The Master Plan Area is located primarily on lands designated "A" or very good. These lands have the highest productivity rating under the LSB classification system. In contrast, soils associated with gulch areas are generally designated "E" or very poor. See Figure 9.

#### 3.3.3 Agricultural Lands of Importance to the State of Hawai'i

In 1977, the State Department of Agriculture developed a classification system to identify Agricultural Lands of Importance to the State of Hawai'i (ALISH). The classification system is based primarily, though not exclusively, upon the soil characteristics of the lands. The three classes of ALISH lands are: "Prime", "Unique", and "Other", with all remaining lands termed "Unclassified". When utilized with modern farming methods, "Prime" agricultural lands have a soil quality, growing season, and moisture supply necessary to produce sustained crop yields economically. "Unique" agricultural lands possess a combination of soil quality, growing season, and moisture supply to produce sustained high yields of a specific crop. "Other" agricultural lands (of "importance to the State of Hawai'i") include those that have not been rated as "Prime" or "Unique". The majority of the soils underlying the Master Plan Area are designated as "Prime". Soils associated with gulch areas have not received a designation under the ALISH classification system. See Figure 8.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

A positive impact to soil resources is anticipated.

By reintroducing agriculture on lands currently lying fallow, the Proposed Action will allow for better maintenance of the Master Plan Area through the active management and irrigation of soils and productive agriculture operations.

The Honokōwai Master Plan will facilitate agriculture opportunities at the family, commercial, and industrial scales. The majority of the Master Plan Area will be used for agriculture and supporting uses, and the underlying soils make the Master Plan Area ideal for agricultural use. The return of these lands to agricultural uses will provide mitigation for long term soil erosion through use of windbreaks and crop rotation cycles that avoid leaving fallow land open and exposed to wind. The commercial/industrial designation of portions of the Master Plan Area provides for flexible use and could support opportunities in retail, agribusiness processing, packaging, and/or marketing of agricultural goods including those produced by DHHL's agriculture lessees.

MUSYM

LaC - Lahaina silty clay, 7-15% slopes

To mitigate adverse temporary impacts to soil resources during the construction phase, the following best management practices (BMPs) will be required by DHHL of its contractors:

- Prevent cement products, oil, fuel and other substances from falling or leaching into the ground. Remove all construction debris and toxic substances daily to prevent entry into the ground.
- Maintain vehicles and equipment to prevent oil or other fluids from leaking. Concrete trucks and tools used for construction should be rinsed offsite.
- Properly install and maintain erosion control barriers such as silt fencing or straw bales.
- Disturb the smallest area possible.
- Retain ground cover until the last possible date. Stabilize denuded areas by sodding or planting as soon as possible. Use high seeding rates to ensure rapid stand establishment.
- Apply any pesticides only during dry periods or low rainfall to minimize chemical runoff (applied only by certified applicators).
- Preserve existing drainage conditions.
- Comply with National Pollutant Discharge Elimination System (NPDES) permitting requirements for construction exceeding one acre.

During the Draft EA consultation period, DWS provided a list of standard BMPs to ensure water quality and pollution prevention, including agricultural business BMPs. Site users of agricultural areas (including agricultural businesses) will be encouraged to implement BMPs for agricultural chemicals including pesticides, to minimize environmental impacts.

Contractors will be required to provide BMPs as part of their contracts. All construction activities will comply with all applicable Federal, State, and County regulations and rules for erosion control.

## 3.4 SURFACE WATER, WETLANDS, AND GROUNDWATER

#### Surface Water

Surface water generally flows in an east-west (mauka to makai) direction at the Master Plan Area. Honokōwai Gulch separates the north and south portions of the Master Plan Area. The main channel of Honokōwai Stream is located within the gulch, with a tributary (Kanaunau Stream and Gulch) flowing through the south portion of the Master Plan Area and joining the main channel approximately one-half mile from Honoapi'ilani Highway. Refer to Figure 10. Both Honokōwai Stream and Kanaunau Stream are identified as perennial streams by the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI). The USFWS classifies the main channel of Honokōwai Stream as a combination of Riverine and Freshwater Forested/Shrub Wetland. Areas of both Riverine and Freshwater Forested/Shrub Wetland occur within the Master Plan Area, where Honokōwai Stream passes through the Master Plan Area. The confluence of the two channels (outside the Master Plan Area) is an area designated as a Freshwater Pond. Field studies and information collected for the Master Plan Area's Archaeological Reconnaissance Survey note that although both streams at one time were perennial, due to water diversions they flow intermittently. See Section 4.1.

#### **LEGEND**

## Master Plan Area Wetlands Estuarine and Marine Deepwater Estuarine and Marine Wetland Freshwater Forested/Shrub Wetland Freshwater Pond Riverine

## Figure 10 DATE: 6/8/ Wetlands and Surface Water DATE: 6/8/2021

## DHHL Honokōwai Master Plan

Department of Hawaiian Home Lands Linear Scale (Feet) lorth 2,000 500 1,000 0

Honokōwai Ahupua'a, Maui

North of Honokōwai Gulch and stream is Onepeha Gulch. It is not mapped as a NWI resource, but does feed in to the Honokōwai Reservoir.

Situated in the midst of the north portion of the Master Plan Area (but excluded from the Master Plan Area) is Honokōwai Reservoir, which the NWI classifies as Freshwater Pond and Riverine Wetland. A portion of land associated with Honokōwai Reservoir, designated Riverine Wetland, may occur within the Master Plan Area.

On the Master Plan Area's eastern (mauka) boundary (generally outside the Master Plan Area) is an agricultural pond which the NWI designates as a Freshwater Pond. The ditch and canal system that feeds it are designated a Riverine Wetland. A portion of these wetlands may occur within the Master Plan Area.

The Master Plan Area's western (makai) boundary is located a minimum of approximately onequarter mile from the nearest coastline which is classified as a Class A water ("open coastal waters between Pu'u Olai and Nakalele Point"). According to DOH Water Quality Standards, "It is the objective of class A waters that their use for recreational purposes and aesthetic enjoyment be permitted as long as it is compatible with the protection and propagation of fish, shellfish, and wildlife, and with recreation in and on these waters" (§11-54-03, HAR).

The State has a General Policy of Water Quality Antidegradation (§11-54-1.1, HAR), which states that existing uses and the level of water quality necessary to protect them, shall be maintained and protected. In the case that water quality exceeds levels necessary to protect aquatic habitats, water quality may not be degraded without director approval.

All discharges related to the Proposed Action's construction or operation activities, whether or not National Pollutant Discharge Elimination (NPDES) system permit coverage and/or Section 401 Water Quality Certification are required, must comply with the Water Quality Standards, specified in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55.

#### Groundwater

There are five major public water systems in Maui County, operated by the Department of Water Supply (DWS): Central Maui, Upcountry Maui, West Maui, East Maui, and Moloka'i. Water sources consist of streams (surface water) and aquifers (groundwater). The majority of the water supplied by DWS comes from groundwater, which is typically more abundant and reliable and less expensive to purify than surface water. (County of Maui, 2010) Most of the public water supply in West Maui is pumped from the Lahaina aquifer fresh water lens. Most streams of West Maui receive groundwater discharge from a dike-impounded water body, but much of this water is diverted for non-stream uses. The Lahaina aquifer water budget is reliant on rain and fog for about 96% of groundwater recharge, with the remainder from irrigation and other activities. (County of Maui, 2016)

The State of Hawai'i Department of Health (DOH) classifies groundwater under an aquifer coding system to identify and describe these aquifers. The Master Plan Area overlies the Honokōwai Aquifer System, a subset of the Lahaina Aquifer Sector. The great majority of the Master Plan

Area overlies a basal unconfined flank aquifer, currently used for drinking, with fresh salinity. This aquifer is considered irreplaceable and has high vulnerability to contamination. A small portion of the Master Plan Area is underlain by two basal unconfined aquifers: a flank aquifer overlain by a sedimentary aquifer. The sedimentary aquifer has no potential use, with no drinking or ecological value, and is of high salinity. The aquifer is considered replaceable and has high vulnerability to contamination. The underlying flank aquifer has no potential use, with no drinking or ecological value, and is of moderate salinity. The aquifer is considered replaceable and has high no drinking or ecological value, and is of moderate salinity. The aquifer is considered replaceable and has high has moderate vulnerability to contamination.

The Department of Health Safe Drinking Water Branch administers the Underground Injection Control (UIC) program to protect the quality of the state's underground drinking water sources from chemical, physical, radioactive, and/or biological contamination that could originate from injection well activity. Department of Health Administrative Rules, Title 11, Chapter 23 provides conditions governing the location, construction, and operation of injection wells so that injected fluids do not migrate and pollute underground sources of drinking water. The boundary between exempted aquifers and underground sources of drinking water is generally referred to as the UIC Line. Restrictions on injection wells differ, depending on whether the area is mauka or makai of the UIC Line.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No impact to surface water or wetlands is anticipated. The intent for drainage of the Master Plan Area is to limit the need for extensive grading as much as possible and to minimize the alteration of the existing drainage pattern. Section 4.8.3 discusses existing and proposed drainage conditions. Roughly 150 acres of conservation space, 30 acres of park space, and majority agricultural uses are anticipated as part of the Proposed Action.

DHHL also intends to utilize surface water from the Honokōhau Ditch and Honokōhau Stream to provide non-potable irrigation for homestead farms. DHHL intends to minimize its diversion of stream water by utilizing recycled water provided by the Lahaina Wastewater Reclamation Facility.

No adverse impact to groundwater is anticipated. Construction of underground injection wells is not proposed. In any case, most of the Master Plan Area is above the UIC Line. See Figure 17. The Proposed Action is anticipated to have a positive impact with regard to Lahaina Wastewater Reclamation Facility (LWWRF) existing injection wells, in that DHHL's use of a substantial quantity of R-1 quality effluent from the LWWRF (see Section 4.8) would reduce the volume of R-1 effluent disposed of through injection wells. Refer to Section 4.8.2 for a detailed discussion of wastewater impacts.

During the Draft EA consultation period, The State of Hawai'i Commission on Water Resource Management (CWRM) commented:

There may be the potential for ground or surface water degradation/ contamination and recommend that approvals for this project be conditioned

upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.

DHHL will comply with all applicable DOH regulations and requirements related to mitigating potential contamination to ground and surface water sources.

All discharges related to the construction and operation of the Proposed Action will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR. Any potential impacts to Class A waters caused by the construction and/or operation of the Proposed Action will meet the provisions of the: a) anti-degradation policy (Chapter 11-54-1.1, HAR); b) designated uses (Chapter 11-54-3, HAR); and c) water quality criteria (Chapter 11.54-4 through 11-54-8, HAR).

Pursuant to the Clean Water Act, a Section 401 Water Quality Certification from the State Department of Health, Clean Water Branch will be obtained if it is determined that the Proposed Action may result in any discharge into navigable waters or as otherwise triggered.

To mitigate impacts to surface and groundwater resources during the construction phase, the following best management practices (BMPs) will be required by DHHL of its contractors:

- Prevent cement products, oil, fuel and other substances from falling or leaching into the ground. Remove all construction debris and toxic substances daily to prevent entry into the ground.
- Maintain vehicles and equipment to prevent oil or other fluids from leaking. Concrete trucks and tools used for construction should be rinsed offsite.
- Properly install and maintain erosion control barriers such as silt fencing or straw bales.
- Disturb the smallest area possible.
- Retain ground cover until the last possible date. Stabilize denuded areas by sodding or planting as soon as possible. Use high seeding rates to ensure rapid stand establishment.
- Apply any pesticides only during dry periods or low rainfall to minimize chemical runoff (applied only by certified applicators).
- Preserve existing drainage conditions.
- Comply with National Pollutant Discharge Elimination System (NPDES) permitting requirements for construction exceeding one acre.
- Contractors will be required to provide BMPs as part of their contracts.

To mitigate any long-term impacts to Maui's groundwater resources, DHHL proposes that runoff from subsistence agricultural lots be directed to grassed swales. Parcels designated for multi-family residential, parks, commercial and industrial development will be required to mitigate the 50-year, 1-hour storm on site with drainage above that to be conveyed to the grassed swale system. Use of grassed swales (as an alternative to pipes) allows water to infiltrate and return at least in part to the groundwater system. Plans will include a 100-foot setback from gulches, for conservation purposes.

#### DHHL HONOKŌWAI MASTER PLAN

#### Final Environmental Assessment- Finding of No Significant Impact

Use of R-1 recycled water will also help to minimize withdrawals of groundwater and surface water resources. The County of Maui is making improvements to its R-1 system which will make R-1 water use available to Master Plan Area lands makai of the MLP 2-million gallon mid-level reservoir. The County continues to invest in regional infrastructure to build R-1 infrastructure which will allow greater opportunity for water re-use on DHHL lands. See Sections 0, 4.8.2, and 4.8.3.

Additionally, site users at the Master Plan Area will be encouraged to consider the following water conservation measures:

- Facility design to maximize water efficiency;
- Low-impact development (LID) approach to landscape and hardscape design;
- Water efficient fixtures;
- Dual flush toilets;
- Leak detection sensors and alarms;
- Minimizing landscaped areas requiring extensive irrigation;
- Use of landscaping materials with low water needs (xeriscaping and embracing the use of native plants);
- Smart irrigation systems and moisture sensing feedback technology; and
- Use of automatic drip irrigation as the predominant delivery system.

DHHL will embrace the use of native plants as a means of water conservation and to support cultural practices; this may positively impact flora resources.

During the pre-assessment consultation period, the State Department of Land and Natural Resources – Division of Aquatic Resources suggested mitigations to protect the coral reef located downstream of the Master Plan Area:

- 1) setting back all development activities 100-200 ft from the edge of the gulch wall...
- 2) planning for the storage and use of R-1 water from the nearby Lahaina wastewater reclamation facility will assist with providing a constructive use for this treated wastewater which is currently being disposed of into injection wells...
- 3) planning for and deploying a Low Impact Design approach to stormwater management within the developed areas.

The mitigations measures described above align with these suggestions.

Refer to Section 0 for a discussion of consistency with State and County water plans.

#### 3.5 NATURAL HAZARDS

Maui is susceptible to potential natural hazards such as flooding, tsunami inundation, hurricanes, earthquakes, and volcanic eruptions. The State Department of Defense, Office of Civil Defense operates a system of civil defense sirens throughout the state to alert the public of emergencies

## DHHL Honokōwai Master Plan

#### Final Environmental Assessment- Finding of No Significant Impact

and natural hazards, particularly tsunamis and hurricanes. The closest siren to the Master Plan Area is located less than 300 feet from the Master Plan Area, at the County's LWWRF along Honoapi'ilani Highway, with another located approximately 0.2 miles from the Master Plan Area, on Lower Honoapi'ilani Road. See Figure 11.

The County Civil Defense Agency is responsible for administering and operating the various local, state, and federal civil defense programs for the County. This includes planning, preparing, and coordinating civil defense operations in meeting disaster situations and coordinating postdisaster recovery operations. The County's 2015 Hazard Mitigation Plan is a master plan for the County that:

- Identifies the hazards and risks posed by natural and technological disasters;
- Identifies hazard mitigation actions and activities to reduce losses from such disasters; and
- Establishes priorities and a long-term sustained process to implement those actions.

The County's Hazard Mitigation Plan focuses on mitigating hazards to critical facilities and special populations or areas. Critical facilities include those public and private facilities that need to be operational during and after a hazard event to meet public health and safety needs, or to speed economic recovery. These facilities include the following:

- Emergency response facilities: Civil Defense Emergency Operations Center (EOC), emergency shelters, police, fire and Emergency Medical Service (EMS) stations, hospitals, and Department of Public Works baseyards.
- Government facilities and services: Government buildings and schools that are all important for maintaining daily operations and preserving the economy.
- Critical infrastructure and lifeline facilities: transportation (harbors, airports, roads/bridges), energy (electrical, fuel, gas), communication (wired/cabled telecommunication, wireless), water, and wastewater.
- Other Important Assets: debris clearing and disposal, car rentals, buses, financial institutions, survival and building supplies.

There are no objectives or priorities in the Maui Hazard Mitigation Plan that specify implementation requirements for the Proposing Agency.

#### 3.5.1 Flooding

Flood areas are identified by the Flood Insurance Rate Map (FIRM) prepared by the Federal Emergency Management Agency (FEMA), National Flood Insurance Program. According to the FIRM, the vast majority of the Master Plan Area is designated Zone X, indicating "areas of minimal flood hazard" outside the 500-year (0.2 percent annual chance) floodplain. A section of Honokōwai Stream crossing through a portion of TMK parcel (2) 4-4-001:015 is designated Zone A, indicating "areas subject to inundation by the 1 percent annual chance flood event" where no Base Flood Elevation is determined. See Figure 12.

#### LEGEND

#### Master Plan Area

Zone A: No BFE determined.

Zone AE: BFE determined.

Zone AO: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.

Zone V: Coastal flood zone with velocity hazard (wave action); Zone VE: Coastal flood zone with velocity inzeria (wave action); Zone VE: Coastal flood zone with velocity hazard (wave action);

BFE determined. Zone AEF: Floodway areas in Zone AE. The floodway is the

channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from U% annual chance flood. Zone X: Areas determined to be outside the 0.2% annual chance

floodplain.

OTHER FLOOD AREAS

Zone D: Unstudied areas where flood hazards are undeter-mined, but flooding is possible. No mandatory flood insurance purchase apply, but coverage is available in participating commu-nities.

## DATE: 11/4/2019 Figure 12 Flood Insurance Rate Map (FIRM)

#### DHHL Honokowai Master Plan Honokowai Ahupua'a, Maui

Department of Hawaiian Home Lands North Linear Scale (Feet) 500 1,000 2,000 0

Source: DLNR DAR, 2008. FEMA FIRM panels 1500030351F - 2012, 1500030352E - 2009. Disclaimer: This graphic has been prepared for general planning purposes only.

#### DHHL HONOKŌWAI MASTER PLAN

Final Environmental Assessment- Finding of No Significant Impact

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impacts are anticipated. To mitigate any potential impact of future flooding, no habitable structures will be built in the Zone A portion of the Master Plan Area. Flood hazards are identified by the Flood Insurance Rate Map (FIRM) prepared by the Federal Emergency Management Agency (FEMA), National Flood Insurance Program. According to the FIRM, most of the Master Plan Area is designated Zone X, which denotes "areas of minimal flood hazard" outside the 500-year (0.2 percent annual chance) floodplain. See Figure 12. Drainage infrastructure is discussed in Section 4.8.3.

#### 3.5.2 Tsunamis

No impacts are anticipated. The Master Plan Area is located in the Tsunami Evacuation Safe Zone (outside the Tsunami Evacuation Zone). A small area at the southwestern edge of the Master Plan Area is located within the Extreme Tsunami Evacuation Zone, which is an area deemed to be at risk during an Extreme Tsunami which is a new class of seismic events which has been modeled but not observed historically. In the event of an Extreme Tsunami Warning, this area should be evacuated.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant adverse impacts with respect to tsunami hazards are anticipated. The Honokōwai Master Plan will not exacerbate any hazard conditions and is not within the tsunami evacuation zone. Generally, the Master Plan Area is also outside the extreme tsunami evacuation zone. Land uses within the extreme tsunami evacuation zone include Community Use – Commercial, and Industrial use.

#### 3.5.3 Hurricanes

Records show that strong windstorms have struck all major islands in the Hawaiian Island chain since the beginning of history. The first officially recognized hurricane in Hawaiian waters was Hurricane Hiki in August of 1950. Since 1980, two hurricanes have had a devastating effect on Hawai'i: Hurricane 'Iwa in 1982 and Hurricane 'Iniki in 1992.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impacts are anticipated. The Honokōwai Master Plan will not exacerbate any hazard conditions with respect to hurricanes. To mitigate potential damage caused by hurricanes, new buildings at the Master Plan Area will be constructed in compliance with the Uniform Building Code and other County, State, and Federal standards.

#### 3.5.4 Earthquakes

In Hawai'i, most earthquakes are linked to volcanic activity rather than the movement of tectonic plates. Each year, thousands of earthquakes occur in Hawai'i, but the vast majority of them are

only detectable with highly sensitive instruments. Nevertheless, moderate and disastrous earthquakes have occurred in Hawai'i.

The 1938 Maui Earthquake, with a magnitude of between 6.7 and 6.9 and an epicenter six miles north of Maui, created landslides and forced the closure of Hāna Highway. Damaged water pipes and ground fractures were reported in Lahaina.

A more recent series of earthquakes, with magnitudes of 6.7 and 6.0, occurred at Kīholo Bay (Hawai'i Island) on October 15, 2006. On Maui, these earthquakes caused a closure of the Pa'ihi Bridge between Kīpahulu and Hāna, as well as a rockslide over the highway between Kīpahulu and Kaupō, cutting utility lines and undermining sections of the narrow roadway. The road between Kīpahulu and Kaupō was shut down in December 2006 and not re-opened until October 2008.

On May 4, 2018, a series of earthquakes occurred, including a powerful magnitude 6.9, hit Hawai'i Island, where the Kilauea volcano had been releasing lava into residential areas resulting in the evacuation of hundreds of residents. The USGS said the strongest tremor, magnitude 6.9, occurred at 12.32 pm.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impacts are anticipated. The Honokōwai Master Plan will not exacerbate any hazard conditions with respect to earthquakes. To mitigate potential damage caused by earthquakes, new buildings at the Master Plan Area will be constructed in compliance with the Uniform Building Code and other County, State, and Federal standards.

#### 3.5.5 Volcanic Hazards

No significant impacts are anticipated. The Honokōwai Master Plan will not exacerbate any hazard conditions with respect to hurricanes. Volcanic hazards on Maui are generally minimal due to the dormant status of the island's volcanoes. According to the USGS, the eruption threat assessment for Haleakalā is in the Moderate Threat Group. (USGS, 2018)

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impacts are anticipated. The Honokōwai Master Plan will not exacerbate any hazard conditions with respect to volcanic activity.

#### 3.5.6 Climate Change

While sea level rise models are inherently uncertain, sea level rise due to human-driven climate change is occurring and will continue to occur in Hawai'i and throughout the world. Sea level has risen over the last century on each island at rates varying from 0.5 to 1.3 inches per decade. (UH Sea Grant, 2014) For the foreseeable future, the planet's warming atmosphere (see Section 3.1) will cause increased melting of ice sheets and snow, in addition to thermal expansion of ocean water, resulting in sea level rise. The Hawai'i Sea Level Rise Vulnerability and Adaptation Report

# **LEGEND**

### Master Plan Area 3.2 ft SLR Exposure Area

## Figure 13 Sea Level Rise (SLR) Exposure Area DHHL Honokōwai Master Plan DATE: 6/8/2021

2,000

Department of Hawaiian Home Lands

Linear Scale (Feet) 0 500 1,000 lorth

Honokōwai Ahupua'a, Maui

provides a statewide overview of vulnerability to sea level rise and the potential impacts from chronic flooding based on modeling coastal flooding with sea level rise due to passive flooding, annual high wave flooding, and coastal erosion in the Sea Level Rise Exposure Area (SLR-XA) with up to 3.2 feet of sea level rise and depicts flood hazards that may occur in the mid- to latter-half of this century. According to the report, this "timeframe is within the expected lifespan of most new construction and much of our existing development. It should be noted that sea level rise projections greater than 3.2 feet are "physically plausible" by the end of the century, based on the latest climate science..." (Hawai'i Climate Change Mitigation and Adaptation Commission, 2017)

In addition to sea level rise, human-driven climate change will result in warmer air temperatures, a decrease in prevailing northeasterly trade winds, a decline in rainfall and resulting decline in water resources and aquatic ecosystems, warming and acidifying seawater, and stress to human health. (UH Sea Grant, 2014)

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

The Honokōwai Master Plan will not adversely impact climate change and related issues including such as warmer air temperatures, a decrease in prevailing northeasterly trade winds, a decline in rainfall and resulting decline in water resources and aquatic ecosystems, warming and acidifying seawater, and stress to human health.

No impacts to the Master Plan Area are anticipated. According to the Hawai'i Sea Level Rise Vulnerability and Adaptation Report (Hawai'i Climate Change Mitigation and Adaptation Commission, 2017), the Master Plan Area is outside the SLR-XA for 3.2 feet of sea level rise. See Figure 13.

To mitigate water resource-related stress resulting from drought- or storm-related water supply reduction and/or changing rainfall patterns, DHHL and users at the Master Plan Area will be encouraged to consider the following water conservation measures:

- Facility design to maximize water efficiency;
- Low-impact development (LID) approach to landscape and hardscape;
- Water efficient fixtures;
- Dual flush toilets;
- Leak detection sensors and alarms;
- Minimizing landscaped areas requiring extensive irrigation;
- Use of landscaping materials with low water needs (xeriscaping and embracing the use of native plants);
- Smart irrigation systems and moisture sensing feedback technology; and
- Use of automatic drip irrigation as the predominant delivery system.

DHHL will also embrace the use of native plants as a means of water conservation and to support cultural practices.

Source: West Maui Hazard Assessment - Hawaii Wildfire Management Organization, 2013. Disclaimer: This graphic has been prepared for general planning purposes only.

**Moderate Hazard** 

Extreme Hazard

**High Hazard** 

Department of Hawaiian Home Lands

#### 3.5.7 Wildfire

Maui, particularly West Maui, has experienced a number of serious wildfires in recent years resulting in road closures, forced evacuations, and property damage. Most fires in Hawai'i start in unmanaged non-native grasslands and shrublands, which have increased as Hawaii's agricultural footprint has declined. Fires on the island burned a total of 17,500 acres between July and October 2019. (Honolulu Civil Beat, 2019) In August 2018, multiple fires and strong winds from Hurricane Lane resulted in the emergency evacuation of a storm shelter and the loss of 21 residential structures, 27 vehicles, and 150 acres of active farmland. (Pacific Fire Exchange, 2019)

The Hawai'i Wildfire Management Organization (HWMO) designates a small area at the Master Plan Area's western boundary as High Hazard with regard to its Fire Environment Rating Total. This score is based on slope, rainfall, wind speed and direction, seasonal hazards, ignition risk, and topography. See Figure 14. The same area is designated as Low Hazard with regard to HWMO's Fire Protection Hazard Total—based on water source availability, response time, fire department training, wildland firefighting capability, interagency cooperation, local emergency operations, community planning and ordinances, and community efforts. (Hawaii Wildfire Management Organization, 2015) The remainder of the Master Plan Area is undesignated.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

Wildfires will have a mitigable impact on the Master Plan Area. The Honokōwai Master Plan will not exacerbate any hazard conditions with respect to fire. Rather, the Proposed Action is likely to reduce local fire risk and spread through proper maintenance of buffer areas around gulches, general maintenance of the Master Plan Area, the return of active agriculture and other irrigated areas, and the establishment of a 30-foot defensible space between proposed structures and undeveloped lands. Refer also to Section 4.10.2.

During the pre-assessment consultation period, the County of Maui Department of Fire and Public Safety commented:

Where the proposed project abuts undeveloped lands, fire prevention measures shall be incorporated into the proposed project to address the concern of wildland fires. A minimum of 30 feet of defensible space shall be provided between proposed structures and the undeveloped lands. Our office can assist with this matter.

Our office also reserves the right to comment on the proposed project during the subdivision process and the building permit review process when detailed plans for this project are routed to our office for review. At that time, fire department access, water supply for fire protection, and fire and life safety requirements will be addressed.

Refer to Appendix A1 for DHHL's response. A minimum of 30 feet of defensible space will be provided between proposed structures and undeveloped lands. DHHL and its technical consultants will consult with the County of Maui Department of Fire and Public Safety as needed.

During the Draft EA consultation period, the County of Maui Planning Department commented: The Hawaii (sic) Wildfire Management Organization (HWMO) considers the presence of existing development when identifying fire hazard areas. The Master Plan Area is directly adjacent to a High Hazard area. It should be made clear in the FEA that fire hazard is critical in this area

DHHL acknowledges that developed areas of Kā'anapali, west of the Master Plan Area, are designated as High Hazard Areas.

#### 3.6 FLORA AND FAUNA

The Master Plan Area does not contain any areas designated as Critical Habitat by the US Fish and Wildlife Service (USFWS). See Figure 15. In September and October 2018, DHHL's biological consultant Starr Environmental conducted a survey of flora and fauna at the Master Plan Area (Appendix C).

#### Flora

The Master Plan Area is primarily vegetated with non-native plants. All native plant species identified within the Master Plan Area are relatively common in the state and are of no particular conservation concern. No Federally listed Threatened or Endangered plant species were found on the Master Plan Area.

The Master Plan Area is lying fallow and hosts the following plant community.

Dominant non-native grasses include Guinea grass (Megathyrsus maximus), sour grass (Digitaria insularis), and buffel grass (Cenchrus ciliaris). Herbaceous plants include hairy horseweed (Conyza bonariensis), saltbush (Atriplex suberecta), partridge pea (Chamaecrista nictitans), smooth leaved rattlepod (Crotalaria pallida), and scarlet boerhavia (Boerhavia coccinea).

Shrubs include haole koa (Leucaena leucocephala), a non-native species which can form tall thickets especially in and near gulches. Dog tail (Buddleia asiatica), sourbush (Pluchea carolinensis), and tree tobacco (Nicotiana glauca) are also present. Non-native vines include glycine (Neonotonia wightii), little bell (Ipomoea triloba), bitter melon (Momordica charantia), moon flower (Ipomoea alba), and cow pea (Macroptilium atropurpureum).

Trees are becoming established in some areas of the Master Plan Area, overtaking grasses and shrubs. Most species of tree at the Master Plan Area are non-native species including Christmasberry (Schinus terebinthifolius), silky oak (Grevillea robusta), Manila tamarind (Pithecellobium dulce), Chinaberry (Melia azedarach), Java plum (Syzygium cumini), lemon-scented gum (Corymbia citriodora) and kiawe (Prosopis pallida).

Native trees included the wiliwili tree (Erythrina sandwicensis). Native shrubs included 'a'ali'i (Dodonaea viscosa), 'uhaloa (Waltheria indica), pōpolo (Solanum americanum), and 'ilima (Sida fallax). Native herbaceous plants included 'ala'ala wai nui (Peperomia blanda) and 'iwa'iwa fern (Doryopteris decipiens). Native vines included koali 'awa (Ipomoea indica) and pā'ū o Hi'iaka (Jacquemontia sandwicensis).

0 0.25 0.5

#### Mammals

The native, endangered Hawaiian hoary bat (Lasiurus cinereus semotus) and typically roosts in tall trees in sheltered areas. While surveys were not conducted to identify the presence of any bats, the biological consultant notes that they can generally be found across the island of Maui. Hawaiian hoary bats give birth to and raise their young in the summer. These bats typically roost in trees 15 feet or taller. The bulk of the Master Plan Area has low growing vegetation, as the area was recently a pineapple plantation. However, habitat at the Master Plan Area may become more attractive for the bats over time, if trees are allowed to grow taller and are not removed. Additionally, portions of gulches within the Master Plan Area may already provide an attractive habitat. Tall, mature trees are currently growing in the gulch areas.

No mammals were observed or heard during the biological survey. Old cat (Felis domesticus) scat was observed along an existing dirt road. Other mammals likely to utilize the Master Plan Area include dogs (Canis familiaris), wild pigs (Sus scrofa), axis deer (Axis axis), rats (Rattus spp.), mice (Mus domesticus), and mongooses (Herpestes javanicus).

#### Birds

The Master Plan Area is primarily inhabited by common, non-native birds. Some of the more prevalent of these are Scaly-breasted Munia (Lonchura punctulata) and Chestnut Munia (Lonchura atricapilla), that regularly flew by in flocks up to half a dozen birds during the biological survey. Zebra Doves (Geopelia striata) and Spotted Doves (Spilopelia chinensis) are also present. Cattle Egrets (Bubulcus ibis) were observed flying overhead near the County's water treatment facility. Calls of the Gray Francolins (Francolinus francolinus) were heard.

The biological consultant observed several dozen shorebirds foraging and resting in and near the County's water treatment facility. Of these, the most abundant was Pacific Golden-Plover or Kōlea (Pluvialis fulva). A Ruddy Turnstone or Akekeke (Arenaria interpres), and a Wandering Tattler or 'Ūlili (Tringa incana) were also observed.

The Hawaiian Short-eared Owl or Pueo (Asio flammeus sandwichensis) and Hawaiian Goose or Nēnē (Branta sandvicensis) were not observed at the Master Plan Area but could potentially utilize parts of the shorter grassland areas for foraging and nesting.

Hawaiian Petrels or 'Ua'u (Pterodroma sandwichensis) and other seabirds typically raise their young in upland sites of West Maui. After feeding at sea during the day, the birds fly to the mountain burrows at night. Based on standard guidance from State and Federal agencies, DHHL is aware that seabirds in the general vicinity may traverse the Master Plan Area at night during the breeding, nesting and fledging seasons (March 1 to December 15). Species of such seabirds may include the endangered Hawaiian petrel (Pterodroma sandwichensis), endangered band-rumped storm-petrel (Oceanodroma castro), and the threatened Newell's shearwater (Puffinus newelli). These birds are known to be disoriented by bright lights, strike tall structures, become injured, and end up grounded where they become vulnerable to vehicle strikes and predators. Between September 15 and December 15, fledging young birds are particularly vulnerable to these threats.

#### Insects

Conspicuous insects at the Master Plan Area include non-native butterflies such as the monarch butterfly (Danaus plexippus), large orange sulphur (Phoebis agarithe), bean butterfly (Lampides boeticus), and lesser grass blue butterfly (Zizina otis).

A number of dragonfly-like insects were observed during the survey, especially in areas near ditches and reservoirs. Most were non-native including the familiar bluet (Enallagma civile), roseate skimmer (Orthemis ferruginea), and black saddlebags skimmer (Tramea lacerata). The native pinao or green darner dragonfly (Anax sp.) was also observed. The damselflies and dragonflies encountered on the Master Plan Area are all common in Hawai'i.

Native fancy-cased moths (Hyposmocoma sp.) are present on large stones and rock bands. These cryptic native moths are able to survive in some of the most disturbed landscapes in Hawai'i. They are abundant and not of conservation concern. While not observed, there is the chance the native green blue butterfly (Udara blackburni) could utilize the 'a'ali'i at the Master Plan Area for breeding.

A few dozen tree tobacco (Nicotiana glauca) plants were observed. Although non-native and often considered a weed, tree tobacco can be a host plant for the larvae of the native and endangered Blackburn's sphinx moth (Manduca blackburni). There are two general areas of tree tobacco plants, both near roads in the lowest portion of the Master Plan Area. In the north portion of the Master Plan Area, tree tobacco occurs where the main dirt road heads uphill. In the south portion of the Master Plan Area, the plants occur around the gravel parking lot at the baseyard and the nearby paved parking lot up the hill. Some leaves showed signs of insect chewing, however no frass, eggs, larvae, or adults of the Blackburn's sphinx moth were observed. The biological consultant noted that timing was not optimal to search for Blackburn's sphinx moth eggs and larvae, given that most moths are usually pupating in the soil at the time the survey was conducted.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant adverse impact to botanical resources is anticipated. All presently observed native plant species at the Master Plan Area are relatively common in the state and are of no particular conservation concern. The Master Plan Area's gulches hold potential for ecological restoration, with small remnant patches of native plants still persisting that could be protected and expanded. Many of these native plants provide lei material and other potential resources for people and native insects. The biological consultant observed that many of the native plant species found in the area could be used in landscaping, as they are well adapted to the area.

As noted in Section 4.2, the Proposed Action may have a positive impact with regard to ethnic and/or native species, particularly plants, resulting from the intentional reintroduction of traditional practices and supporting resources.

If DHHL becomes aware of the presence of protected species, site users, onsite staff, and contractors will be notified.

No significant adverse impact to fauna (including insects, birds, and mammals) is anticipated, however DHHL will undertake mitigation measures as described below. The Hawaiian hoary bat's Endangered status provides special protections and some habitat considerations that ensure that they are not harmed or killed. The USFWS has jurisdiction over Endangered species under the authority of the Endangered Species Act (1973). These bats are wide ranging and may temporarily use this habitat in response to spikes in populations of nocturnal flying insects which they prey upon. These bats breed and raise their young between June 1 and September 15. Adults place their immature young in woody vegetation during the night when they forage, and tend to them during the day. To mitigate potential impacts to the bats, contractors at the Master Plan Area will be instructed to avoid site clearing activities between June 1 and September 15. If site clearing must occur during this time, the DLNR Division of Forestry and Wildlife will be consulted before disturbance, removal or trimming of woody vegetation taller than 15 feet. Furthermore, the bats forage for insects as low as three feet to higher than 500 feet above the ground, and therefore barbed wire will not be used for fencing during construction to mitigate harm to the bats caused by entanglement. Use of alternatives to barbed wire will be encouraged.

Neither Nēnē nor Pueo were observed at the Master Plan Area, but to mitigate any impacts to these birds, reduced speed limits will be posted if any are found to be present. If breeding is found to be occurring at the Master Plan Area, the DLNR will be contacted for guidance.

To mitigate impacts to seabirds, DHHL will utilize appropriate exterior lighting such as hooded lights and avoidance of excessive lighting. Where feasible, outdoor lights at will be fully shielded so the bulb can only be seen from below bulb height, and only used when necessary. Nighttime construction will not occur between September 15 and December 15.

It is possible that Blackburn's sphinx moths were present during the biological survey, but dormant in chrysalis form in the soil beneath the tree tobacco host plants. These plants should be examined again between November and April (the latter part of the wet season) to get a more definitive reading of their presence or absence. To mitigate any potential impacts to the Blackburn's sphinx moth, DHHL will follow all USFWS guidance and, if necessary, seek consultation with the USFWS prior to site clearing to address an appropriate plan for removal of existing tobacco plants. (The USFWS will be contacted for additional guidance, should moths or host plants over three feet in height be identified. Should no moths or host plants be identified, DHHL will take measures to avoid attracting moths and prohibit tree tobacco from entering the Master Plan Area.)

It should be noted that the Master Plan Area is located approximately 1,000 feet from Kapalua Airport at its closest point. As such, DHHL will restrict agricultural activities that could attract wildlife that are potential hazards to aircraft operations. (Doing so will also benefit wildlife.)

## 4 DESCRIPTION OF THE HUMAN ENVIRONMENT, POTENTIAL IMPACTS, AND MITIGATION MEASURES

This section describes the existing conditions of the human environment, preliminary potential impacts of the Proposed Action, and preliminary mitigation measures to minimize any impacts.

#### 4.1 ARCHAEOLOGICAL AND HISTORIC RESOURCES

ASM Affiliates (ASM) conducted an archaeological reconnaissance survey of the Master Plan Area (Appendix C). The survey was conducted in accordance with Hawai'i Administrative Rules Chapter 13-275-5, HAR (Rules Governing Procedures for Historic Preservation Review for Archaeological Inventory Surveys and Reports) and included a literature review of pertinent historical accounts and other archaeological assessments in the region. Based on the archaeological survey, a number of sites, both historic and precontact, were identified. The report concluded that an archaeological inventory survey (AIS) would likely be required, pursuant to Hawai'i Administrative Rules (HAR) 13§13-275. The AIS would evaluate the identified sites and presences of historic properties within the Master Plan Area.

The archaeological reconnaissance survey delineates two distinct landscape feature areas: gulches (defined by steep sloped ravines and drainageways formed by existing and former streams) and kula lands (defined by traditional Hawaiian terminology for open fields across vast areas with gradual slopes).

#### **Historical Background**

The ahupua'a of Honokōwai, which translates to "bay drawing water," is relatively small (roughly 4,300 acres), and bound on the north by Māhinahina Ahupua'a and on the south by Hanaka'ō'ō Ahupua'a. Ancient accounts of the area were mostly referenced in terms of its coastal geologic features, precontact records also indicate that Honokōwai was a rich agricultural area known for its kalo (taro) fields. According to the survey, Honokōwai later served as an important political region due to its proximity to Lahaina, which witnessed nearly constant warfare during times of intra-island and inter-island strife.

#### Expected Archaeological Patterns

Based on previous archaeological studies, historical research, cultural-historical context and the findings of the reconnaissance survey, the traditional patterns of settlement and agriculture are shown in the gulch areas of the Master Plan Area reflecting extensive cultivation, primarily with kalo (taro), 'uala (sweet potato), and mai'a (banana) in the mauka regions. There was also a focus on marine resource gathering along the coastline and within the off-shore waters. Several archaeological sites have been recorded by prior studies in or near the current study area, including petroglyphs and habitation sites.

While the gulches maintain traditional patterns, the kula lands witnessed major landscape alteration due to intensive commercial agriculture for sugarcane and pineapple. Therefore, all findings in these areas are anticipated to be associated primarily with Historic era and modern

land-uses. Land clearing and agricultural plowing is anticipated to have destroyed any previous archaeological features pre-dating sugarcane cultivation located outside of the gulches.

#### **Results of Fieldwork**

Fieldwork for the archaeological reconnaissance survey of the Master Plan Area was conducted on October 14-18, 2019 by ASM Affiliates. The fieldwork conducted during the identified 14 sites on the Master Plan Area. These sites were associated with both the historic and precontact time periods. Table 4-1 shows detailed information of the identified sites on the Master Plan Area.

Site #	Fieldwork Site Type	<b>Fieldwork Site Function</b>	Period
1207	Petroglyphs	Ceremonial	Precontact
T-1	Ditch	Water Infrastructure	Historic
T-2	Enclosure	Habitation	Precontact/Historic
T-3	Ditch/Culvert	Water Infrastructure	Historic
T-4	Concrete Ditch	Water Infrastructure	Historic
T-5	Flume	Water Infrastructure	Historic
T-6	Retaining wall	Unknown	Precontact
T-7	Modified outcrop	Unknown	Precontact/Historic
T-8	Wall	Unknown	Precontact/Historic
Т-9	Petroglyphs	Ceremonial	Precontact
T-10	Petroglyphs	Ceremonial	Precontact
T-11	Road	Transportation	Historic
T-12	Wall	Ranching	Historic
T-13	Ditch	Water Infrastructure	Historic

Table 4-1: Potentially Historically Significant Properties Identified by Archaeological Report

Methodology included visual inspection of the ground surface and, due to the size of the Master Plan Area, the existing landscape was used to segment the Master Plan Area into smaller, more manageable survey areas. A more targeted reconnaissance survey was also conducted at several locations where plantation features, previously identified archaeological sites, or other historic properties were anticipated.

Fieldwork on the kula lands primarily identified properties associated with historical use of the land for sugarcane cultivation. These sites included water infrastructure, roadways and agricultural barriers. The assessment notes that any traditional landscape formerly existing on the kula lands are no longer identifiable due to decades of commercial agriculture on the Master Plan Area.

Precontact sites identified on the Master Plan Area were generally associated with areas comprising the three major gulches: Honokōwai, Onepeha, and Kanauau. The assessment included fieldwork analysis with distinct survey areas for each of the gulches.

One Precontact site was identified within the Onepeha Gulch along the northern edge of the gulch containing remnants of a rectangular enclosure. Th site measures approximately 13.5 meters long by 11.5 meters wide. While three of the exterior walls remain mostly intact, the east-facing wall has previously been disturbed and bulldozed. The remaining walls consist of medium to large subangular basalt cobbles. Observations of the Master Plan Area shows prior land disturbances evidenced by

#### DHHL HONOKŌWAI MASTER PLAN

#### Final Environmental Assessment- Finding of No Significant Impact

large boulders and soil around the eastern portions of the Master Plan Area and within the immediate vicinity of the Master Plan Area likely due to previous bulldozing for commercial agriculture.

Within the Kanunau Gulch, one significant site from the Precontact period (Site #1207) was identified.

The Master Plan Area comprises a complex of petroglyphs known as "Honokōwai Petroglyphs," which were previously recorded in 1973 and subsequently registered in the State Inventory of Historic Places. Site 1207 contains a series of boulders covered with approximately 45 petroglyphs across an area of 100 square meters.

The Honokōwai Gulch previously contained a perennial stream and therefore the area was known as the primary location for agricultural cultivation and habitation within the Honokōwai Ahupua'a during the Precontact and early Historic periods. As a result, fieldwork within the gulch identified the majority of Precontact sites during the archaeological reconnaissance survey. The five sites within the gulch were identified in the report as Sites T-6 through T-10. Some of the sites identified within the Honokōwai Gulch are maintained by the land trust organization, Maui Cultural Lands, Inc. (MCL).

Site T-6, Site T-7 and Site T-8 contain modified bedrock outcrops and linear walls comprised of small to large subangular dry-stacked basalt cobbles. No cultural material was observed at any of three sites. The current state of the walls range from fair to good condition, but portions of the walls contain large collapsed sections likely due to the sloped locations.

Sites T-9 and T-10 consist of petroglyphs situated on vertical bedrock outcrop along steep sloped areas of Honokōwai Gulch. Both sites contain anthropomorphic figures and images pecked into the outcrop.

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impacts to historic properties are anticipated, largely because development activities will be limited to kula lands rather than the gulches. To mitigate any potential impacts, DHHL will comply with the recommendations of the archaeological report and any guidance provided by SHPD through the historic review process (HRS 6E-8).

Further review of the Master Plan Area with additional fieldwork, including an archaeological inventory survey (AIS) pursuant to Hawai'i Administrative Rules (HAR) 13§13-275, was recommended. The results of the AIS will likely identify additional areas not accessible during the archaeological reconnaissance survey due to terrain and heavy vegetation. Mitigation measures will be extended to future sites identified.

The reconnaissance survey of the kula lands noted that multiple decades of commercial agriculture on the Master Plan Area had an adverse impact on the traditional landscape. However, multiple sites within the Honokōwai, Onepeha, and Kanauau gulches were identified as significant. All archaeological features pre-dating the 1860s are anticipated to be isolated within the gulches.

As a result, proposed mitigation measures include the following recommendations and actions:

- A preservation plan will be implemented following HRS 6E-8 review;
- DHHL will comply with all laws and rules regarding preservation of archaeological and historic sites;

- The State Historic Preservation Division will be consulted for all mitigation efforts on the Master Plan Area;
- In the unlikely event that subsurface historic resources, including human skeletal remains, structural remains, cultural deposits, artifacts, sand deposits, or sink holes are identified during construction and development of the Master Plan Area, work will cease in the immediate vicinity of the find, the find will be protected from additional disturbance, and the State Historic Preservation Division will be contacted;
- Relevant construction documents will include a provision detailing the aforementioned criteria for all project-related development of the Master Plan Area;
- Consultation with Maui Cultural Lands, Inc. (MCL) will be conducted for all sites currently maintained by the land trust; and
- Continued consultation with stakeholders related to historic practices will be conducted, as plans for the Master Plan Area evolve.

#### 4.2 CULTURAL RESOURCES

'Āina Archaeology prepared a Cultural Impact Assessment (CIA) to identify cultural resources and history with the Master Plan Area, identify potential impacts, and recommend mitigation measures. In addition to historical sources and research, the CIA was informed by consultation by stakeholders who provided their mana'o and 'ike (thoughts and knowledge) about the lands and waters of the Honokōwai ahupua'a. Appendix D includes the CIA.

The division of Maui's lands into political districts occurred during the rule of Kaka'alaneo, under the direction of his kahuna, Kalaiha'ōhi'a. This division resulted in the creation of twelve districts or moku during traditional times, including the moku of Kā'anapali where the Master Plan Area is located.

The Master Plan Area resides in the ahupua'a of Honokōwai, in the moku of Kā'anapali which comprises eleven ahupua'a, which, from north to south, include: Honokōhau, Honolua, Honokahua, Nāpili, Honokeane, 'Alaeloa, Mailepai, Kahana, Māhinahina, Honokōwai and Makaiwa.

Honokōwai was once home to hundreds of 'ohana (families) that lived in the ahupua'a under the stewardship of Ke'eaumoku Pāpaiahiahi. After his passing, Honokōwai was transferred to Ke'eaumoku "George Cox" and then John Adams Kaluaikonahale Kuakini. At the onset of the Great Māhele, Honokōwai was set aside as Crown Lands that were then divided into some 70 Royal Patent Grants.

#### 4.2.1 Research

#### 4.2.1.1 Honokōwai Ahupua'a and Mo'olelo

The moʻolelo (traditional stories) of Honokōwai revolve around the elemental characteristics of the 'āina. Moʻolelo preserve stories about the period in Hawai'i before kānaka (humans), when gods and deities inhabited the islands, often bringing about the creation of lands and resources. There are no moʻolelo that speak specifically about Honokōwai, but there are moʻolelo about the

larger moku of Kā'anapali, which is the site of a famous battle between Chief Alapa'inui of Hawai'i Island and his cousin Kamehamehanui, against challenger Kauhiaimokuakama of O'ahu. Human remains from that battle can be found to this day, some even half-buried in the sand. The result of the battle was a draw, with the two kings – Alapainui and Peleiholani – making peace and renewing the treaty of Nāoneala'a on O'ahu.

Other important mo'olelo relate to Keka'a, which was the capital of Maui at the time Ka'alaneo ruled West Maui. The bustling village included cultivation of potatoes, bananas, sugarcane, and was home to Pu'u Keka'a, otherwise known as "the leaping place of the souls," or "Hill of the Rumbling". It is now commonly referred to as Black Rock at Kā'anapali Beach. Atop this pu'u, spiritual forces converge and form a leina a ke akua, a place from which the spirits leapt into the sea of eternity. If judged to be worthy, a soul's aumakua would be waiting in a "ghostly canoe" to take them to Po, the unknown netherworld. But if judged poorly, the spirit would go to ao kuewa where they would wander between dead and living for eternity. Others also believe that Pu'u Keka'a is the site of the Ho'akua, the Transmutation Ritual performed after the death of a chief. It was on this hill that the High Chief Kahekilinui'ahu-manu proved his bravery to the ancestors by diving off the rock into the ocean and surviving.

Later, Keka'a was the site of a thriving plantation camp, and Pu'u Keka'a was the burial site for hundreds of the plantation workers.

#### 4.2.1.2 Traditional Settlement and Aquaculture of Honokōwai

Kalo (taro) and 'uala (potatoes) were important crops of the area. The lands were also used to cultivate mai'a (banana), lauhala (pandanus leaves), wauke (mulberry), and olonā (a native shrub Touchardia latifolia, the bark from which was valued as fiber for cordage and nets).

Kāʻanapali was also an entry point to important fishing grounds, with one extending from Hāwea Point at Kāʻanapali all the way to the eastern point of Lānaʻi.

#### 4.2.1.3 Nineteenth Century Changes, Māhele, and Kuleana Lands

The nineteenth century brought commercial, demographic, social, and religious changes to the region. Closely following the arrival of the first whaling ships to Hawai'i in 1819, the first Protestant missionaries and their families arrived in Lahaina in 1823. With an increasing population of foreigners entering nearby Lahaina, there was a need to increase the traditional agricultural surplus that fell primarily under the control of the ali'i (chief) class, for economic trade. Western vegetables became a common and abundant constituent of the Hawaiian gardens.

After the consolidation of the rulership of the Hawaiian Islands by Kamehameha I early in the nineteenth century, Lahaina became the "capital" of the kingdom until the 1840s when the government moved to Honolulu.

In The Great Māhele of 1848 under King Kamehameha III, lands were divided into three classifications. Lands given to ali'i and konohiki (landlords) were referred to as Konohiki Lands.

Lands retained by the King were referred to as Crown Lands. The third classification of lands was Government lands. In 1850, most chiefs ceded a third of their lands to Kamehameha III to obtain an allodial title for the remainder. The majority of these lands became Government lands, defined and set aside in a manner similar to public lands, and paved the way for land sales to foreigners when the legislature granted resident aliens the right to acquire fee simple land rights.

In designations of lands as either Crown or Government, and all awards of whole ahupua'a, 'ili (usually a subdivision of an ahupua'a), and later land sales to foreigners, the rights of the native tenants were expressly reserved. Tenants could make claims for any lands that they cultivated, through testimony to the Land Commission. Claims could be granted to native Hawaiians, non-Hawaiians born on the island, naturalized foreigners, and longtime resident foreigners who could prove their occupancy on the land prior to 1845. However, in a Congressional hearing from 1920 leading to the formation of DHHL, Prince Jonah Kūhiō testified that these occupants were told they only had two years to make a claim. The intent of the Māhele was for the land to be divided equally among the government, the chiefs, and native tenants. However, as a result of the Māhele, native tenants ultimately received less than one percent of all the land in Hawai'i, a total of 28,658 acres, while 32 missionary families received 41,000 acres. Refer to Appendix D.

At the onset of the Māhele in 1848, Honokōwai was retained as Crown Lands by Kamehameha III. To ease the process of land titling, both native Hawaiians and other residents could purchase land outright from either Crown Lands or Government Lands through Palapala Sila Nui (Royal Patent Grants), in addition to kuleana claims through LCAs. In Honokōwai, all but one of the LCAs awarded also received a Royal Patent Grant. Between 1849 and 1897, there were 70 petitions for land claims in Honokōwai, and 59 were successfully awarded Land Commission Awards (LCA). Refer to Appendix D.

#### 4.2.1.4 Plantation and Military History

The unifying of the Hawaiian Islands in 1790 and the arrival of missionaries in the 1820s changed the socioeconomics and agricultural practices of the region. The traditional Hawaiian ahupua'a system struggled against foreign entrepreneurs pushing for private land ownership and a market-based economy. The Great Māhele of 1848 solidified the latter, allowing capitalism to take root and foreign businesses to dominate the landscape. For nearly a century following 1840, sugar milling in West Maui grew from a small cane field cultivated by David Malo, to a massive 10,000 acre operation operated by the Pioneer Mill Company.

The sugar industry ramped up in the 1900s, acquiring additional water sources and solidifying water agreements with the Honolua Ranch (later known as the Baldwin Packers, then Maui Pineapple Company, then in 1969 the Maui Land and Pine or M L & P) who built and owned the Honokōhau Ditch.

Water diversion began in West Maui as early as 1876. The practice began deceptively, resembling agricultural practices similar to growing taro. But unlike taro production, the water used was not returned to the stream but instead permanently transported out of the
watershed. Traditional agriculture failed with the loss of water to sugar plantations, and with few legal resources against these giant industries, little could be done by the native population. Deforestation of native forests also contributed to these devastating environmental effects, leading public policy to shift toward conservation-focused development in the late 1900s. By 1930, the Pioneer Mill was the largest sugar producer in West Maui, and second in all of Maui Nui.

In 1947, loss of labor to soldiers in World War II, additional labor strikes, and the internment of Japanese Americans in Haiku all took a toll on sugar operations. Railroad operations were abandoned in August of 1952. In the 1980s, the plantation began to restructure the property for tourism, but even with these measures, the Pioneer Mill lost \$7 million dollars between 1994 to 1999. Pioneer Mill finally closed its doors at the turn of the 21<sup>st</sup> century.

Waine'e Village, the last of the West Maui plantation camps, closed in 1993. Efforts were made to begin converting Lahaina into a tourist destination following the fall of the agriculture industry. The transition also opened new employment opportunities for women. The plantation era was commemorated in West Maui through the Pioneer Mill smokestack, and city-wide celebrations such as the "Lahaina Plantation Days", replacing the indigenous history with memorials to 19<sup>th</sup> century agricultural history.

# 4.2.1.5 1950-Present – Mid-20th Century to the Modern Era

Resort construction on the Kā'anapali coast began in 1959. The Royal Lahaina resort complex was the first to open in December of 1962, closely followed by the Sheraton Maui Hotel. The same year, Amfac, Inc. also opened the Kā'anapali Airstrip. That airstrip closed in 1982 with news that Hawaiian Airlines would soon create its own airport in West Maui. In 1987, the Kapalua Airport opened.

By the late 1970s, historic landmarks like the Pioneer Mill smokestack and the defunct railroad were converted to tourist destinations. Hotel construction, especially on the coast, required the removal of hundreds of burials, specifically surrounding Pu'u Keka'a.

In 2001, the Hawaiian organization *Na Kupuna O Maui* staged a peaceful demonstration walking the path connecting two sacred West Maui sites: the Pu'u Keka'a and Moku'ula in Lahaina. The demonstration ended with leaps from the Pu'u, spanning the space between the physical and spiritual realms.

# 4.2.1.6 Maui Land and Pineapple

The beginning of the pineapple industry on Maui started in 1890 when D.D. Baldwin began experimental pineapple plantings in Haiku, eventually incorporating the Haiku Fruit & Packing Co., Ltd. in 1903. By 1914, the Baldwins added a pineapple growing operation to Honolua Ranch, which they owned, irrigated by Honokōhau Ditch. By 1969, the Baldwins and Alexander

& Baldwin Inc., merged their West Maui and East Maui ventures forming the Maui Land & Pineapple Company, Inc.

The 1990s marked a significant change in M L & P's entrepreneurial focus. Instead of focusing on their pineapple subsidiary, the company continued to shift towards resort development. In 2002, when DHHL had acquired additional funds to expand homelands through Federal action, M L & P began leasing their 510 acres of agricultural land (TMK parcels 4-4-002:015 and 18) in Honokōwai. The lease was to expire come 2011, but with their focus shifting towards resort development and with the pineapple industry in West Maui slowly failing, they severed the lease of these lands in 2009. M L & P continued to retain their ownership of the Honokōwai Reservoir, built in 1918 and modified in 1999, in the center of the Master Plan Area.

# 4.2.2 Stakeholder Interviews

In addition to historical sources and research, the CIA was informed by consultation by stakeholders who provided mana'o (thoughts) about the lands and waters of the Honokōwai ahupua'a. Refer to Appendix D for the interview summaries.

The area of potential direct effect was considered to be the Master Plan Area. Stakeholders raised concerns regarding direct impacts to water supplies, ensuring water security, a good quality of life (including controlling odors from County wastewater treatment facilities), and preventing potential infringements upon future LCA claims. Figure 16 shows the approximate boundaries of LCA claims in the context of the Master Plan Area.

For the purposes of the CIA, the region of influence and study was the geographic area encompassed by the known traditional boundaries of the ahupua'a of Honokōwai. Stakeholders raised concerns regarding indirect effects involving coastal marine resources, which support the most prominent and significant practice within the ahupua'a—fishing, diving, and gathering.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

An overall positive impact is anticipated with respect to cultural resources. No significant adverse impacts are anticipated.

As noted above, stakeholder interviews raised concerns regarding direct impacts to water supplies, ensuring water security, a good quality of life (including controlling odors from County wastewater treatment facilities), and preventing potential infringements upon future LCA claims. Potential indirect effects related to coastal marine resources, which support the most prominent and significant practice within the ahupua'a—fishing, diving, and gathering.<sup>7</sup>

<sup>&</sup>lt;sup>7</sup> One stakeholder interview indicated that the interviewee's ancestors are buried in Honokōwai Valley. DHHL acknowledges this information, however Honokōwai Gulch is not part of the Master Plan Area and therefore the Proposed Action is not anticipated to have impacts regarding this comment. Further research into LCA claims within the Master Plan Area continues, however.

# Figure 16. Master Plan Area with Approximate Boundaries of Land Commission Awards

Impacts to water resources, including marine resources, are addressed in Section 3.4. Infrastructure for the delivery of potable and non-potable water and projected demand are addressed in Section 0. As noted in Section 4.8.2, proposed uses have been sited within the Master Plan Area to avoid placing sensitive uses near the LWWRF, to avoid noise and/or impact odors that may result from the County's LWWRF operations.

Refer to Appendix D for the interview summaries.

Like many DHHL lands across the state, the Master Plan Area has rich agricultural history, and it is anticipated that through proper stewardship and management, the Master Plan Area can be restored to its former productivity, and a resource for native Hawaiians.

The CIA provided recommendations that would allow the Proposed Action to address the above concerns, and furthermore would enable DHHL's lands at Honokōwai to serve as a model for future DHHL communities. The following cultural mitigations are proposed, with the goals of 1) addressing the concerns noted above, and 2) ensuring the Proposed Action would have an overall positive cultural impact. These recommendations are summarized below and DHHL will employ these strategies to the extent practicable.

- Stakeholder interviews revealed a desire for residents to grow traditional and/or native plants that could serve aesthetic, traditional, and educational purposes. Crops grown in the mauka regions of the development could be traded or shared with residents in the makai portion; thereby, allowing residents to engage in the traditional practice of kuapo (trade).
- A community facility to process agricultural products should also be considered, to facilitate intra-community trade as noted above.
- Provide agricultural and Hawaiian culture resources for site users. For instance, proposed uses are compatible with the construction of a hale wa'a (canoe house) that could be used to teach and learn about voyaging culture.
- Any portion of the Master Plan Area with an unresolved existing or potential Land Commission Award (LCA) claim will not be developed until the status and/or validity of that claim can be legally resolved. DHHL will avoid use of any such areas and respect its boundaries until a complete title search and further research as to a potential claim's validity can be conducted.

In addition to the above recommendations which are specific to the Proposed Action, DHHL will employ the following general cultural mitigations to ensure a positive impact and thriving cultural community.

- Encourage use of traditional place names when possible in Master Plan Area design, signage, and related materials.
- Minimize coastal resource degradation that may result from flooding.
- Increase awareness of the connectivity between the mauka and makai resources of Honokōwai ahupua'a.

# Final Environmental Assessment- Finding of No Significant Impact

- As a part of farm planning, the use of appropriate native ground cover in noncultivated areas should be considered to minimize dust pollution that may result from modern agricultural practices and carried by the winds.
- Foster and encourage a mālama 'āina land stewardship ethic that extends beyond the physical boundaries of DHHL's lands. Strategies to accomplish this could include BMP monitoring/enforcement, continued agency consultation, and environmental outreach/education programs where possible. Any prospective third-party developers or tenants of commercial/industrial areas who embrace this land ethic should be favorably considered from a cultural standpoint.
- Prior to the initiation of land development, whether residential, business, or agriculture, appropriate blessings and/or protocols should be carried out.
- Embrace the re-introduction and cultivation of suitable native and canoe plants, in support of traditional practices and/or crafts.
- Preserve traditional mauka/makai access through a connective community design. Traditional trails are not known the Master Plan area; this mitigation embraces a revival of trail system access across the property.

# 4.3 SOUND

The Master Plan Area is surrounded by agricultural and vacant land, as well as Honoapi'ilani Highway to the west. Because the mauka areas of the Master Plan Area are relatively far from Honoapi'ilani Highway, it is not currently impacted by vehicular traffic noise. Background noises are primarily attributed to natural sources (e.g., wind) and continuing agricultural operations. Another potential source of noise is West Maui Kapalua Airport, located north of the Master Plan Area, although airport activities are limited to daytime hours. See Section 4.10.4.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

# Mitigable impact.

Noise impacts from ongoing operations at the Master Plan Area are not anticipated. By existing DOH regulations, fixed noise machinery on commercial and industrial buildings within the Master Plan Area may emit sound levels continuously during the day and night, as long as their sound levels do not exceed 70 dBA at or beyond the lots' Master Plan Area boundaries. To mitigate against any potential long-term operational noise impacts, measures to limit the noise from fixed mechanical equipment to those allowed by the DOH will be required of all tenants within industrial and commercial areas, as needed. Risks of adverse noise impacts from onsite noise sources are considered to be minimal. The Master Plan includes a 50 foot setback along Honoapi'ilani Highway. Community Use: Commercial users will be responsible for maintaining the setback.

The Proposed Action will comply with all applicable rules and provisions including those of Chapter 11-46, HAR, "Community Noise Control".

Construction noise will likely be audible during the entire construction period. If noise created during the construction phase of the Proposed Action is expected to exceed the maximum allowable levels, then a noise permit will be obtained before the commencement of work. The use of properly muffled construction equipment will be required on all job sites. The incorporation of DOH construction noise limits and curfew times, which are applicable throughout the state, is another noise mitigation measure. Loud construction activities are not allowed on Sundays and holidays, during the early morning, and during the late evening and nighttime periods under the DOH permit procedures. The closest existing residences are approximately 200 feet away, however they are separated from the Master Plan Area by Honoapi'ilani Highway (a source of ambient noise) and a change in elevation (approximately 30 feet, according to topographic maps). Therefore, risks of adverse noise impacts at existing residences during construction activity are expected to be relatively low. The use of temporary sound barriers (wooden walls, bumper-to-bumper buses with closure panels, etc.) or even portable air conditioning equipment could provide additional sound attenuation during site preparation activities.

The State Department of Transportation (HDOT) is proposing Phase 1-D of the Lahaina Bypass highway from Launiupoko to Honokōwai. The new phase is planned to rejoin Honoapi'ilani Highway somewhere in the vicinity of the Master Plan Area. HDOT has confirmed that it is no longer pursuing a route that traverses across DHHL Honokōwai land. However, at this time, HDOT is still in the process of identifying a preferred route for Phase 1-D. Once constructed, the Lahaina Bypass could have noise impacts on the proposed Honokōwai residential and other land uses. Sensitive uses will not be placed directly adjacent to this area. As noted above, the Master Plan includes a 50 foot setback along Honoapi'ilani Highway.

### 4.4 AIR QUALITY

Air quality on Maui, as throughout the state, is considered to be good due to the presence of northeasterly trade winds that tend to disperse pollutants seaward. On the Leeward side (Southeast side) of Maui, the conditions are generally dry and sunny. Air quality in the area is impacted primarily by air pollutants from vehicular, natural and/or agricultural sources. Because some active cultivation is still ongoing, the Master Plan Area is subject to dust and equipment emissions associated with agricultural activities/ Cessation of Pioneer Mill sugar cultivation in the 1990's may have decreased particulate matter in the area.

The Clean Air Act requires the U.S. Environmental Protection Agency (EPA) to set National Ambient Air Quality Standards (NAAQS) for six common air pollutants. These commonly found air pollutants (also known as "criteria pollutants") are found throughout the United States. They are particle pollution (often referred to as particulate matter), ground-level ozone, carbon monoxide, sulfur oxides, nitrogen oxides, and lead. These pollutants can harm public health and the environment, as well as cause property damage. Another set of limits intended to prevent environmental and property damage is called secondary standards. The EPA designates areas as meeting (attainment) or not meeting (nonattainment) the aforementioned "standards." The Clean Air Act requires states to develop a general plan to attain and maintain the NAAQS in all

areas of the country and a specific plan to attain the standards for each area designated nonattainment for a NAAQS. Hawai'i has no areas designated as a "nonattainment" area.

### POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impacts are anticipated. Construction activity will be the main source of shortterm, mitigable air quality impacts. Construction vehicle activity will temporarily increase automotive emissions along existing roadways as well as on the Master Plan Area. Site preparation, earth moving, and building construction will create temporary particulate emissions. Site preparation (e.g., grading) activities could result in fugitive dust emissions. Nitrogen oxide emissions would primarily result from the use of construction equipment (vehicle exhaust). Construction emissions may vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions. A large portion of the emissions would result from equipment traffic over temporary roads at construction sites. To mitigate construction emissions particularly fugitive dust, the following Best Management Practices (BMPs) will be implemented by contractors throughout any construction phases:

- DHHL will require its contractors to meet the requirements of the Department of Health Air Pollution Rules, Chapter 11-60.1 for fugitive dust control.
- The construction contractor should use water or suitable chemicals to control fugitive dust in the demolition of any existing buildings or structures, construction operations, the grading of roads, or the clearing of land.
- The construction contractor should apply asphalt, water, or suitable chemicals on roads, material stockpiles, and other surfaces which may result in fugitive dust.
- The construction contractor should cover all moving, open-bodied trucks transporting materials which may result in fugitive dust.
- The construction contractor should maintain roadways in a clean manner.
- The construction contractor should promptly remove earth or other materials from paved streets which have been transported there by trucking, earth-moving equipment, erosion, or other means.
- Staging areas should be located away from onsite residential land uses.
- Onsite electricity should be obtained from the electrical grid rather than temporary diesel or gasoline generators, whenever possible.
- Equipment and vehicle engines should be maintained in good condition and in proper tune per manufacturers' specifications.
- All construction equipment and delivery vehicles should be turned off when not in use or prohibit idling in excess of five minutes. Haul trucks in particular that stage waiting to be called to remove dirt from construction sites should not be allowed to idle while queuing.
- Land uses sensitive to air pollution (e.g., residences, care facilities, and educational facilities) should not be located within 1,000 feet of a distribution center that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units (TRUs) per day, or where TRU unit operations exceed 300 hours per week).

- Planning the different phases of construction should focus on minimizing the dustgenerating materials and activities as well as centralizing onsite vehicular traffic routes;
- Adequate water source should be provided at construction sites prior to start-up of construction activities;
- Landscaping and rapid covering of bare areas, including slopes should be conducted starting from the initial grading phase; and
- Adequate dust control measures should be provided during weekends, after hours, and prior to daily start-up of construction activities

# **Operational-Related Regional Emissions**

The Proposed Action includes the development of onsite sensitive receptors such as residences and educational facilities. The nearest off-site sensitive receptors are residential areas located 0.2 miles to the west. The Master Plan Area is located in an Attainment/Unclassified area for all National Ambient Air Quality Service (NAAQS) and regional air quality is good. The Proposed Action is not anticipated to substantially affect regional air quality.

# **Operational-Related Localized Emissions**

It is not anticipated that onsite emissions will affect local land uses. The Proposed Action does not include a source of direct pollutant emissions. Indirect sources of emissions include off-site electrical generation activities (if the energy source is non-renewable) and emissions from on-road vehicles. Although the Proposed Action includes development within the Master Plan Area, the anticipated land uses include roughly 150 acres of conservation space, 30 acres of park space, and majority agricultural uses across much of the Master Plan Area. DHHL will consider ways to incorporate state-of-the-art energy conservation and green practices in the development of the Master Plan Area. Development will not interfere with the development of clean energy supplies.

# 4.5 VISUAL RESOURCES

The Master Plan Area is primarily surrounded by agricultural and vacant or fallow land uses, and is bordered to the west by Honoapi'ilani Highway. The County's Maui Island Plan includes a Character & Context Map which identifies Scenic Corridors throughout Maui. Scenic Corridors are categorized as either Exceptional, High, or Medium. The section of Honoapi'ilani Highway fronting the Master Plan Area is categorized as Medium<sup>8</sup>.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

No significant impact to visual resources is anticipated. DHHL respects scenic resources identified in the County's Maui Island Plan, and will be generally consistent with its policies regarding Honoapi'ilani Highway, which is categorized as a "medium" level scenic corridor in the vicinity of the Master Plan Area. For example, appropriate building setbacks will be utilized, and wall heights

<sup>&</sup>lt;sup>8</sup> Corridors with medium or low scenic resource values are generally in areas where the scenery is less dramatic and urban encroachment is more significant.

are anticipated to be limited along the highway. Development of the Master Plan Area will change the visual character of the property from vacant lands to that of a rural community, primarily agricultural, with a mixture of land uses.

The Proposed Action proposes a 50 foot buffer between Honoapi'ilani Highway and any structures, and the plan includes roughly 150 acres of conservation space, 30 acres of park space, and majority agricultural uses. Furthermore, much of the southern portion of the Master Plan Area, at the intersection with Lower Honoapi'ilani Road, is separated from Honoapi'ilani Highway by the existing County (offsite) wastewater treatment facility which is screened with landscaping.

### 4.6 Man-Made Hazards

DHHL acknowledges the Master Plan Area's former use as a pineapple plantation, and will follow any applicable guidance from the Department of Health Hazard Evaluation and Emergency Response Office.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

DHHL will undertake the necessary mitigation measures to ensure no significant adverse impact occurs. Former agricultural uses will be taken into consideration as plans for the Master Plan Area progress.

During the pre-assessment consultation period, the State of Hawai'i Department of Health Hazard Evaluation and Emergency Response (HEER) Office commented:

Residual pesticides in former agricultural lands could pose potential risks to human health and the environment in a residential setting. HEER Office guidance recommends that sites with known pesticide-related contamination and also those where pesticides were regularly applied be evaluated for residual contamination prior to re-development... A Sampling and Analysis Work Plan should be submitted to the HEER Office for review and approval prior to conducting such an evaluation. Where soil contamination concentrations exceed [DOH] Tier 1 Environmental Action Levels (EALs), land use restrictions or remedial action may be required.

To ensure the health and safety of future Master Plan Area users, DHHL will adhere to the following mitigation measures.

- Retain an environmental consultant to submit a Sampling and Analysis Work Plan to the HEER Office, evaluating residual pesticide risk in any areas of the Master Plan Area intended for areas intended for re-development
- If contamination is confirmed or likely, DHHL will issue a notice to site users and, as needed, DHHL will address contamination concerns in cooperation with the HEER Office including through possible land use restrictions or remedial action.

### 4.7 ROADWAYS AND PUBLIC TRANSIT

Traffic consultant Fehr & Peers prepared a Transportation Impact Analysis Report (TIAR) in June 2021 (updated in January 2022) to analyze potential traffic impacts associated with the Master Plan Area. The TIAR includes an analysis for three scenarios: Existing (2020) Conditions, Future (2028) Baseline Conditions (without the Master Plan), and Future (2028) Plus Master Plan Conditions.

### 4.7.1 Existing Roadways

Regional access to the Master Plan Area is provided by Honoapi'ilani Highway (Highway 30). The following describes these key roadways in the vicinity:

*Honoapi'ilani Highway* (Highway 30) provides regional access around the western side of Maui, providing connection between West and Central Maui. In the vicinity of Lahaina in West Maui the roadway is classified as a minor arterial and transitions into a principal arterial as it extends south to Mā'alaea and then toward central Maui in Waikapu and downtown Wailuku. Through the west Maui regions of Kapalua and Honolua, north of the Master Plan Area, it is classified as a major collector roadway, ending in Honokōhau Bay, where it becomes Kahekili Highway. In the Master Plan Area, this undivided arterial extends in a north-south alignment between Kā'anapali Parkway-Hālelo Street and Lower Honoapi'ilani Road and provides two travel lanes (one in each direction) with separate lanes for left turns at intersections. North of Lower Honoapi'ilani Road, it changes to two-way, two-lane undivided roadway. Parking is not permitted on most segments of Honoapi'ilani Highway, and sidewalks are not provided. The posted speed limit ranges between 30 to 45 miles per hour (mph). In the vicinity of the Master Plan Area, the speed limit is 40 mph.

*Lower Honoapi'ilani Road* is a two-lane urban major collector makai of the Master Plan Area. It provides access to residential areas, hotels, and businesses. Within the vicinity of the Master Plan Area, Lower Honoapi'ilani Road is an undivided roadway that runs parallel to and makai of Honoapi'ilani Highway. Lower Honoapi'ilani Road extends from an intersection with Honoapi'ilani Highway on the south end of the roadway to the north, where it then intersects with Office Road. In the vicinity of the Master Plan Area, its posted speed limit is 20 mph.

**Akahele Street** is a two-way, two-lane (one lane in each direction) roadway that begins from Lower Honoapi'ilani Road and terminates at the Kapalua Airport. Posted speed limit is 30 mph and on-street parking is not permitted. A pedestrian pathway is provided on the south side of Akahele Street that provides connection between the airport and Honoapi'ilani Highway.

**Hālāwai Drive-Kai Malina Parkway** is a two-way roadway that provides access to hotels and businesses. The portion of the roadway on west of Honoapi'ilani Highway, Kai Malina Parkway, serves Honua Kai Resort and the Westin hotel. Hālawai Drive is on east side of Honoapi'ilani Highway. On-street parking is permitted on Hālāwai Drive and most segments of Kai Malina Parkway.

*Kā'anapali Parkway-Hālelo Street* is a north south roadway that extends from Honoapi'ilani Highway to the south to Sheraton Maui Resort and Spa to the north. It is located on makai side of Honoapi'ilani Highway and provides access to various hotels and businesses. Kā'anapali Parkway-Hālelo Street is a two-way, two lane divided roadway.

Six study intersections were evaluated during weekday morning (6:00 to 9:00 AM) and evening (3:00 to 6:00 PM) peak period conditions. They are as follows.

- Honoapi'ilani Highway and Akahele Street
- Honoapi'ilani Highway and Lower Honoapi'ilani Road
- Honoapi'ilani Highway and Kai Malina Parkway-Hālāwai Drive
- Honoapi'ilani Highway and Kaka'alaneo Drive
- Honoapi'ilani Highway and Pu'ukoli'i Road
- Honoapi'ilani Highway and Kā'anapali Parkway-Hālelo Street

Traffic counts were collected at the study intersections on March 10, 2020 when local schools were in session and prior to COVID-19 related travel restrictions. The weekday AM peak hour of traffic for the study area generally occurs between the hours of 7:15 AM and 8:15 AM. During the weekday afternoon/ evening, the PM peak hour of traffic generally occurs between the hours of 4:00 PM and 5:00 PM. Raw traffic count data sheets are provided in Appendix E.

A field visit was not conducted due COVID-19 related restrictions. Existing lane configurations were determined from satellite imagery and signal timing sheets were obtained from HDOT. Refer to Appendix E for more detail regarding existing condition AM and PM peak hour turning movement volumes, corresponding lane configurations, and traffic control devices.

Existing peak hour volumes and lane configurations were used to calculate the level of service (LOS) for each of the study intersections. It was concluded that all of the existing study intersections operate at a desirable level of service (LOS D or better) during the weekday AM and PM peak hours. However, some individual turning movements/approaches operate below LOS D, even when the overall intersection is operating at a desirable LOS. Movements operating at LOS E or F during peak periods is not uncommon, especially on high volume, urban roadways and are typically only considered notable problems when they negatively impede other turning movement flows. Most of the operating movements with longer delays are left-turn movements. This is attributed to the existing signal timing allocating more green time to the through movements, which in most cases, will cause the left-turn movements to operate at LOS E or F in at least one of the peak hours.

# 4.7.2 Future Lahaina Bypass

During the Draft EA consultation period, HDOT commented:

The master plan reserves land for the HDOT-HWY Lahaina Bypass (Phase 1-D), Launiupoko to Honokōwai *(sic)*. As discussed in a meeting with DHHL and their traffic consultant (December 11, 2020), Phase 1-D is not designed or funded, and

may be delayed to 2030. The current preliminary design would have the Lahaina Bypass terminate at the Kakaalaneo *(sic)* Drive intersection with Honoapiilani *(sic)* Highway. This alignment would be south of the Honokowai *(sic)* site.

In response to this comment, in consultation with its beneficiaries, DHHL has reallocated lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. Figure 5 shows the revised master plan, which reflects this change. To preserve north-south connectivity across the Master Plan Area in the absence of the Bypass, DHHL is contemplating an additional fourth highway access, which would connect with the Hālāwai Drive access.

# 4.7.3 **Public Transit & Multimodal Facilities**

The Maui Bus service provides public transit service around the island with 13 bus routes. Each route operates seven days a week, including holidays. Routes 25 and 28 provide service to a bus stop located within two miles of the Master Plan Area. The Kā'anapali Islander (#25) connects Kapalua to downtown Lahaina. The West Maui Islander (#28) connects Kā'anapali to downtown Lahaina. Both routes operate along Honoapi'ilani Highway and provide hourly service.

There are three types of existing bike facilities in the vicinity of the Master Plan Area, including bike lanes, bike routes (or shared roadways), and separated bikeways. Honoapi'ilani Highway and Lower Honoapi'ilani Road act as bicycle routes with short segments of dedicated bike lanes provided on the makai side of the highway near Akahele Street and the mauka side near Kaka'alaneo Drive to facilitate bicycle travel through the intersections. No other separate bicycle facilities such as lanes or paths are provided along the streets in the vicinity of the Master Plan Area. The Master Plan Area itself contains no existing bicycle or pedestrian facilities, due to it being largely vacant.

The nearest existing crosswalk facilities are located at Akahele Street and Lower Honoapi'ilani Highway. DHHL notes the Proposed Action is expected to generate bicycle, pedestrian, and transit trips to and from the master plan area. Land uses in Kā'anapali include local attractions and employment opportunities as well as transit service along Lower Honoapi'ilani Highway.

All roads are intended to be dedicated to the County with shoulders and swales in keeping with the agricultural-rural character of the Project, and to minimize impervious surfaces.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

# **Existing Roadways**

Mitigable impact. Adverse impact to existing roadways will be mitigated by adhering to TIAR recommended mitigations. DHHL will design and construct the collector and local roads and major onsite infrastructure. Improvements on each lot would be developed by lot awardees, or in the case of commercial or industrial areas, by the lessees.

Access to the Master Plan Area is proposed at three locations that intersect with Honoapi'ilani Highway, including two modified intersections between Akahele Street and Lower Honoapi'ilani

Road, and a connection at the existing intersection at Hālāwai Drive. To preserve north-south connectivity across the Master Plan Area, DHHL is contemplating an additional fourth highway access, which would connect with the Hālāwai Drive access. The modified intersections would replace existing paved segments that currently provide access to DHHHL's lands.

For the purposes of the TIAR, future scenario uses included community-serving land uses such as a school, community center, health care facilities, or small neighborhood retail uses. To provide flexibility in future uses and address the most intensive potential use of the Master Plan Area, the Community Use: Commercial acreage was split in half and evaluated based on the Institute of Traffic Engineer (ITE) trip generation rates for shopping center and recreational community center. Should other land uses and/or larger community uses be pursued than what is evaluated within this TIAR, a reassessment of traffic operations may be required.

During the pre-assessment consultation period, HDOT – Highways Division (DOT-HWY) commented:

1.1 The TIAR should include any phasing plan and the transportation improvements of each phase. 1.2. The development should explore interconnectivity with adjacent developments in the vicinity. 1.3. Any proposed access onto the State Honoapiilani *(sic)* Highway should be limited and be coordinated with the DOT-HWY.

During the pre-assessment consultation period, the County of Maui Department of Transportation commented:

...For public transit to be considered for expansion in new developments, there are certain criteria...such as through streets whether it's major collector roads or within the subdivisions. Providing interconnecting sidewalks within and between the subdivisions and ample lighting in the evenings is also necessary for walkable communities and for the safety of potential residents and public transit riders.

DHHL will construct the required roads within the Master Plan Area, and anticipates that they will be to County standards, where possible. The Honokōwai Master Plan will limit access points to Honoapi'ilani Highway, and are being coordinated with HDOT-HWY.

DHHL is coordinating on a potential roadway connection with the neighboring Pulelehua planned residential and commercial development, located to the north of the Master Plan Area. The contemplated locations for these internal connector roads are shown in Figure 5.

Since maintenance of County roads are primarily funded by fuel tax, which the lessees pay at the pump like other vehicle owners, the fiscal impact to the County would not be significant.

During the Draft EA consultation period, HDOT commented: *Identify improvements within the Honoapiilani* (sic) *Highway ROW required to support the project even if they would be constructed by other entities.* 

The Proposed Action is not expected to result in any significant traffic impacts to the roadway system in the vicinity of the Master Plan Area, given the recommended mitigations. The TIAR

recommended several improvements which would ensure roadway efficiency. DHHL will continue coordination with HDOT as development progresses, and will contribute its fair share to any mitigations that are required, potentially including:

Intersection 1: Honoapi'ilani Hwy & Akahele St: increase the cycle length to 180 seconds and optimize signal timings. The recommended modifications are forecast to improve the signal operation to a desirable LOS D in the PM peak hours with buildout of the Proposed Action.

Intersection 6: Honoapi'ilani Hwy & Kā'anapali Pkwy-Halelo St: modify the eastbound lane configuration to provide one dedicated left turn, a shared through/left turn, and two dedicated right turn lanes. The improvement is forecast to improve intersection operations to LOS C in the AM peak hour, and LOS E in the PM peak hour to less than significant levels.

Intersection 7: Honoapi'ilani Hwy & the North Access: Signalizing the intersection would improve traffic operations to desirable LOS conditions. The recommended lane configuration includes:

- One through and one dedicated left turn lane on the southbound approach;
- One through and one shared through/right turn lane on the northbound approach; and
- One dedicated left turn and one dedicated right turn lane on the westbound approach.

Intersection 8: Honoapi'ilani Hwy & the South Access: The TIAR notes that DHHL may effect a positive impact on traffic turning onto the highway with mitigations such as implementing a merge lane consistent with HDOT standard. DHHL will consider the feasibility of this improvement.

# **Construction Impacts**

To mitigate construction impacts to existing roadways, a Construction Management Plan will be prepared for each development phase and/or project within the Master Plan Area, prior to construction permits being issued. DHHL notes that construction impacts are temporary and usually less impactful than the project as a whole, especially since the Master Plan Area will be built out in three or more separate phases.

# Public Transit and Multimodal Facilities

DHHL recognizes the benefits of public and multimodal transit for its communities. No adverse impact to public transit or multimodal facilities is anticipated, however the Proposed Action is anticipated to add future pedestrian and bicycle demand to the Master Plan Area and a section of Honoapi'ilani Highway where bike routes and crosswalks at the main intersections are provided. As discussed above, safety and complete streets improvements are planned along Lower Honoapi'ilani Highway. DHHL will not impede the implementation of these planned improvements, and will contribute to the region's multimodal facilities where appropriate. Designated areas within onsite conservation buffers may also be used for appropriately designed pedestrian trails that can provide safe mauka and makai access. DHHL is coordinating on a

#### Final Environmental Assessment- Finding of No Significant Impact

potential roadway connection with the neighboring Pulelehua planned residential and commercial development, located to the north of the Master Plan Area.

During the Draft EA consultation period, HDOT commented:

No significant impact to public and multimodal facilities is anticipated; however, the recommendations in the TIAR should be incorporated into the Final EA and master plan. We recommend including walking and biking path interconnectivity with adjacent planned developments to provide a less stressful alternative to sharing the Honoapiilani *(sic)* Highway Right-of-Way (ROW) with its high-speed traffic.

The Proposed Action is anticipated to result in the following positive impacts to public transit and multimodal transportation:

- Additional pedestrian crossing facilities are anticipated when traffic signals are installed at the intersection of the Master Plan Area's north access with Honoapi'ilani.
- Where feasible, additional pedestrian connections to Lower Honoapi'ilani Highway from the makai side of Honoapi'ilani Highway will be considered to minimize walking distances and provide greater access to public uses including beaches, parks, and transit service along Lower Honoapi'ilani Highway.
- As transit ridership may be high in the vicinity of the Master Plan Area, existing bus operations will be evaluated intermittently to determine if adequate transit capacity is available to absorb any potential increase from the Proposed Action.
- DHHL acknowledges the value of separating vehicle lanes from pedestrians and bicycles, and this will be taken into account when designing bicycle and pedestrian facilities.
- Consistent with the Maui Vision Zero and HDOT design standards, DHHL will contribute its fair share to access signalization and/or controlled crosswalks if necessary.

During the Draft EA consultation period, HDOT commented: With respect to multimodal transportation, Honoapiilani (sic) Highway fronting the site has a signed shared bikeway, no sidewalks and no transit stops. There are transit stops along Lower Honoapiilani (sic) Drive. The TIAR recommends transportation demand strategies to reduce vehicle trips generated and provide safe bike and pedestrian routes.

As recommended in the TIAR, DHHL will consider ways to support the provision of continuous pedestrian and bicycle facilities, as well as various mitigation strategies for transportation demand management (TDM) including:

- Potential implementation of a TDM program for site users managed by a TDM coordinator who would organize and coordinate monitoring efforts, parking and traffic management plans, and the implementation of TDM, recommendations, and modifications
- Provision of a transportation kiosk and online portal for information on ridesharing, transit, bicycling, walking, and options for accessing the Master Plan Area other than using a private vehicle
- Provision of bicycle parking adjacent to Community Use and multi-family residential areas
- Improvement of bicycle and pedestrian facilities to improve access to local destinations and/or transit

• Potential implementation of micromobility devices (e.g., bicycles or scooters, e-bikes, and/or care share), as feasible

In addition to the above, DHHL will coordinate with MPD regarding traffic, to minimize potential impacts to police services. Refer to Section 4.10.2.

# 4.8 INFRASTRUCTURE AND UTILITES

Engineering consultant Otomo Engineering prepared a Preliminary Infrastructure Analysis Report in April 2021 (updated in November 2021) to analyze potential infrastructure impacts associated with the Master Plan Area.

### 4.8.1 Water System

### Potable water.

Potable water systems would be designed to County standards.

The County of Maui currently operates the Mahinahina Water Treatment Facility (MWTF), a surface water treatment plant located near the northeast corner of the Master Plan Area. Currently, the County has an agreement to withdraw up to 5.0 million gallons per day (mgd) from the Honokōhau/Honolua Ditch system. The MWTF is designed to produce up to 3.2 mgd of water and currently produces an average of 3.0 mgd. The MWTF feeds the 2.0 million-gallon DWS Honokōwai Reservoir at an elevation of 250 feet AMSL. A 20-inch waterline runs from the Honokōwai Reservoir to Honoapi'ilani Highway, where it reduces to a 16-inch waterline at Lower Honoapi'ilani Road.

### Non-potable water.

DHHL also intends to utilize surface water from the Honokōhau Ditch and Honokōhau Stream to provide non-potable irrigation for homestead farms.

An alternative water source providing non-potable water is the R-1 treated wastewater from the Lahaina Wastewater Reclamation Facility (LWWRF). Recycled wastewater treated to the R-1 level can be used for golf course irrigation, landscape irrigation and food crops. The LWWRF treatment process is constructed to treat 100 percent of its effluent to R-1 quality standards.

The County of Maui Department of Environmental Management (DEM) has an existing pipeline that connects to the Honokōwai Reservoir, located at approximately 300 feet AMSL. There is also an existing pipeline from the Honokōwai Reservoir to the Upper DLNR Reservoir (Field 140 Reservoir), which is located to the east of the Master Plan Area. The County's reuse system extends from the LWWRF to the DLNR Reservoir at an elevation of approximately 700 feet AMSL.

Final Environmental Assessment- Finding of No Significant Impact

### POTENTIAL IMPACTS AND MITIGATION MEASURES

No adverse impact is anticipated regarding water.

### Potable water.

The total average daily demand of the Master Plan Area is projected to be 949,680 gpd (0.94968 mgd) at full buildout.<sup>9</sup> Refer to Appendix F for water demand calculations. The Mahinahina Water Treatment Facility is on DHHL land. The DWS and DHHL have a license agreement that allows the County DWS to utilize DHHL land for the Mahinahina Water Treatment Facility and in exchange for the use of DHHL land, the County DWS has committed to provide DHHL with 200,000 gpd of water. A portion of the 200,000 gpd water commitment will be utilized for DHHL's Villages of Leiali'i 1B residential homestead development (approximately 200 to 250 single-family residential lots) leaving a remainder of 50,000 to 80,000 gpd<sup>10</sup> of potable water for DHHL's Honokowai Phase I development of approximately 56 agriculture homestead lots and park.

Additionally, DHHL is collaborating with the Hawai'i Housing and Finance Development Corporation (HHFDC) to develop an intergovernmental agreement to develop a new well in Honokōwai. Assuming the future capacity of the new well is 1 mgd and a 50-50 share of the state's portion of water from the well between DHHL and HHFDC, the new well could provide 200,000 gpd to 250,000 gpd.<sup>11</sup> Water from the planned DHHL and HHFDC well will provide water to Phase II of the DHHL Honokōwai development which will consist of the remaining agriculture lots on the northern-side of the gulch as well as residential homestead and multi-family housing opportunities for beneficiaries.

It is anticipated that a third water source may need to be developed to accommodate the potable water needs of full buildout of the DHHL Honokōwai master plan. CWRM is the agency responsible for administering the State Water Code under which all waters of the State are held in trust for the benefit of its citizens. CWRM has established a sustainable yield of 6 million gallons a day for the Honokōwai aquifer. Future DHHL groundwater development will be mindful of the sustainable yield for the Honokōwai aquifer and work with CWRM to ensure that future groundwater use does not significantly impact the long-term sustainability of the aquifer.

<sup>&</sup>lt;sup>9</sup> Fire flow is not included in demand calculations. Since DHHL intends to connect to the existing DWS system, the storage for fire flow is already provided for in DWS' existing tank. The fire flow for agricultural properties is 500 gpm and 1,000 gpm for rural and single-family homes, respectively.

<sup>&</sup>lt;sup>10</sup> Assumes a single-family home uses 600 gpd.

<sup>&</sup>lt;sup>11</sup> The current policy and practice of the Maui County DWS is to subtract one-third of the capacity of water from a well because the well pump will be off-line for 8 hours and will not be running 24 hours a day. The County DWS will then take another one-third of the remaining water for its own use leaving the remaining water available for the developer's use. In the case of new Honokōwai well: 1 mgd - 0.333 mgd (one-third of total capacity) = 0.666 mgd. 0.666 mgd - 0.228 mgd (one-third of 0.666 mgd) = 0.438 mgd for developer(s). DHHL and HHFDC will equally split the remaining 0.438 mgd among themselves. DHHL's share of water could be between 200,000 to 250,000 gpd.

### Non-potable water.

Substantial irrigation demand for the Master Plan Area will be met by non-potable sources such as R-1 effluent and surface (ditch) water.

At its May 2021 regular meeting, CWRM approved a DHHL surface water reservation request of 2.0 mgd to meet DHHL's foreseeable future non-potable water needs in Honokōwai. The DHHL 2.0 surface water reservation will be serviced by the Honokōhau Ditch from the Honokōhau Stream.

During the Draft EA consultation period, DWS commented that DHHL should seek alignment with the WUDP by ensuring R-1 recycled water use from the adjacent Lahaina Wastewater Treatment Facility, either as the sole non-potable source; or if necessary, blended with R-1, in order to accommodate crops sensitivities to R-1. Refer to Appendix A2 for DHHL's response. DHHL will seek to work with the County to utilize R-1 water for non-potable uses.

Based on the information provided to DHHL from the CWRM, the estimated irrigation demand in the Master Plan Area is 4,849 gallons per acre per day. The three land use alternatives being considered include significant areas set aside for subsistence agriculture, which could utilize R-1 water for irrigation purposes. In this case, the probable R-1 demand for the agricultural lots would be 1.978 mgd. The current R-1 surplus could meet the higher range of the probable R-1 demand. However, R-1 water has high salinity that may limit the type of crops that could be supported. An option is to blend the R-1 water with ditch water to reduce the salinity to improve the viability for agricultural purposes. Blending ditch water with R-1 water will reduce the salinity level of the recycled water as well as minimize the amount of water that is diverted from Honokōhau Stream.

The County of Maui has recently completed a \$45 million upgrade to the LWWRF. The County is now in the process of renovating the Honokōwai Reservoir to become a R-1 recycled water storage and distribution reservoir, and carrying out other upgrades to deliver water to the reservoir.

### Consistency with State and County water plans.

The CWRM State Water Projects Plan (SWPP) was adopted in May 2017 and identifies DHHL water needs as well as calculates potable and non-potable water demands based on DHHL plans. The Master Plan Area's projected long-term potable and non-potable water demands (2026 and beyond) are included in the SWPP. The SWPP accounts for 0.6179 mgd of potable water demand and 2.081 mgd of non-potable water demand at Honokōwai, therefore the projected potable water demand (0.94968 mgd) is greater than what is accounted for in the SWPP. The non-potable water demand (1.7 - 2.2 mgd) is generally in line with the demand accounted for in the SWPP. As noted in the SWPP, its projections are planning-level estimates and open to refinement:

Actual water use can vary considerably from planning level estimates. Water project planning is a sequential process whereby initial estimates are typically near the higher end of the range and demands decrease with future iterations as more detail becomes available. Therefore, it is emphasized that the DHHL project

demands should be re-evaluated as more detailed and/or additional information becomes available.

The County of Maui is in the process of updating its Water Use and Development Plan (WUDP). The Draft WUDP was submitted to the Maui County Council in 2019 for adoption by ordinance. An updated WUDP has not yet been formally adopted, however the draft WUDP generally accounts for the Master Plan Area and therefore it is anticipated that water sources are adequate for future development. Moreover, DHHL has been coordinating closely with DWS, the author of the WUDP, to ensure that adequate supply will be available.

# 4.8.2 Wastewater System

The Lahaina Wastewater Reclamation Facility (LWWRF) collects and treats wastewater from Pū'umana to Kapalua. Its design capacity is 9.0 mgd and currently treats about 4.0 mgd of wastewater. The County has an existing wastewater transmission line easement along the northern side of Honokōwai Stream. Within the easement area, there is a 20-inch transmission force main that can be used to deliver R-1 water to the Honokōwai Reservoir and the DLNR Upper Reservoir site. The County is in the design stage of renovating these R-1 facilities to become the core storage and distribution components in its recycled water network.

During the Draft EA consultation period, DWS commented that DHHL should seek alignment with the WUDP by ensuring R-1 recycled water use from the adjacent Lahaina Wastewater Treatment Facility, either as the sole non-potable source; or if necessary, blended with R-1, in order to accommodate crops sensitivities to R-1. Refer to Appendix A2 for DHHL's response. DHHL will seek to work with the County to utilize R-1 water for non-potable uses.

The treated effluent from the LWWRF is of R-1 quality. Of the 4.0 mgd of treated wastewater, approximately 600,000 gallons per day (gpd) during the wet season and 2.0 mgd during the dry season of the R-1 water is transmitted to existing recycled water users. The R-1 water that is not recycled is disposed of through injection wells. Currently, there are approximately 2.0 mgd of R-1 water available. Refer to Section 4.8.

Most of the Master Plan Area is above the Underground Injection Control line (UIC Line). See Figure 17. See Section 3.4.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

No adverse impact is anticipated regarding wastewater. Presently, the LWWRF has capacity available to accommodate the wastewater generated from the Master Plan Area. Refer to Appendix F for wastewater generation calculations (Appendix C of the Preliminary Infrastructure Analysis Report). Wastewater generation for the anticipated preferred alternative was calculated to be 380,915 gpd. DHHL anticipates that the County would be able to provide the necessary regional infrastructure and DHHL will develop the onsite infrastructure to provide service to its beneficiaries in addition to operating and maintaining the onsite wastewater system.

Underground Injection Control (UIC) Below UIC Line Above UIC Line

Source: ESRI online basemap. DOH SDWB UIC Program, 2004. Disclaimer: This graphic has been prepared for general planning purposes only.

DHHL is also coordinating on a potential shared wastewater corridor within the Master Plan Area with the neighboring Pulelehua planned development. (During the Draft EA consultation period, DEM commented: County highly recommends collaboration with the adjoining Pulelehua project in developing its offsite sewage system to the Lahaina WWRF.) Due to the terrain and drainageways within the Master Plan Area, an onsite sewer lift station will be required to transport the wastewater generated onsite to the LWWRF.

DHHL is anticipating the use of individual wastewater systems (IWS) for the (1- to 2-acre) agricultural lots. Currently, the Department of Health regulations include a 50-lot maximum for the use of IWSs, although if public benefit can be shown, a variance may be allowed. Lots with a minimum size of one acre can utilize an IWS, however, only one dwelling is allowed on the lot. The estimated cost for the installation of an IWS is \$15,000. Refer also to Section 6.4.

During the Draft EA consultation period, DWS provided a list of standard BMPs to ensure water quality and pollution prevention, including septic system BMPs. Any beneficiaries utilizing individual septic systems will be encouraged to implement BMPs for septic systems, to minimize environmental impacts and maintenance costs and meet DOH requirements.

Construction of underground injection wells is not proposed. The Proposed Action is anticipated to have a positive impact with regard to LWWRF's existing injection wells, in that DHHL's use of a substantial quantity of R-1 quality effluent from the LWWRF (see Section 4.8) would reduce the volume of R-1 effluent disposed of through injection wells.

Proposed uses have been sited within the Master Plan Area to avoid placing sensitive uses near the LWWRF, to avoid noise and/or impact odors that may result from the County's LWWRF operations.

# 4.8.3 Drainage System

Honokōwai Stream traverses through DHHL lands in an east to west direction. Kanaunau Stream traverses along the southern boundary of the Master Plan Area and intersects Honokōwai Stream near the southwestern corner. Onepeha Stream parallels Honokōwai Stream and terminates in the Honokōwai Reservoir.

Under existing conditions, approximately 30 percent of the northern section of the Master Plan Area sheet flows toward and onto Honoapi'ilani Highway and the southern 70 percent of the Master Plan Area sheet flows into the Kanaunau Gulch and Honokōwai Stream. Runoff from both discharges into the Honokōwai Basin where it is stored and eventually overtops an existing spillway into a drainage channel that discharges into the ocean, to the west of the Master Plan Area. No additional flow to the Honoapi'ilani Highway right-of-way is anticipated.

It is estimated that the existing runoff from a 100-year, 24-hour storm from the Master Plan Area is 781 cubic feet per second, resulting in a total volume of 9,601,148 cubic feet (220.4 acre-feet). See Also Section 3.5.1.

Final Environmental Assessment- Finding of No Significant Impact

# POTENTIAL IMPACTS AND MITIGATION MEASURES

Mitigable impact. The intent for drainage of the Master Plan Area is to limit the need for extensive grading as much as possible and to minimize the alteration of the existing drainage pattern. Development of the Master Plan Area will include the implementation of site specific BMPs during construction to provide erosion control and minimize impacts to surrounding properties. BMPs may include, but are not limited to:

- Prevention of cement products, oil, fuel, and other toxic substances from falling or leaching into the water.
- Prompt and proper disposal of all loosened and excavated soil and debris material from drainage structure work.
- Retention of ground cover until the latest possible date.
- Stabilization of graded areas by sodding or planting as soon as possible.
- Early construction of drainage features.
- Minimize time of construction.

To maintain the existing drainage patterns across the Master Plan Area, lands designated for subsistence agricultural homesteads (1 to 2 acre lots) will feature grassed roadway and lot swales as the major drainage component. The roadway swales will traverse between lots and discharge into the Kanaunau Stream or Honokōwai Stream, as the Master Plan Area does under existing conditions.

Retention basins will be constructed within the existing drainageways with volume in excess of the increase in runoff from the 100-year, 24-hour storm. The parcels designated for residential homesteads, multi-family homes, parks, commercial, and/or industrial development will be required to mitigate the increase in runoff from a 50-year, 1-hour storm within each designated development site. Runoff in excess of this recurrence interval will be conveyed to the master drainage system provided along the common roadways.

During the Draft EA consultation period, HDOT commented:

No additional discharge of surface water run-off onto the Honoapiilani *(sic)* Highway ROW is permitted. This includes the use of the existing State drainage culverts and channels. All additional stormwater runoff from the project site shall be managed and mitigated onsite. The Final EA shall verify and clearly state no additional flow to the State highway is anticipated.

No additional flow to the Honoapi'ilani Highway right-of-way is anticipated.

# 4.8.4 Solid Waste

The County of Maui Solid Waste Division operates and maintains four County-owned landfills (including two on Maui island). The Central Maui Landfill is located approximately 30 miles from the Master Plan Area and is the largest municipal landfill in the State of Hawai'i. This facility accepts refuse from commercial and residential customers as well as provides recycling services.

The Central Maui Landfill also accepts green waste and construction waste from demolition and construction activities.

The Master Plan Area has deposits of solid waste located at TMK parcel (2) 4-4-002:018 which were not deposited there by DHHL as noted by the State of Hawai'i Department of Health – Solid and Hazardous Waste Branch. Refer to Appendix A1 for a copy of the letter and DHHL's response.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

Regarding existing onsite solid waste issues, DHHL will undertake the necessary mitigation measures to ensure no significant adverse impact occurs. During the pre-assessment consultation period, the State of Hawai'i Department of Health – Solid and Hazardous Waste Branch commented:

In our review of records, waste disposal on portions of (2) 4-4-002:018 has been identified by other state agencies including the DHHL. We understand that DHHL is in the process of correcting this activity. Prior to using this land for any proposed future use, removal and proper disposal of dumped waste and necessary remedial actions, such as conducting sampling and testing of surface and/or subsurface conditions, and remediating the land based on analytical data, should be conducted.

DHHL will comply with the recommendations from the DOH – Solid and Hazardous Waste Branch, and is taking active measures to prevent unauthorized solid waste dumping from occurring in the future.

No adverse impact is anticipated with regard to the County's solid waste operations. It is anticipated that the County will provide trash collection services to the Master Plan Area. The uses proposed for the Master Plan Area will not significantly impact the capacity of the Central Maui Landfill, as most new site users will be existing residents. Heavy industrial uses that would generate high amounts of refuse are not proposed.

# 4.8.5 **Other Utilities**

Electrical service on the island of Maui is provided by the Hawaiian Electric Company (HECO). There are three existing 69-kV overhead utility distribution systems from the HECO Mā'alaea Power Plant that services the West Maui area. There are overhead electrical lines on the east side of Honoapi'ilani Highway that crosses to the west side fronting the Master Plan Area. There are onsite overhead electrical lines that traverse through the Master Plan Area.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

Electrical and telephone services are currently sized, adequate, and available to service the Master Plan Area.

DHHL will need to work with HECO to utilize their existing facilities to service the Master Plan Area. The DEM may be interested in exploring photovoltaic alternatives to offset the pumping

Final Environmental Assessment- Finding of No Significant Impact

cost for the R-1 water to the upper reservoirs. DHHL could investigate the option of working with the County of Maui and the DEM on this alternative.

DHHL has developed and is implementing its own renewable energy policy (https://dhhl.Hawai'i.gov/wp-content/uploads/2011/09/DHHL-Energy-Policy.pdf)

### 4.9 SOCIO-ECONOMIC CHARACTERISTICS

#### 4.9.1 **Population**

#### County population.

The County of Maui includes the islands of Maui, Moloka'i, Lāna'i, and Kaho'olawe, with an estimated 95 percent of the County's residents living on Maui Island in 2017. As a whole, Maui County is the third most populous of the four counties of Hawai'i, with an estimated 167,210 persons in 2018, up 7.9 percent from the 154,924 persons counted at the 2010 Census. (UHERO, 2019)

While population continues to grow, the rate of increase is slowing. County population increased 21.0 percent between 2000 and 2010, at annual rates of 2.1 percent between 2000 and 2005, and 1.6 percent between 2005 and 2010. Going forward, the State expects the County population will increase at 1.1 percent per annum to 2020, with annual rates of increase declining to 0.7 percent between 2035 and 2040. (DBEDT, 2018) This would result in a total County population of some 205,040 persons in 2040. The Maui County Department of Planning periodically updates its General Plan and Community Plans, and produces socio-economic forecasts for the County, Islands and Community Plan (CP) areas. The latest materials available remain in draft form as of this writing and were prepared prior to the release of the State projections referenced above. However, this latest County study (Draft County Forecast) sheds light on qualitative aspects of Maui's growth, and offers insights to trends for Maui Island and its CP areas. (Planning Department, 2014)

Demographic trends described in the Draft County Forecast include:

- De facto population, including visitors present but excluding residents temporarily absent, is expected to increase to 270,285 by 2035, a gain of more than 60 percent since 2010.
- The population is aging: the median age increased from 33.5 to 39.6 years between 1990 and 2010.
- County households are becoming smaller: The County average declined from 2.99 persons per household in 1990 to 2.87 persons per household in 2010, although it the report notes it is unclear how the coincidence of aging and smaller households will interact in the coming years.

There are currently no residents within the Master Plan Area.

#### DHHL beneficiary community.

As of November 2021, DHHL was providing a total of 1,404 active homestead leases on Maui island and 2,286 within Maui County, contributing to a total of 9,986 across the state. Most of the Maui island homesteads are located in Central Maui or East Maui, with only 103 leases currently in West Maui (at Leali'i).

DHHL is actively pursuing more information about its beneficiary housing and agricultural needs.

DHHL is working with a consultant to conduct an update of its beneficiary housing surveys, last completed in 2014. That study determined that, statewide, the percentage of DHHL lease applicants earning less than 80 percent of the area median income continues to decrease; in 2014, 45 percent of applicants were classified as below that income benchmark, compared to 48 percent in 2008 and 56 percent in 2003. The most popular housing option for statewide applicants (who would be eligible for a lease on any island) was determined to be a single-family residence that is move-in ready. Between 2008 and 2014, the number of housing applicants increased by 33 percent.

DHHL is also conducting a survey of agricultural lease applicants and lessees, to develop its Agriculture Program Plan. Responses were received from 193 participants, and data analysis is underway.

### POTENTIAL IMPACTS AND MITIGATION MEASURES

No adverse impacts are anticipated. The Proposed Action will provide homestead awards to native Hawaiians, many of whom are low-income families. Therefore, the Proposed Action will benefit rather than expose or disproportionately adversely affect minority or low-income persons in comparison to the rest of the population.

The past and ongoing population increases as described above, suggest a corollary need for more jobs and housing, as well as substantial investments in public and commercial services and infrastructure. The Proposed Action stands to provide both jobs and housing.

### 4.9.2 West Maui Community Plan Area

The Master Plan Area is located in the West Maui Community Plan (CP) Area. Although heavily impacted by the COVID-19 pandemic, West Maui has historically provided the County's strongest tourism economy, and attracted the island's largest average daily visitor population of around 33,000 in 2016.

The population of West Maui increased from just over 22,000 in 2010 to nearly 25,000 in 2017. As of 2017, there were 8,742 households, representing a 1.7% increase compared to 7,759 households in 2010. The average household size in 2017 was 2.8 persons, and the median age was 40 years old. Nearly 80% of West Maui residents were over the age of 18. Between July 2004 and July 2016, Maui County's population increased by over 19,000 persons. The natural increase due to local births less deaths was 11,588(59%) persons, while international and domestic migration added 7,907 (41%) persons to the increase. (County of Maui Department of Planning, 2018)

As of 2017, the population of West Maui was less diverse than most of Maui County and the state, with just eight percent of residents identifying as Pacific Islanders. The median income in 2017 was \$76,817 (compared to \$72,833 for the county as a whole, and \$73,636 for the state). The average household income was \$103,107.

Household net worth was heavily distributed to the high and low ends of the scale, with the lower 23% of West Maui households having a net worth of less than \$15,000 and the upper 22% having a net worth of over \$500,000 or greater. As of 2017, 28% of West Maui residents over the age of 25 had a high school degree or GED, 10% had an associate's degree, 22% had a bachelor's degree, and 6% had a graduate degree. (County of Maui Department of Planning, 2018)

As of 2018, West Maui was home to half of the island's accommodations and food services jobs. As of 2017, 206 accommodation and food services firms employed nearly 9,000 people (accounting for about half of West Maui's jobs). The retail trade sector employed over 2,500 people (14% of West Maui's jobs). Around 17.5% of primary jobs in West Maui were in the food preparer/server category, compared to 10.2% for Maui County, 8.1% statewide, and 6.1% across the United States.

In 2015, 13,599 West Maui residents had jobs and most (57%) of those people worked in West Maui.

In 2017, there was a 12% increase in housing units in West Maui, however only 31% of those were owner occupied and 35% were renter occupied. The remaining 34% of homes were vacant (listed for sale, listed for rent, or second homes).

# POTENTIAL IMPACTS AND MITIGATION MEASURES

No adverse impacts are anticipated. As with the general population, the Proposed Action will benefit rather than expose or disproportionately adversely affect minority or low-income persons in comparison to the rest of the population of West Maui.

DHHL looks forward to providing housing and/or employment opportunities and a safe environment for its beneficiaries, which will likely benefit the wider West Maui community.

# 4.10 PUBLIC SERVICES AND FACILITIES

Refer to Figure 18 for a map of public facilities.

# 4.10.1 Schools

The closest State Department of Education (HIDOE) public schools include Nahienanea Elementary School, King Kamehameha III Elementary School, Lahaina Intermediate School, and Lahainaluna High School.

Source: ESRI online basemap. County of Maui, 2017. State of Hawaii, 1998, 2012. DOE, 2017, Hawaii EOEL, 2012. Disclaimer: This graphic has been prepared for general planning purposes only.

Linear Scale (Miles) 0.25 0.5

0

Final Environmental Assessment- Finding of No Significant Impact

### POTENTIAL IMPACTS AND MITIGATION MEASURES

During the pre-assessment consultation period, HIDOE commented:

The HIDOE schools servicing the Master Plan Area are King Kamehameha III Elementary, Lahaina Intermediate, and Lahainaluna High. All three schools are currently over capacity. This over capacity is expected to continue over the next five years.

The proposed Project is located with the West Maui School Impact Fee District with fees of \$5,778 for single-family units and \$2,055 for multi-family units. The Proposed Action's residential component will be subject to this fee.

The alternatives proposed for the Master Plan Area have the potential to increase the school-age population. To mitigate any potential impacts to schools, DHHL will coordinate with HIDOE regarding the West Maui School Impact Fee District based on the chosen residential composition for the Master Plan Area. (See Appendix A1 for HIDOE's letter and DHHL's response.)

Various beneficiary stakeholders have expressed enthusiasm for uses such as a Hawaiian language school, cultural education facilities, a charter school and daycare for the Master Plan Area. If realized, these would contribute positively to Maui's educational opportunities.

#### 4.10.2 Police, Fire and Medical Services

#### **Police Protection**

The Master Plan Area is located in Lahaina Patrol District IV. The district has a number of programs, including Community Oriented Policing, School Resource Officer, Bike Detail, Visitor Oriented Policing, Parks Patrol Officer, Citizens Patrol, and Parking Enforcement Officer. The district police station is located at 1850 Honoapi'ilani Highway, just under four miles from the Master Plan Area.

#### **Fire Protection**

The Master Plan Area is less than four miles from the Lahaina Fire Station, located south of the Master Plan Area at 1860 Honoapi'ilani Highway, and the Nāpili Fire Station, located north of the Master Plan Area at 4950 Hanawai Street.

#### **Medical Services**

The closest medical services to the Master Plan Area are the Kaiser Permanente Lahaina Clinic and the Lahaina Satellite Clinic, both located approximately five miles south of the Master Plan Area. The Maui Memorial Medical Center is the nearest hospital, approximately 27 miles from the Master Plan Area in Wailuku, which offers 24/7 emergency services, a variety of inpatient and outpatient services, and is the only acute care hospital on the island.

Final Environmental Assessment- Finding of No Significant Impact

#### POTENTIAL IMPACTS AND MITIGATION MEASURES

The Master Plan Area will not impact police, fire, or medical services. The Master Plan Area is within adequate response zones of two fire stations, and developed areas of the Master Plan Area will have sufficient water flow and fire safety mitigations.

During the pre-assessment consultation period, the County of Maui Department of Fire and Public Safety commented:

Where the proposed project abuts undeveloped lands, fire prevention measures shall be incorporated into the proposed project to address the concern of wildland fires. A minimum of 30 feet of defensible space shall be provided between proposed structures and the undeveloped lands. Our office can assist with this matter.

Our office also reserves the right to comment on the proposed project during the subdivision process and the building permit review process when detailed plans for this project are routed to our office for review. At that time, fire department access, water supply for fire protection, and fire and life safety requirements will be addressed.

Refer to Appendix A1 for DHHL's response. A minimum of 30 feet of defensible space will be provided between proposed structures and undeveloped lands. DHHL and its technical consultants will consult with the County of Maui Department of Fire and Public Safety as needed.

Refer to Section 3.5.7 for further discussion of wildfires.

During the Draft EA public comment period, the County of Maui Police Department (MPD) commented:

The number of people residing within the development will increase the number of vehicles on/ the roadway. The anticipation of the future Lahaina Bypass passing through the project will alleviate some congestion but it is unknown to what extent. Additional entry/exit roads will be/ used to access Honoapi'ilani (*sic*) Highway. This will affect Police operations due to the increase in /residents and traffic this project will bring to the Honokōwai (*sic*) area.

To minimize potential impacts to police services, DHHL will coordinate with MPD regarding traffic. During the Draft EA consultation period, MPD provided additional written comments mentioning the Bypass route. DHHL's response communicated to MPD that lands set aside for the Bypass are no longer included in the Proposed Action.

Additionally, MPD commented that the Proposed Action would likely necessitate additional beats. DHHL will work with MPD to ensure that adequate law enforcement and safety services will be available to the future community.

### 4.10.3 **Recreational Facilities**

There are several public parks in the vicinity of the Master Plan Area, including Honokōwai Beach Park, Kahekili Beach Park, Pōhaku Park, Nāpili Park, Hanakoʻo Park, Wahikuli State Wayside Park, Wahiku Park, and Wahiku Terrace Park. Other recreational facilities, and open spaces in the vicinity include the Kaʻanapali Golf Course, Will's Beach, Kekaʻa Open Space Park, and Kahana Beach.

### POTENTIAL IMPACTS AND MITIGATION MEASURES

The Master Plan will not adversely impact nearby recreational facilities. There is a variety of recreational facilities to serve the Master Plan Area within reasonable distance with adequate capacity to accommodate future residents.

### 4.10.4 Airport

Kapalua Airport is located north of the Master Plan Area. Kapalua Airport (JHM) generally services the resort destinations of Kā'anapali and Lahaina. Kapalua Airport is served by commercial propeller air carriers and commuter/air taxi aircraft only. The facility started as a private facility until its acquisition by the State of Hawai'i in 1993. The facility consists of a single runway, terminal facilities, and support facilities. The airport does not possess air cargo facilities. The runway and other facilities cannot be expanded without changes to the airport's existing agreement with the County of Maui. Operations are limited to daytime hours only.

The Master Plan Area is located approximately 0.29 miles from Kapalua Airport at its closest point. As such, DHHL will restrict agricultural activities that could attract wildlife that are potential hazards to aircraft operations.

# POTENTIAL IMPACTS AND MITIGATION MEASURES

No adverse impacts on airport operations or facilities are anticipated. To prevent potential impacts to airport activities from wildlife, glint/glare hazards, obstructions and other issues, the Federal Aviation Administration (FAA) is being consulted to ensure compliance with any applicable rules and laws including those outlined in the State Office of Planning (now Office of Planning and Sustainable Development's) technical assistance memorandum regarding airports in the state (State Office of Planning, 2016). A Notice of Proposed Construction or Alteration (or multiple notices) will be submitted to the FAA for any construction or alternation within 20,000 feet of a public use or military airport which exceeds a 100:1 surface from any point on the runway of each airport with its longest runway more than 3,200 feet. DHHL will restrict agricultural activities that could attract wildlife to nearby airport facilities. DHHL acknowledges that photovoltaic systems can cause visual and/or radio interference for aircraft pilots, and that any such system in the Master Plan Area should be prepared for immediate hazard mitigation upon notification by HDOT and/or FAA.

To mitigate impacts to site users related to airports and airfields, should DHHL suspect that fumes, smoke, noise, vibrations, odors, and other airport-related exposures may impact the

Final Environmental Assessment- Finding of No Significant Impact

anticipated uses of its lands, more protective mitigation strategies will be considered at such time, depending on the nature of the concern. Should other unforeseen impacts arise from aircraft activities which are not mitigated by the strategies described in this EA, DHHL will consider additional measures.

(This page left blank intentionally.)

# **5 LAND USE CONFORMANCE**

### 5.1 **DHHL PLANNING SYSTEM**

The Hawaiian Homes Commission Act (Sections 204 and 206), which has been incorporated into Article XII of the Hawai'i State Constitution, vests DHHL with exclusive authority to control its lands, and the anticipated land uses are generally consistent with the Department's existing Maui Island Plan.

In 2004, DHHL adopted the (DHHL) *Maui Island Plan* which examined all DHHL land in terms of development constraints and opportunities and other criteria, in order to assign appropriate Land Use Designations to each parcel. The *DHHL Maui Island Plan* designated the Master Plan Area for a mix of land uses as shown below and in Figure 5.

Land Use (per 2004 Maui Island Plan)	Number of Lots	Approx. Acres
Residential (10,000 sf lots) Phase 1	337	91
Residential (10,000 sf lots) Phase 2	74	20
General Agriculture		407
Community Use		19
Industrial		5
Commercial Use		30
Supplemental Agriculture (min. 5 acre lots)	15	205
TOTAL	426	777

### Background.

Across the islands, kuleana lands slowly disappeared since the days of the Māhele. In 1940, only 35% of these lands had survived, and by 1980, only 19% remained. Areas that were impacted the most included plantation districts where large-scale farms slowly surrounded and impeded natural resources. In Honokōwai, none of the 442.66 acres of Land Commission Award/Royal Patent Grant awards within the project area remained owned by their original claimant.

In 1992, the Federal Government reallocated money and additional lands to the Hawaiian Home Lands program "as compensation for the state's improper or unauthorized use or transfer of 30,000 acres of Hawaiian home lands since statehood in 1959". This process resulted in \$13.8 million "set aside for DHHL to develop more homes and agricultural lots for native Hawaiians," specifically \$925,000 to develop former sugar cane lands at Honokōwai. By 2002, Maui had received an additional 2,625 acres of public lands, and by 2003, DHHL was prepared to begin development planning at Honokōwai.

As noted in DHHL's Maui Island Plan, 510 acres of the 776.5 acres of available land in Honokōwai (TMK 4-4- 01:15, 36 and TMK 4-4-02: 03, 08, 09, 11, 15, and 18) were in use by the Maui Land and Pineapple Company, Inc. (TMK 4- 4-02:15 and 18, portion) until their lease expired in 2011. In December of 2009 following a global recession, M L & P closed their pineapple operations and terminated their lease. DHHL has continued to lease out lands to private pineapple farmers and local resorts, until 2019 when the current master planning process began. Refer to Appendix D.

### 2003 Beneficiary Engagement.

After a beneficiary-engagement planning process, in 2003, DHHL proposed to develop its lands in Honokōwai. At that time, it was proposed that the area north of Honokōwai Gulch would include up to 1,000 single-family homesteads. The plan also included passive and active recreational areas, including a linear park running mauka-makai, and sites for community center/health care/churches. An 18-acre site for the possible development of a private school and a site for future kūpuna housing were also included. Near Honoapi'ilani Highway, fourteen acres were identified for future retail commercial development. It was proposed that the area south of Honokōwai Gulch include light industrial uses and small and large agricultural lots. The 2003 master plan showed a "residential expansion area" past the northernmost property boundary, between the current property boundary and Mahinahina Gulch. This 68-acre strip was not owned by DHHL and was under cultivation by Maui Land and Pineapple Company (now part of the planned Pulelehua community). The expansion area would have accommodated an additional 234 residential homestead lots over the 1,000 proposed. An Environmental Impact Statement Preparation Notice (EISPN) was published in 2003 for the master plan.

### 2009 Regional Plan for Villages of Leiali'i and Honokōwai

DHHL completed a regional plan for its West Maui lands in December 2009, encompassing both the Master Plan Area and the recently acquired Villages of Leiali'i Village 1-A and 1-B which had been transferred to DHHL in 2004. The regional plan proposed a higher density residential development at Honokōwai. This plan envisioned 947 residential lots, and a mix of community, industrial, commercial, and general agricultural uses at Honokōwai.

### 2019-2020 Beneficiary Engagement and Resulting Master Plan Update.

When DHHL acquired the Leiali'i lands, some of the infrastructure for residential development had already been constructed as it was part of the Master Plan developed by the State's Hawai'i Housing Finance and Development Corporation (HHFDC). Since the planning, permitting and partial construction of infrastructure was already completed, DHHL was able to quickly complete Phase IA of the project which created 104 residential lots. Also part of the acquisition, Phase IB would create another 250 residential lots. This unexpected acquisition of lands that were ready for the construction of 350 residential lots shifted the Department's regional focus from Honokōwai to Leiali'i. However, while the acquisition of Leiali'i addressed residential homestead needs in the region, it did not address agricultural, commercial, or community land use needs expressed in the original Honokōwai Master Plan. In addition, since the original Honokōwai Master Plan was developed with a high level of beneficiary involvement, beneficiaries were diligent in reminding the Department that the Honokōwai Master Plan had not been implemented. With continued beneficiary pressure to award lands at Honokōwai and in light of

### Final Environmental Assessment - Finding of No Significant Impact

the ability for Leiali'i to address some of the demand for residential homesteads, DHHL's Planning Office withdrew the 2003 Honokōwai EISPN on November 23, 2019, and began a master plan update process in 2019. Three outreach meetings were held, with a fourth meeting held to address written comments on the Draft EA. The meetings are summarized below.

The first beneficiary meeting was held on September 25, 2019. The master planning team presented on the purpose and scope of the master planning effort, the Master Plan Area, development constraints and opportunities, and an overview of prior planning efforts. An overview of DHHL's subsistence agricultural homestead lease was also provided, as it is relatively new compared to other types of homestead leases. Beneficiaries participated in focused, small group exercises to provide input on their preferred development patterns, infrastructure, community uses, and lot configuration. Beneficiaries were also invited to participate in an online survey to determine previous agricultural experience, agricultural preferences, and needs for the future.

The second beneficiary meeting was held on February 26, 2020. Findings from the first beneficiary meeting were presented, along with an overview of anticipated development on adjacent lands, site conditions within the Master Plan Area, and planned conservation areas. The master planning team sought beneficiary feedback on three alternative plans, which had been developed based on input received at the previous meeting.

The third beneficiary meeting was held virtually on November 11, 2020. DHHL presented the anticipated preferred master plan alternative, which had been identified based on input received at the previous meeting. Beneficiaries confirmed that this is the preferred alternative, and expressed the additional desire that early stages of development (Phase 1) include subsistence agricultural homestead lots.

As noted above, DHHL's Beneficiary Consultation process resulted in the development of three alternative land use plans. They are differentiated by their development intensity (refer to Section 6.3). The alternative land use plans can be described as:

- Subsistence Agriculture with Community Farming
- Subsistence Agriculture Only; and
- Single-Family and Multi-Family with Subsistence Agriculture (preferred alternative)

The beneficiary community's preferred alternative is also the alternative that would generate the most homes/lots. For the purposes of this "programmatic" EA, since the other alternatives would result in lesser numbers of homes/lots (relative to the development potential shown in Figure 5), analyzing the alternative that would generate the most homes/lots should also adequately address impacts of the other alternatives, which would generate less impacts. (DHHL notes that the less impactful alternatives would also be less consistent with DHHL's mission "...to develop and deliver lands to native Hawaiians.") Refer to Section 6.3 for a discussion of the alternative plans for the Master Plan Area.

A fourth beneficiary meeting was held virtually on November 8, 2021. The purpose of this meeting was to present proposed revisions to the anticipated preferred alternative, which was

Final Environmental Assessment- Finding of No Significant Impact

revised due to comments from HDOT during the Draft EA consultation period. As noted previously, to address this comment, DHHL reallocated lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. Figure 5 shows the revised master plan.

Refer to Section 2.3 for a detailed description of the proposed uses. Separate from the Chapter 343, HRS process, DHHL will pursue an amendment to its Maui Island Plan that is consistent with the anticipated uses of the Master Plan Area.

# 5.2 STATE OF HAWAI'I

# 5.2.1 Chapter 343, Hawai'i Revised Statutes

This document has been prepared in accordance with the provisions Chapter 343, HRS (Environmental Impact Statement Law) and Title 11, Department of Health, Chapter 200.1, Hawai'i Administrative Rules (Environmental Impact Rules).

Section 343-5, HRS, establishes nine "triggers" that require compliance with the State's EIS law. The triggers for the Proposed Action/Master Plan include:

• Propose the use of state or county lands or the use of state or county funds.

The Master Plan is an Agency Action that will be partly funded by Capital Improvement Funds earmarked for infrastructure planning, design, construction, and related site improvements; the use of State or County lands or funds is an action that "triggers" the preparation of an EA or EIS. As plans advance, the Master Plan may further involve or impact State and/or County lands or funds relating to infrastructure improvements for public facilities, roadways, water, sewer, electrical utilities, drainage, and/or other facilities. While the precise nature or scale of these future improvements is not fully known at this time, the EA is intended to address current and future instances involving the use of State and/or County lands and funds relating to the Master Plan.

To determine whether the implementation of the Master Plan may have a significant impact on the physical and human environment, all phases and expected consequences of the Master Plan have been evaluated, including potential primary, secondary, short-range, long-range, and cumulative impacts. Based on this evaluation, DHHL is issuing this Finding of No Significant Impact (FONSI). The supporting rationale for this finding is based on a review of the significance criteria set forth in Hawai'i Administrative Rules §11-200.1-13. An action shall be determined to have a significant impact on the environment if it may:

- 1. Irrevocably commit a natural, cultural, or historic resource;
- 2. Curtail the range of beneficial uses of the environment;
- 3. Conflict with the state's environmental policies or long-term environmental goals established by law;
- 4. Have a substantial adverse effect on the economic welfare, social welfare, or cultural practices of the community and State;
- 5. Have a substantial adverse effect on public health;
- 6. Involve adverse secondary impacts, such as population changes or effects on public facilities;
- 7. Involve a substantial degradation of environmental quality;
- 8. Be individually limited but cumulatively have substantial adverse effect upon the environment or involves a commitment for larger actions;
- 9. Have a substantial adverse effect on a rare, threatened, or endangered spcies, or its habitat;
- 10. Have a substantial adverse effect on air or water quality or ambient noise levels;
- 11. Have a sunstantial adverse effect on or be likely to suffer damage by being located in an environmentally sensitive area such as a flood plain, tsunami zone, sea level rise exposure area, beach, erosion-prone area, geologically hazardous land, estuary, fresh water, or coastal waters;
- 12. Have a substantial adverse effect on scenic vistas and viewplanes, during day or night, identified in county or state plans or studies; or
- 13. Require substantial energy consumption or emit substanial greenhouse gases.

Please refer to Section 7 for further discussion.

#### 5.2.2 State Land Use Law, Chapter 205, Hawai'i Revised Statutes

The State Land Use Law (Chapter 205, HRS), establishes the State LUC and authorizes this body to designate all lands in the State into one of four Districts: Urban, Rural, Agricultural, or Conservation.

The property is in the Agricultural District. The Hawaiian Homes Commission has ultimate land use authority over Hawaiian Home Lands per the Hawaiian Homes Commission Act, as amended.

#### 5.2.3 **Coastal Zone Management Act, Chapter 205A, Hawai'i Revised Statutes**

The State oversees protection of natural, cultural, and economic resources within the coastal zone, which is defined as all lands of the State and the area extending seaward from the shoreline to the limit of the State's police power and management authority, including the United States territorial sea. As such, the Master Plan Area lies within the CZM Area.

The relevant objectives and policies of the Hawai'i CZM Program, along with a detailed discussion of how the Master Plan conforms with these objectives and policies, is discussed below.

(E) Encourage research and development of new, innovative technologies for exploring, using, or protecting marine and coastal resources.			Х
Discussion: The Master Plan does not involve the use and development of marine and coasta	l resour	ces.	

#### Final Environmental Assessment- Finding of No Significant Impact

#### 5.2.4 Hawai'i State Plan, Chapter 226, Hawai'i Revised Statutes

The Hawai'i State Plan (Chapter 226, HRS), establishes a set of goals, objectives and policies that serve as long-range guidelines for the growth and development of the State. The Plan is divided into three parts: Part I (Overall Theme, Goals, Objectives and Policies); Part II (Planning, Coordination and Implementation); and Part III (Priority Guidelines). Part II elements of the State Plan pertain primarily to the administrative structure and implementation process of the Plan. As such, comments regarding the applicability of Part II to the Master Plan Area are not appropriate. The sections of the Hawai'i State Plan directly applicable to the Master Plan Area, along with a discussion of how the Master Plan conforms to the State Plan are included below.

#### Table 5-2: Hawai'i State Plan, Chapter 226, Hawai'i Revised Statutes

HRS § 226-5: Objectives and policies for population.			
<b>Objective:</b> It shall be the objective in planning for the State's population to guide population g consistent with the achievement of physical, economic and social objectives contained in this	growth chapte	to be r.	
Policies:			
(1) Manage population growth statewide in a manner that provides increased opportunities for Hawaii's people to pursue their physical, social and economic aspirations while recognizing the unique needs of each County.			х
(2) Encourage an increase in economic activities and employment opportunities on the neighbor islands consistent with community needs and desires.	х		
(3) Promote increased opportunities for Hawaii's people to pursue their socio-economic aspirations throughout the islands.	Х		
(4) Encourage research activities and public awareness programs to foster an understanding of Hawaii's limited capacity to accommodate population needs and to address concerns resulting from an increase in Hawaii's population.			х
(5) Encourage federal actions and coordination among major governmental agencies to promote a more balanced distribution of immigrants among the states, provided that such actions do not prevent the reunion of immediate family members.			х
(6) Pursue an increase in federal assistance for states with a greater proportion of foreign immigrants relative to their state's population.			Х
(7) Plan the development and availability of land and water resources in a coordinated manner so as to provide for the desired levels of growth in each geographic area.	х		
<b>Discussion:</b> It is not DHHL's policy to attempt to manage population growth. However, implementation of the Proposed Action will increase economic activities and employment opportunities on the neighbor islands consistent with community needs and desires by generating places of employment closer to the workforce who may reside in West Maui. Increased opportunities for employment have the added benefit of allowing Maui residents to pursue their socio-economic aspirations.			of the slands e who g Maui
HRS § 226-6: Objectives and policies for the economy in general.			
<b>Objectives:</b> Planning for the State's economy in general shall be directed toward achievement of the following objectives:			lowing
(1) Increased and diversified employment opportunities to achieve full employment, increased income and job choice, and improved living standards for Hawaii's people.	Х		

Final Environmental Assessment-	Finding of No Significant Impact

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(2) A steadily growing and diversified economic base that is not overly dependent on a few industries, and includes the development and expansion of industries on the neighbor islands.	x		
Policies:			
(1) Promote and encourage entrepreneurship within Hawai'i by residents and nonresidents of the State.			х
(2) Expand Hawaii's national and international marketing, communication, and organizational ties, to increase the State's capacity to adjust to and capitalize upon economic changes and opportunities occurring outside the State.			х
(3) Promote Hawai'i as an attractive market for environmentally and socially sound investment activities that benefit Hawaii's people.			Х
(4) Transform and maintain Hawai'i as a place that welcomes and facilitates innovative activity that may lead to commercial opportunities.			х
(5) Promote innovative activity that may pose initial risks, but ultimately contribute to the economy of Hawai'i.			Х
(6) Seek broader outlets for new or expanded Hawai'i business investments.			х
(7) Expand existing markets and penetrate new markets for Hawaii's products and services.			Х
(8) Assure that the basic economic needs of Hawaii's people are maintained in the event of disruptions in overseas transportation.			Х
(9) Strive to achieve a level of construction activity responsive to, and consistent with, state growth objectives.			Х
(10) Encourage the formation of cooperatives and other favorable marketing arrangements at the local or regional level to assist Hawaii's small scale producers, manufacturers, and distributors.	x		
(11) Encourage labor-intensive activities that are economically satisfying and which offer opportunities for upward mobility.			Х
(12) Encourage innovative activities that may not be labor-intensive, but may otherwise contribute to the economy of Hawai'i.			Х
(13) Foster greater cooperation and coordination between the government and private sectors in developing Hawaii's employment and economic growth opportunities.			х
(14) Stimulate the development and expansion of economic activities which will benefit areas with substantial or expected employment problems.			Х
(15) Maintain acceptable working conditions and standards for Hawaii's workers.			Х
(16) Provide equal employment opportunities for all segments of Hawaii's population through affirmative action and nondiscrimination measures.			Х
(17) Stimulate the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.			х
(18) Encourage businesses that have favorable financial multiplier effects within Hawaii's economy, particularly with respect to emerging industries in science and technology.			Х
(19) Promote and protect intangible resources in Hawai'i, such as scenic beauty and the aloha spirit, which are vital to a healthy economy.			Х

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(20) Increase effective communication between the educational community and the private sector to develop relevant curricula and training programs to meet future employment needs in general, and requirements of new, potential growth industries in particular.			х
(21) Foster a business climate in Hawaiiincluding attitudes, tax and regulatory policies, and financial and technical assistance programsthat is conducive to the expansion of existing enterprises and the creation and attraction of new business and industry.			х
<b>Discussion:</b> While mostly not applicable, development of the Master Plan Area will d opportunities in West Maui. Agriculturally-based employment opportunities have the added the economic base so that is not overly dependent on a few industries, such as the visitor ind	iversify penefit lustry.	emplo of diver	yment sifying
HRS § 226-7: Objectives and policies for the economy – agriculture			
<b>Objectives:</b> Planning for the State's economy with regard to agriculture shall be directed tow the following objectives:	vards a	chievem	nent of
(1) Viability of Hawaii's sugar and pineapple industries.			Х
(2) Growth and development of diversified agriculture throughout the State.	Х		
(3) An agriculture industry that continues to constitute a dynamic and essential component of Hawaii's strategic, economic, and social well-being.	Х		
Policies:			
(1) Establish a clear direction for Hawaii's agriculture through stakeholder commitment and advocacy.	Х		
(2) Encourage agriculture by making best use of natural resources.	Х		
(3) Provide the governor and the legislature with information and options needed for prudent decision making for the development of agriculture.	Х		
(4) Establish strong relationships between the agricultural and visitor industries for mutual marketing benefits.	Х		
(5) Foster increased public awareness and understanding of the contributions and benefits of agriculture as a major sector of Hawaii's economy.			Х
(6) Seek the enactment and retention of federal and state legislation that benefits Hawaii's agricultural industries.			Х
<ul> <li>(7) Strengthen diversified agriculture by developing an effective promotion, marketing, and distribution system between Hawaii's food producers and consumers in the State, nation, and world.</li> </ul>			х
(8) Support research and development activities that strengthen economic productivity in agriculture, stimulate greater efficiency, and enhance the development of new products and agricultural by-products.			х
(9) Enhance agricultural growth by providing public incentives and encouraging private initiatives.			Х
(10) Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs	Х		
(11) Increase the attractiveness and opportunities for an agricultural education and livelihood.	х

HRS § 226-8: Objectives and policies for the economy – visitor industry			
<b>Objectives:</b> Planning for the State's economy with regard to the visitor industry shall be directed towards the achievement of the objective of a visitor industry that constitutes a major component of steady growth for Hawaii's economy.			
Policies:			
(1) Support and assist in the promotion of Hawaii's visitor attractions and facilities.			Х
(2) Ensure that visitor industry activities are in keeping with the social, economic, and physical needs and aspirations of Hawaii's people.			Х
(3) Improve the quality of existing visitor destination areas by utilizing Hawaii's strengths in science and technology			х

 (4) Encourage cooperation and coordination between the government and private sectors in developing and maintaining well-designed, adequately serviced visitor industry and related developments which are sensitive to neighboring communities and activities.
 X

 (5) Develop the industry in a manner that will continue to provide new job opportunities and steady employment for Hawaii's people.
 X

#### Final Environmental Assessment- Finding of No Significant Impact

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(6) Provide opportunities for Hawaii's people to obtain job training and education that will allow for upward mobility within the visitor industry.			Х
(7) Foster a recognition of the contribution of the visitor industry to Hawaii's economy and the need to perpetuate the aloha spirit.			Х
(8) Foster an understanding by visitors of the aloha spirit and of the unique and sensitive character of Hawaii's cultures and values.			Х

Discussion: Not applicable.

#### HRS § 226-9: Objective and policies for the economy – federal expenditures

**Objective:** Planning for the State's economy with regard to federal expenditures shall be directed towards achievement of the objective of a stable federal investment base as an integral component of Hawaii's economy.

Policies:	
(1) Encourage the sustained flow of federal expenditures in Hawai'i that generates long- term government civilian employment.	X
(2) Promote Hawaii's supportive role in national defense in a manner consistent with Hawaii's social, environmental, and cultural goals by building upon dual-use and defense applications to develop thriving ocean engineering, aerospace research and development, and related dual-use technology sectors in Hawaii's economy.	х
(3) Promote the development of federally supported activities in Hawai'i that respect state- wide economic concerns, are sensitive to community needs, and minimize adverse impacts on Hawaii's environment.	х
(4) Increase opportunities for entry and advancement of Hawaii's people into federal government service.	х
(5) Promote federal use of local commodities, services, and facilities available in Hawai'i.	Х
(6) Strengthen federal-state-county communication and coordination in all federal activities that affect Hawai'i.	Х
(7) Pursue the return of federally controlled lands in Hawai'i that are not required for either the defense of the nation or for other purposes of national importance, and promote the mutually beneficial exchanges of land between federal agencies, the State, and the counties.	х
Discussion: Not applicable.	

HRS § 226-10: Objectives and policies for the economy – potential growth activities.

**Objective:** Planning for the State's economy with regard to potential growth activities shall be directed towards achievement of the objective of development and expansion of potential growth activities that serve to increase and diversify Hawaii's economic base.

Final Environmental Assessment-	Finding of No Significant Impact
---------------------------------	----------------------------------

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
Policies:			
(1) Facilitate investment and employment growth in economic activities that have the potential to expand and diversify Hawaii's economy, including but not limited to diversified agriculture, aquaculture, renewable energy development, creative media, health care, and science and technology-based sectors.	х		
(2) Facilitate investment in innovative activity that may pose risks or be less labor-intensive than other traditional business activity, but if successful, will generate revenue in Hawai'i through the export of services or products or substitution of imported services or products.			х
(3) Encourage entrepreneurship in innovative activity by academic researchers and instructors who may not have the background, skill, or initial inclination to commercially exploit their discoveries or achievements.			х
(4) Recognize that innovative activity is not exclusively dependent upon individuals with advanced formal education, but that many self-taught, motivated individuals are able, willing, sufficiently knowledgeable, and equipped with the attitude necessary to undertake innovative activity.			х
(5) Increase the opportunities for investors in innovative activity and talent engaged in innovative activity to personally meet and interact at cultural, art, entertainment, culinary, athletic, or visitor-oriented events without a business focus.			х
(6) Expand Hawaii's capacity to attract and service international programs and activities that generate employment for Hawaii's people.			Х
<ul> <li>(7) Enhance and promote Hawaii's role as a center for international relations, trade, finance, services, technology, education, culture, and the arts.</li> </ul>			Х
(8) Accelerate research and development of new energy- related industries based on wind, solar, ocean, and underground resources and solid waste.			Х
(9) Promote Hawaii's geographic, environmental, social, and technological advantages to attract new or innovative economic activities into the State.			Х
(10) Provide public incentives and encourage private initiative to attract new industries that best support Hawaii's social, economic, physical, and environmental objectives.			Х
(11) Increase research and the development of ocean-related economic activities such as mining, food production, and scientific research.			Х
(12) Develop, promote, and support research and educational and training programs that will enhance Hawaii's ability to attract and develop economic activities of benefit to Hawai'i.			Х
(13) Foster a broader public recognition and understanding of the potential benefits of new or innovative arowth-oriented industry in Hawai'i.			Х
(14) Encourage the development and implementation of joint federal and state initiatives to attract federal programs and projects that will support Hawaii's social, economic, physical, and environmental objectives.			х
(15) Increase research and development of businesses and services in the telecommunications and information industries			х
(16) Foster the research and development of nonfossil fuel and energy efficient modes of			Х
(17) Recognize and promote health care and health care information technology as growth industries.			Х

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A		
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)					
<b>Discussion:</b> DHHL's primary intent is repurpose lands that have long been in pineapple cultivagricultural, residential, community, commercial, and industrial use, and to support those infrastructure.	vation t uses v	to subsis with ade	stence equate		
HRS § 226-10.5: Objectives and policies for the economy – information industry					
<b>Objective:</b> Planning for the State's economy with regard to telecommunications and informative directed toward recognizing that broadband and wireless communication capability and foundations for an innovative economy and positioning Hawai'i as a leader in broad communications and applications in the Pacific Region.	tion te nd infro dband	chnolog astructu and w	y shall re are ireless		
Policies:					
(1) Promote efforts to attain the highest speeds of electronic and wireless communication within Hawai'i and between Hawai'i and the world, and make high speed communication available to all residents and businesses in Hawaii;			х		
(2) Encourage the continued development and expansion of the telecommunications infrastructure serving Hawai'i to accommodate future growth and innovation in Hawaii's economy;			х		
(3) Facilitate the development of new or innovative business and service ventures in the information industry which will provide employment opportunities for the people of Hawaii;			х		
(4) Encourage mainland- and foreign-based companies of all sizes, whether information technology-focused or not, to allow their principals, employees, or contractors to live in and work from Hawai'i, using technology to communicate with their headquarters, offices, or customers located out-of-state;			х		
(5) Encourage greater cooperation between the public and private sectors in developing and maintaining a well- designed information industry;			Х		
(6) Ensure that the development of new businesses and services in the industry are in keeping with the social, economic, and physical needs and aspirations of Hawaii's people:			Х		
<ul> <li>(7) Provide opportunities for Hawaii's people to obtain job training and education that will allow for upward mobility within the information industry:</li> </ul>			Х		
<ul> <li>(8) Foster a recognition of the contribution of the information industry to Hawaii's economy; and</li> </ul>			Х		
<ul> <li>(9) Assist in the promotion of Hawai'i as a broker, creator, and processor of information in the Pacific.</li> </ul>			Х		
Discussion: Not applicable					
HRS § 226-11: Objectives and policies for the physical environment – land-based, shoreline, and marine resources.					
<b>Objectives:</b> Planning for the State's physical environment with regard to land-based, shoreline, and marine resources shall be directed towards achievement of the following objectives.					
(1) Prudent use of Hawaii's land-based, shoreline, and marine resources.	X				
(2) Effective protection of Hawaii's unique and fragile environmental resources.			Х		

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES	S	N/S	N/A
AND POLICIES			
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
Policies:			
(1) Exercise an overall conservation ethic in the use of Hawaii's natural resources.			Х
(2) Ensure compatibility between land-based and water-based activities and natural resources and ecological systems.	Х		
(3) Take into account the physical attributes of areas when planning and designing activities and facilities.	Х		
(4) Manage natural resources and environs to encourage their beneficial and multiple use without generating costly or irreparable environmental damage.	Х		
(5) Consider multiple uses in watershed areas, provided such uses do not detrimentally affect water quality and recharge functions.			Х
(6) Encourage the protection of rare or endangered plant and animal species and habitats native to Hawai'i.			Х
(7) Provide public incentives that encourage private actions to protect significant natural resources from degradation or unnecessary depletion.			Х
(8) Pursue compatible relationships among activities, facilities, and natural resources.			Х
(9) Promote increased accessibility and prudent use of inland and shoreline areas for public recreational, educational, and scientific purposes.			Х
<b>Discussion:</b> The Master Plan Area includes lands that were heavily utilized for pineapple cultivation. These land are neither unique nor fragile or contain rare or endangered plant and animal species and habitats native f Hawai'i. Moreover, the alternative of no action (leaving the lands in its mostly fallow state) would not represen prudent use of DHHL and Hawai'i 's land-based resources. Any potential impacts of runoff from the Master Pla Area during construction and operation will be mitigated by best management practices to reduce runoff to existin levels and minimizing opportunities for soil erosion. Site planning for the Master Plan Area has taken into accou any existing streams or areas of potential flooding, and to avoid development (including farming) in these areas.			
HRS § 226-12: Objectives and policies for the physical environment – scenic, natural l resources.	peauty	, and h	istoric
<b>Objective:</b> Planning for the State's physical environment shall be directed towards achieveme enhancement of Hawaii's scenic assets, natural beauty, and multi-cultural/historical resources	nt of tl s.	he objec	tive of
Policies:			
(1) Promote the preservation and restoration of significant natural and historic resources.	Х		
(2) Provide incentives to maintain and enhance historic, cultural, and scenic amenities.			Х
(3) Promote the preservation of views and vistas to enhance the visual and aesthetic enjoyment of mountains, ocean, scenic landscapes, and other natural features.	Х		
(4) Protect those special areas, structures, and elements that are an integral and functional part of Hawaii's ethnic and cultural heritage.	Х		
<ul> <li>(5) Encourage the design of developments and activities that complement the natural beauty of the islands.</li> </ul>	Х		
	I		

#### Final Environmental Assessment- Finding of No Significant Impact

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			

**Discussion:** ASM Affiliates, Inc. is assisting DHHL in initiating an HRS Chapter 6E consultation for the Master Plan Area. SHPD will be consulted regarding the archaeological reconnaissance survey for the Master Plan Area, prior to DHHL, its beneficiaries or other lessees apply for any permits for that property. The proposed diversified agricultural use of the Master Plan Area is consistent with its prior use for pineapple cultivation.

The Master Plan will not adversely impact any scenic resources. DHHL respects scenic resources identified in the County's Maui Island Plan, and will be generally consistent with its policies regarding Honoapi'ilani Highway, which is categorized as a "medium" level scenic corridor in the vicinity of the Master Plan Area. For example, appropriate building setbacks will be utilized, and wall heights are anticipated to be limited along the highway. Development of the Master Plan Area will change the visual character of the property from vacant lands to that of a rural community, primarily agricultural, with a mixture of land uses. See Section 4.5.

#### HRS § 226-13: Objectives and policies for the physical environment – land, air, and water quality.

**Objectives:** Planning for the State's physical environment with regard to land, air, and water quality shall be directed towards achievement of the following objectives:

(1)	Maintenance and pursuit of improved quality in Hawaii's land, air, and water resources.	Х	
(2)	Greater public awareness and appreciation of Hawaii's environmental resources.		Х
Poli	icies:		I
(1)	Foster educational activities that promote a better understanding of Hawaii's limited environmental resources.		Х
(2)	Promote the proper management of Hawaii's land and water resources.	х	
(3)	Promote effective measures to achieve desired quality in Hawaii's surface, ground, and coastal waters.	х	
(4)	Encourage actions to maintain or improve aural and air quality levels to enhance the health and well-being of Hawaii's people.	х	
(5)	Reduce the threat to life and property from erosion, flooding, tsunamis, hurricanes, earthquakes, volcanic eruptions, and other natural or man-induced hazards and disasters.	х	
(6)	Encourage design and construction practices that enhance the physical qualities of Hawaii's communities.	х	
(7)	Encourage urban developments in close proximity to existing services and facilities.	x	
(8)	Foster recognition of the importance and value of the land, air, and water resources to Hawaii's people, their cultures and visitors.		Х

**Discussion:** Any potential impacts of runoff from implementation of the Master Plan during construction and operation will be mitigated by best management practices to reduce runoff to existing levels and minimizing opportunities for soil erosion. Site planning for the Master Plan Area has taken into account any existing streams or areas of potential flooding, and to avoid development (including farming) in these areas.

The operation of the Master Plan will comply with current aural and air quality public health standards.

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A	
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)				
As noted in Section 3.5.1, flood hazards are primarily identified by the Flood Insurance Rate Map (FIRM) prepared by the Federal Emergency Management Agency (FEMA), National Flood Insurance Program. According to the FIRM, most of the Master Plan Area is designated Zone X, which denotes "areas of minimal flood hazard" See Figure 12. Otherwise, the Master Plan Area is not subject to hazards from erosion, flooding, tsunamis, hurricanes, earthquakes volcanic eruptions and other natural or man-induced hazards and disasters				
HRS § 226-14: Objective and policies for facility systems – in general				
<b>Objective:</b> Planning for the State's facility systems in general shall be directed towards achieve of water, transportation, waste disposal, and energy and telecommunication systems that suppression economic, and physical objectives.	ment o <u></u> oort sto	f the obj itewide	iective social,	
Policies:				
(1) Accommodate the needs of Hawaii's people through coordination of facility systems and capital improvement priorities in consonance with state and county plans.			х	
(2) Encourage flexibility in the design and development of facility systems to promote prudent use of resources and accommodate changing public demands and priorities.			Х	
(3) Ensure that required facility systems can be supported within resource capacities and at reasonable cost to the user.			Х	
(4) Pursue alternative methods of financing programs and projects and cost-saving techniques in the planning, construction, and maintenance of facility systems.			Х	
Discussion: Not applicable.				
HRS § 226-15: Objectives and policies for facility systems – solid and liquid wastes.				
<b>Objectives:</b> Planning for the State's facility systems with regard to solid and liquid wastes shall the achievement of the following objectives:	l be dire	ected to	wards	
(1) Maintenance of basic public health and sanitation standards relating to treatment and disposal of solid and liquid wastes.	Х			
(2) Provision of adequate sewerage facilities for physical and economic activities that alleviate problems in housing, employment, mobility, and other areas.	х			
Policies:				
(1) Encourage the adequate development of sewerage facilities that complement planned growth.	х			
(2) Promote re-use and recycling to reduce solid and liquid wastes and employ a conservation ethic.	х			
(3) Promote research to develop more efficient and economical treatment and disposal of solid and liquid wastes.			Х	
<b>Discussion:</b> DHHL's primary intent is repurpose lands that have long been in pineapple cultivation to subsistence agricultural, residential, community, commercial, and industrial use, and to support those uses with adequate infrastructure, including sanitary wastewater treatment and disposal.				

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A	
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)				
HRS § 226-16: Objectives and policies for facility systems – water.				
<b>Objective:</b> Planning for the State's facility systems with regard to water shall be directed towards achievement of the objective of the provision of water to adequately accommodate domestic, agricultural, commercial, industrial, recreational, and other needs within resource capacities.				
Policies:				
(1) Coordinate development of land use activities with existing and potential water supply.	Х			
(2) Support research and development of alternative methods to meet future water requirements well in advance of anticipated needs.			Х	
(3) Reclaim and encourage the productive use of runoff water and wastewater discharges.	Х			
(4) Assist in improving the quality, efficiency, service, and storage capabilities of water systems for domestic and agricultural use.	Х			
(5) Support water supply services to areas experiencing critical water problems.			Х	
(6) Promote water conservation programs and practices in government, private industry, and the general public to help ensure adequate water to meet long-term needs.	х			
<b>Discussion:</b> DHHL's primary intent is to repurpose lands that were used for pineapple cultive agricultural, residential, community, commercial, and industrial use, and to support those infrastructure, including both irrigation and drinking water.	ation t uses v	to subsis vith ade	stence quate	
HRS § 226-17: Objectives and policies for facility systems – transportation.				
<b>Objective:</b> Planning for the State's facility systems with regard to transportation shall be a achievement of the following objectives:	directe	ed towa	rd the	
(1) An integrated multi-modal transportation system that services statewide needs and promotes the efficient, economical, safe, and convenient movement of people and goods.			х	
(2) A statewide transportation system that is consistent with and will accommodate planned growth objectives throughout the State.			Х	
Policies:				
(1) Design, program, and develop a multi-modal system in conformance with desired growth and physical development as stated in this chapter;			Х	
(2) Coordinate state, county, federal, and private transportation activities and programs toward the achievement of statewide objectives;			Х	
(3) Encourage a reasonable distribution of financial responsibilities for transportation among participating governmental and private parties:			Х	
(4) Provide for improved accessibility to shipping, docking, and storage facilities;			Х	
<ul> <li>(5) Promote a reasonable level and variety of mass transportation services that adequately meet statewide and community needs;</li> </ul>			Х	
(6) Encourage transportation systems that serve to accommodate present and future development needs of communities;			Х	

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES	S	N/S	N/A
AND POLICIES			
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(7) Encourage a variety of carriers to offer increased opportunities and advantages to interisland movement of people and goods;			х
(8) Increase the capacities of airport and harbor systems and support facilities to effectively accommodate transshipment and storage needs;			Х
(9) Encourage the development of transportation systems and programs which would assist statewide economic growth and diversification;			Х
(10) Encourage the design and development of transportation systems sensitive to the needs of affected communities and the quality of Hawaii's natural environment;			Х
(11) Encourage safe and convenient use of low-cost, energy-efficient, non-polluting means of transportation;			Х
(12) Coordinate intergovernmental land use and transportation planning activities to ensure the timely delivery of supporting transportation infrastructure in order to accommodate planned growth objectives; and			х
(13) Encourage diversification of transportation modes and infrastructure to promote alternate fuels and energy efficiency.			Х
Discussion: While these objectives and policies would be better addressed by the S	tate D	epartme	ent of
Transportation, DHHL would be supportive of accommodations for bus stops for the County's system (Maui Bus)	public	transpoi	rtation
system (madi bus).			
HRS § 226-18: Objectives and policies for facility systems – energy.			
Objectives: Planning for the State's facility systems with regard to energy shall be directed tow	vard th	e achiev	ement
of the following objectives, giving due consideration to all:			
(1) Dependable, efficient, and economical statewide energy systems capable of supporting the needs of the people;	х		
(2) Increased energy security and self-sufficiency through the reduction and ultimate elimination of Hawaii's dependence on imported fuels for electrical generation and ground transportation;	х		
(3) Greater diversification of energy generation in the face of threats to Hawaii's energy supplies and systems;	Х		
<ul> <li>(4) Reduction, avoidance, or sequestration of greenhouse gas emissions from energy supply and use: and</li> </ul>	х		
(5) Utility models that make the social and financial interests of Hawaii's utility customers a priority.	х		
<b>Policies:</b> To achieve the energy objectives, it shall be the policy of this State to ensure the	short-	and long	g-term
provision of adequate, reasonably priced, and dependable energy services to accommodate achieve the energy objectives, it shall be the policy of this State to:	dema	nd. To f	further
(1) Support research and development as well as promote the use of renewable energy sources;	х		
(2) Ensure that the combination of energy supplies and energy-saving systems is sufficient to support the demands of growth;	х		
(3) Base decisions of least-cost supply-side and demand-side energy resource options on a comparison of their total costs and benefits when a least-cost is determined by a	x		
reasonably comprehensive, quantitative, and qualitative accounting of their long-term, direct and indirect economic, environmental, social, cultural, and public health costs and benefits;			

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(4) Promote all cost-effective conservation of power and fuel supplies through measures including:			
(A) Development of cost-effective demand-side management programs;	Х		
(B) Education; and	Х		
(C) Adoption of energy-efficient practices and technologies;	Х		
(D) Increasing energy efficiency and decreasing energy use in public infrastructure;	Х		
(5) Ensure to the extent that new supply-side resources are needed, the development or expansion of energy systems utilizes the least-cost energy supply option and maximizes efficient technologies;	х		
(6) Support research, development, demonstration, and use of energy efficiency, load management, and other demand-side management programs, practices, and technologies;	х		
(7) Promote alternate fuels and energy efficiency;	Х		
(8) Support actions that reduce, avoid, or sequester greenhouse gases in utility, transportation, and industrial sector applications;	Х		
(9) Support actions that reduce, avoid, or sequester Hawaii's greenhouse gas emissions through agriculture and forestry initiatives.	х		
(10) Provide priority handling and processing for all state and county permits required for renewable energy projects;			Х
(11) Ensure that liquefied natural gas is used only as a cost-effective transitional, limited-term replacement of petroleum for electricity generation and does not impede the development and use of other cost-effective renewable energy sources; and			х
(12) Promote the development of indigenous geothermal energy resources that are located on public trust land as an affordable and reliable source of firm power for Hawai'i.			Х
<b>Discussion:</b> DHHL has developed and is implementing its own renewab ( <u>https://dhhl.Hawai'i.gov/wp-content/uploads/2011/09/DHHL-Energy-Policy.pdf</u> ) that is co 226-18.	le e nsister	nergy it with	policy HRS §
nno y 220-10.5. Objectives and policies for facility systems—telecommunications.			

Final Environmental Assessment- Finding of No Significant Impact

**Objective:** Planning for the State's telecommunications facility systems shall be directed towards the achievement of dependable, efficient, and economical statewide telecommunications systems capable of supporting the needs of the people.

**Policies:** To achieve the telecommunications objective, it shall be the policy of this State to ensure the provision of adequate, reasonably priced, and dependable telecommunications services to accommodate demand. To further achieve the telecommunications objective, it shall be the policy of this State to:

(1)	Facilitate research and development of telecommunications systems and resources;	Х	
(2)	Encourage public and private sector efforts to develop means for adequate, ongoing telecommunications planning;	х	
(3)	Promote efficient management and use of existing telecommunications systems and services; and	Х	

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(4) Facilitate the development of education and training of telecommunications personnel.			Х
Discussion: As an agency serving native Hawaiians, DHHL took early steps to ensure that its beneficiaries had e access to the internet and other telecommunications by partnering with Sandwich Isles Communications (SIC) was granted an exclusive license in 1995 to provide telecommunications services on more than 200,000 acre Hawaiian Home Lands, and spent years building a fiber network to serve businesses and homes on Hawaiian Hous Lands.			
HRS § 226-19: Objectives and policies for socio-cultural advancement – housing.			
<b>Objectives:</b> Planning for the State's socio-cultural advancement with regard to housing shall be achievement of the following objectives:	e direc	ted towo	ard the
(1) Greater opportunities for Hawaii's people to secure reasonably priced, safe, sanitary, and livable homes, located in suitable environments that satisfactorily accommodate the needs and desires of families and individuals, through collaboration and cooperation between government and nonprofit and for-profit developers to ensure that more affordable housing is made available to very low-, low- and moderate-income segments of Hawaii's population.			x
(2) The orderly development of residential areas sensitive to community needs and other land uses.			Х
(3) The development and provision of affordable rental housing by the State to meet the housing needs of Hawaii's people.			Х
Policies:			
(1) Effectively accommodate the housing needs of Hawaii's people.			Х
(2) Stimulate and promote feasible approaches that increase affordable rental and for sale housing choices for extremely low-, very low-, lower-, moderate-, and above moderate-income households.			х
(3) Increase homeownership and rental opportunities and choices in terms of quality, location, cost, densities, style, and size of housing.			Х
(4) Promote appropriate improvement, rehabilitation, and maintenance of existing rental and for sale housing units and residential areas.			Х
<ul> <li>(5) Promote design and location of housing developments taking into account the physical setting, accessibility to public facilities and services, and other concerns of existing communities and surrounding areas.</li> </ul>			x
(6) Facilitate the use of available vacant, developable, and underutilized urban lands for housing.			Х
(7) Foster a variety of lifestyles traditional to Hawai'i through the design and maintenance of neighborhoods that reflect the culture and values of the community.			х
(8) Promote research and development of methods to reduce the cost of housing construction in Hawai'i			Х

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<b>Discussion:</b> Although, not directly applicable to this objective, it is DHHL's mission "to manage the Hawaiian Hom Lands trust effectively and to develop and deliver lands to native Hawaiians. We will partner with others toward developing self-sufficient and healthy communities." In its most recent planning efforts for the Master Plan Are DHHL, with the input of its beneficiaries, have produced three alternatives for development. All three alternative include some component of residential units, from 580 to 1,181 units.			
HRS § 220-20: Objectives and policies for socio-cultural advancement – nealth			
<b>Objectives:</b> Planning for the State's socio-cultural advancement with regard to health shall achievement of the following objectives:	be dire	ected to	wards
(1) Fulfillment of basic individual health needs of the general public.			Х
(2) Maintenance of sanitary and environmentally healthful conditions in Hawaii's communities.	х		
(3) Elimination of health disparities by identifying and addressing social determinants of health.			Х
Policies:			
(1) Provide adequate and accessible services and facilities for prevention and treatment of physical and mental health problems, including substance abuse.			Х
(2) Encourage improved cooperation among public and private sectors in the provision of health care to accommodate the total health needs of individuals throughout the State.			Х
(3) Encourage public and private efforts to develop and promote statewide and local strategies to reduce health care and related insurance costs.			Х
(4) Foster an awareness of the need for personal health maintenance and preventive health care through education and other measures.			Х
(5) Provide programs, services, and activities that ensure environmentally healthful and sanitary conditions.			Х
(6) Improve the State's capabilities in preventing contamination by pesticides and other potentially hazardous substances through increased coordination, education, monitoring, and enforcement.			х
(7) Prioritize programs, services, interventions, and activities that address identified social determinants of health to improve native Hawaiian health and well-being consistent with the United States Congress' declaration of policy as codified in title 42 United States Code section 11702, and to reduce health disparities of disproportionately affected demographics, including native Hawaiians, other Pacific Islanders, and Filipinos. The prioritization of affected demographic groups other than native Hawaiians may be reviewed every ten years and revised based on the best available epidemiological and public health data.			х
<b>Discussion:</b> While most of the above objectives and policies are not directly applicable to the indirectly, the diversified agricultural (particularly fresh food) components of the Master positive impact on both native Hawaiian and other populations' health. In addition, DHH University of Hawai'i College of Tropical Agriculture and Human Resources (CTAHR) to protechnical assistance programs to Hawaiian Home Lands agricultural and pastoral homester agricultural diagnostic services, disease control and pesticide the https://www.ctahr.Hawai'i.edu/site/ExtHHL.aspx. 	and groups to deal effectively with social problems and to enhance their participation in society.			
(3)	Facilitate the adjustment of new residents, especially recently arrived immigrants, into Hawaii's communities.			Х
(4)	Promote alternatives to institutional care in the provision of long-term care for elder and disabled populations.			Х
(5)	Support public and private efforts to prevent domestic abuse and child molestation, and assist victims of abuse and neglect.			Х
(6)	Promote programs which assist people in need of family planning services to enable them to meet their needs.			Х

Final Environmental Assessment- Finding of No Significant Impact

**Discussion:** The HALE Program, established in 2014 by DHHL, aids beneficiaries with financial literacy services. HALE supports the department's primary mission of placing beneficiaries into homes within Hawaiian Homestead communities throughout the State of Hawai'i. Currently HALE offers two types of services for beneficiaries. They include Homebuyer Education classes and Foreclosure Prevention Management. HALE services also support beneficiaries in times of need. DHHL acknowledges that beneficiaries may encounter life events that may negatively affect their financial situation such as unemployment, increased expenses due to the loss of a household member, an unexpected medical situation and other events.

#### HRS § 226-23: Objectives and policies for socio-cultural advancement – leisure.

**Objective:** Planning for the State's socio-cultural advancement with regard to leisure shall be directed towards the achievement of the objective of the adequate provision of resources to accommodate diverse cultural, artistic, and recreational needs for present and future generations.

Policies:	
(1) Foster and preserve Hawaii's multi-cultural heritage through supportive cultural, artistic, recreational, and humanities-oriented programs and activities.	Х
(2) Provide a wide range of activities and facilities to fulfill the cultural, artistic, and recreational needs of all diverse and special groups effectively and efficiently.	Х
(3) Enhance the enjoyment of recreational experiences through safety and security measures, educational opportunities, and improved facility design and maintenance.	х
(4) Promote the recreational and educational potential of natural resources having scenic, open space, cultural, historical, geological, or biological values while ensuring that their inherent values are preserved.	х
(5) Ensure opportunities for everyone to use and enjoy Hawaii's recreational resources.	х
(6) Assure the availability of sufficient resources to provide for future cultural, artistic, and recreational needs.	Х
(7) Provide adequate and accessible physical fitness programs to promote the physical and mental well-being of Hawaii's people.	Х
(8) Increase opportunities for appreciation and participation in the creative arts, including the literary, theatrical, visual, musical, folk, and traditional art forms.	х
(9) Encourage the development of creative expression in the artistic disciplines to enable all segments of Hawaii's population to participate in the creative arts.	х
(10) Assure adequate access to significant natural and cultural resources in public ownership.	X

#### Final Environmental Assessment- Finding of No Significant Impact

#### PART III. PRIORITY GUIDELINES

The purpose of this part of the Hawai'i State Plan is to establish overall priority guidelines to address areas of statewide concern. The Hawai'i State Plan notes that the State shall strive to improve the quality of life for Hawai'i's present and future population through the pursuit of desirable courses of action in five major areas of statewide concern which merit priority attention: 1) economic development; 2) population growth and land resource management; 3) affordable housing; 4) crime and criminal justice; and 5) quality education (§226-102). The priority guidelines applicable to The Master Plan Area are discussed below.

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)

(a) Priority guidelines to stimulate economic growth and encourage business expansion a provide needed jobs for Hawaii's people and achieve a stable and diversified economy:	nd dev	velopm	ent to
(1) Seek a variety of means to increase the availability of investment capital for new and expanding enterprises.			Х
(A) Encourage investments which:			

Hawaiʻi STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(i) Reflect long term commitments to the State;			Х
(ii) Rely on economic linkages within the local economy;			Х
(iii) Diversify the economy;			Х
(iv) Reinvest in the local economy;			Х
(v) Are sensitive to community needs and priorities; and			Х
(vi) Demonstrate a commitment to provide management opportunities to Hawai'i residents.			Х
(B) Encourage investments in innovative activities that have a nexus to the State, such as:			Х
(i) Present or former residents acting as entrepreneurs or principals;			Х
(ii) Academic support from an institution of higher education in Hawaii;			Х
(iii) Investment interest from Hawai'i residents;			Х
(iv) Resources unique to Hawai'i that are required for innovative activity; and			Х
(v) Complementary or supportive industries or government programs or projects.			Х
(2) Encourage the expansion of technological research to assist industry development and support the development and commercialization of technological advancements			Х
<ul> <li>(3) Improve the quality, accessibility, and range of services provided by government to business, including data and reference services and assistance in complying with</li> </ul>			х
governmental regulations.			
(4) Seek to ensure that state business tax and labor laws and administrative policies are equitable, rational, and predictable.			Х
(5) Streamline the processes for building and development permit and review and telecommunication infrastructure installation approval and eliminate or consolidate other burdensome or duplicative governmental requirements imposed on business, where scientific evidence indicates that public health, safety, and welfare would not be adversely affected.			х
(6) Encourage the formation of cooperatives and other favorable marketing or distribution arrangements at the regional or local level to assist Hawaii's small-scale producers, manufacturers, and distributors.			Х
(7) Continue to seek legislation to protect Hawai'i from transportation interruptions between Hawai'i and the continental United States.			Х
(8) Provide public incentives and encourage private initiative to develop and attract industries which promise long-term growth potentials and which have the following characteristics:			Х
(A) An industry that can take advantage of Hawaii's unique location and available physical and human resources.			Х
(B) A clean industry that would have minimal adverse effects on Hawaii's environment.			Х
(C) An industry that is willing to hire and train Hawaii's people to meet the industry's labor needs at all levels of employment.			Х

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(D) An industry that would provide reasonable income and steady employment.			Х
(9) Support and encourage, through educational and technical assistance programs and			
other means, expanded opportunities for employee ownership and participation in			х
Hawaiʻi business.			
(10) Enhance the quality of Hawaii's labor force and develop and maintain career opportunities for Hawaii's people through the following actions:			Х
(A) Expand vocational training in diversified agriculture, aquaculture, information industry, and other areas where growth is desired and feasible.			х
(B) Encourage more effective career counseling and guidance in high schools and post- secondary institutions to inform students of present and future career opportunities.			Х
(C) Allocate educational resources to career areas where high employment is expected and where arowth of new industries is desired.			Х
(D) Promote career opportunities in all industries for Hawaii's people by encouraging firms doing business in the State to hire residents			Х
(E) Promote areater public and private sector cooperation in determining industrial			
training needs and in developing relevant curricula and on- the-job training opportunities.			Х
(F) Provide retraining programs and other support services to assist entry of displaced			x
workers into alternative employment.			~
(b) Priority guidelines to promote the economic health and quality of the visitor industry:			
(1) Promote visitor satisfaction by fostering an environment which enhances the Aloha Spirit and minimizes inconveniences to Hawaii's residents and visitors.			Х
(2) Encourage the development and maintenance of well-designed, adequately serviced hotels and resort destination areas which are sensitive to neighboring communities and			х
activities and which provide for adequate shoreline setbacks and beach access.			
(3) Support appropriate capital improvements to enhance the quality of existing resort			v
destination areas and provide incentives to encourage investment in upgrading, repair,			X
and maintenance of visitor facilities.			
(4) Encourage visitor industry practices and activities which respect, preserve, and enhance			Х
Hawaii's significant natural, scenic, historic, and cultural resources.			
(5) Develop and maintain career opportunities in the visitor industry for Hawaii's people, with emphasis on managerial positions.			х
(6) Support and coordinate tourism promotion abroad to enhance Hawaii's share of existing			Х
and potential visitor markets.			
(7) Maintain and encourage a more favorable resort investment climate consistent with the objectives of this chapter.			х
(8) Support law enforcement activities that provide a safer environment for both visitors and residents alike.			Х
(9) Coordinate visitor industry activities and promotions to business visitors through the state			Х
network of advanced data communication techniques.			
(c) Priority guidelines to promote the continued viability of the sugar and pineapple industries	:		
(1) Provide adequate agricultural lands to support the economic viability of the sugar and			Х
pineapple industries.			
(2) Continue efforts to maintain federal support to provide stable sugar prices high enough to allow profitable operations in Hawai'i.			х
(3) Support research and development, as appropriate. to improve the quality and production			x
of sugar and pineapple crops.			~

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(d) Priority guidelines to promote the growth and development of diversified agriculture and a	aquacu	lture:	
(1) Identify, conserve, and protect agricultural and aquacultural lands of importance and initiate affirmative and comprehensive programs to promote economically productive agricultural and aquacultural uses of such lands.			х
(2) Assist in providing adequate, reasonably priced water for agricultural activities.			х
(3) Encourage public and private investment to increase water supply and to improve transmission, storage, and irrigation facilities in support of diversified agriculture and aquaculture.			х
(4) Assist in the formation and operation of production and marketing associations and cooperatives to reduce production and marketing costs.			х
(5) Encourage and assist with the development of a waterborne and airborne freight and cargo system capable of meeting the needs of Hawaii's agricultural community.			х
(6) Seek favorable freight rates for Hawaii's agricultural products from interisland and overseas transportation operators.			х
(7) Encourage the development and expansion of agricultural and aquacultural activities which offer long-term economic growth potential and employment opportunities.	Х		
(8) Continue the development of agricultural parks and other programs to assist small independent farmers in securing agricultural lands and loans.			Х
(9) Require agricultural uses in agricultural subdivisions and closely monitor the uses in these subdivisions.			Х
(10) Support the continuation of land currently in use for diversified agriculture.	Х		
(11) Encourage residents and visitors to support Hawaii's farmers by purchasing locally grown food and food products.			х
(e) Priority auidelines for water use and development:	1		
(1) Maintain and improve water conservation programs to reduce the overall water consumption rate			Х
<ul> <li>(2) Encourage the improvement of irrigation technology and promote the use of nonpotable water for agricultural and landscaping purposes.</li> </ul>	x		
(3) Increase the support for research and development of economically feasible alternative water sources.			Х
(4) Explore alternative funding sources and approaches to support future water development programs and water system improvements.			Х
(f) Priority guidelines for energy use and development:	•		
(1) Encourage the development, demonstration, and commercialization of renewable energy sources.			Х
(2) Initiate, maintain, and improve energy conservation programs aimed at reducing energy waste and increasing public awareness of the need to conserve energy.			Х
(3) Provide incentives to encourage the use of energy conserving technology in residential, industrial, and other buildings.			Х
(4) Encourage the development and use of energy conserving and cost-efficient transportation systems.			Х
(a) Priority auidelines to promote the development of the information industry			
<ul> <li>(1) Establish an information network, with an emphasis on broadband and wireless infrastructure and capability, that will serve as the foundation of and catalyst for overall economic growth and diversification in Hawai'i.</li> </ul>	х		

Final Environmental Assessment-	Finding of No Significant Impa	ct
---------------------------------	--------------------------------	----

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(2) Encourage the development of services such as financial data processing, a products and services exchange, foreign language translations, telemarketing, teleconferencing, a twenty-four-hour international stock exchange, international banking, and a Pacific Rim management center.			х
(3) Encourage the development of small businesses in the information field such as software development, the development of new information systems and peripherals, data conversion and data entry services, and home or cottage services such as computer programming, secretarial, and accounting services.			х
(4) Encourage the development or expansion of educational and training opportunities for residents in the information and telecommunications fields.			Х
(5) Encourage research activities, including legal research in the information and telecommunications fields.			Х
(6) Support promotional activities to market Hawaii's information industry services.			Х
(7) Encourage the location or co-location of telecommunication or wireless information relay facilities in the community, including public areas, where scientific evidence indicates that the public health, safety, and welfare would not be adversely affected.			х
Discussion: Commercial/Industrial Uses – Commercial/industrial use is anticipated to occupy u	ip to 41	Lacres	within

the Master Plan Area. DHHL proposes to provide Community Use – Commercial areas in the Master Plan devoted to use by smaller businesses including those of DHHL beneficiaries, to support beneficiary economic development initiatives. Activities in this area will build capacity in the small business community by providing a space for individual businesses or beneficiary individuals or organizations to produce and sell products and services in a highly-visible and central location off Honoapi'ilani Highway.

To ensure the wise use of limited resources, both water and energy conservation practices will be implemented. As an agency serving native Hawaiians, DHHL took early steps to ensure that its beneficiaries had equal access to the internet and other telecommunications by partnering with Sandwich Isles Communications (SIC). SIC was granted an exclusive license in 1995 to provide telecommunications services on more than 200,000 acres of Hawaiian Home Lands, and spent years building a fiber network to serve businesses and homes on Hawaiian Home Lands.

#### HRS § 226-104: Population growth and land resources priority guidelines.

(a)	Priority guidelines to effect desired statewide growth and distribution:		
(1)	Encourage planning and resource management to insure that population growth rates		V
	throughout the State are consistent with available and planned resource capacities and		х
	reflect the needs and desires of Hawaii's people.		
(2)	Manage a growth rate for Hawaii's economy that will parallel future employment needs		х
	for Hawaii's people.		
(3)	Ensure that adequate support services and facilities are provided to accommodate the	Х	
	desired distribution of future growth throughout the State.		
(4)	Encourage major state and federal investments and services to promote economic	Х	
	development and private investment to the neighbor islands, as appropriate.		
(5)	Explore the possibility of making available urban land, low-interest loans, and housing		
	subsidies to encourage the provision of housing to support selective economic and		х
	population growth on the neighbor islands.		
(6)	Seek federal funds and other funding sources outside the State for research, program		X
	development, and training to provide future employment opportunities on the neighbor		х
	islands.		

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(7) Support the development of high technology parks on the neighbor islands.			Х
(b) Priority guidelines for regional growth distribution and land resource utilization:			
(1) Encourage urban growth primarily to existing urban areas where adequate public facilities			
are already available or can be provided with reasonable public expenditures, and away from areas where other important benefits are present, such as protection of important agricultural land or preservation of lifestyles.			х
(2) Make available marginal or nonessential agricultural lands for appropriate urban uses while maintaining agricultural lands of importance in the agricultural district.			Х
(3) Restrict development when drafting of water would result in exceeding the sustainable yield or in significantly diminishing the recharge capacity of any groundwater area.			Х
(4) Encourage restriction of new urban development in areas where water is insufficient from any source for both agricultural and domestic use.			Х
(5) In order to preserve green belts, give priority to state capital-improvement funds which encourage location of urban development within existing urban areas except where compelling public interest dictates development of a noncontiguous new urban core.			х
(6) Seek participation from the private sector for the cost of building infrastructure and utilities, and maintaining open spaces.			Х
(7) Pursue rehabilitation of appropriate urban areas.			Х
(8) Support the redevelopment of Kakaako into a viable residential, industrial, and commercial community.			Х
(9) Direct future urban development away from critical environmental areas or impose mitigating measures so that negative impacts on the environment would be minimized.	Х		
(10) Identify critical environmental areas in Hawai'i to include but not be limited to the following: watershed and recharge areas; wildlife habitats (on land and in the ocean); areas with endangered species of plants and wildlife; natural streams and water bodies; scenic and recreational shoreline resources; open space and natural areas; historic and cultural sites; areas particularly sensitive to reduction in water and air quality; and scenic resources.			x
(11) Identify all areas where priority should be given to preserving rural character and lifestyle.			Х
(12) Utilize Hawaii's limited land resources wisely, providing adequate land to accommodate projected population and economic growth needs while ensuring the protection of the environment and the availability of the shoreline, conservation lands, and other limited resources for future generations.	х		
(13) Protect and enhance Hawaii's shoreline, open spaces, and scenic resources.			Х
<b>Discussion:</b> The Master Plan will facilitate employment and livelihood opportunities in We Master Plan involves the intensification of land uses within the Master Plan Area, it is not de Agricultural Land, a critical environmental area, shoreline, conservation lands or other limited	st Mau signate resoure	ui. HRS § 226-105: Crime and criminal justice.			
Priority guidelines in the area of crime and criminal justice:			

### Final Environmental Assessment- Finding of No Significant Impact

(1) Support law enforcement activities and other criminal justice efforts that are directed to provide a safer environment.

|--|

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(2) Target state and local resources on efforts to reduce the incidence of violent crime and on programs relating to the apprehension and prosecution of repeat offenders.			Х
(3) Support community and neighborhood program initiatives that enable residents to assist law enforcement agencies in preventing criminal activities.			Х
(4) Reduce overcrowding or substandard conditions in correctional facilities through a comprehensive approach among all criminal justice agencies which may include sentencing law revisions and use of alternative sanctions other than incarceration for persons who pose no danger to their community.			х
(5) Provide a range of appropriate sanctions for juvenile offenders, including community- based programs and other alternative sanctions.			Х
(6) Increase public and private efforts to assist witnesses and victims of crimes and to minimize the costs of victimization.			Х
Discussion: Not applicable.			
HRS § 226-106: Affordable housing.			
Priority guidelines for the provision of affordable housing:			
(1) Seek to use marginal or nonessential agricultural land, urban land, and public land to meet housing needs of extremely low-, very low-, lower-, moderate-, and above moderate-income households.			х
(2) Encourage the use of alternative construction and development methods as a means of reducing production costs.			Х
(3) Improve information and analysis relative to land availability and suitability for housing.			Х
(4) Create incentives for development which would increase home ownership and rental opportunities for Hawaii's extremely low-, very low-, lower-, and moderate-income households and residents with special needs.			х
(5) Encourage continued support for government or private housing programs that provide low interest mortgages to Hawaii's people for the purchase of initial owner- occupied housing.			х
(6) Encourage public and private sector cooperation in the development of rental housing alternatives.			Х
(7) Encourage improved coordination between various agencies and levels of government to deal with housing policies and regulations.			Х
(8) Give higher priority to the provision of quality housing that is affordable for Hawaii's residents and less priority to development of housing intended primarily for individuals outside of Hawai'i.			х
<b>Discussion: Discussion:</b> Although, not directly applicable to this objective, it is DHHL's missi Hawaiian Home Lands trust effectively and to develop and deliver lands to native Hawaiians. No others towards developing self-sufficient and healthy communities." In its most recent plan Master Plan Area, DHHL, with the input of its beneficiaries, have produced three alternatives f three alternatives include some component of residential units (including "Subsistence Agricu "Residential Homesteads: Single-Family", "Residential Homesteads: Multi-Family"), from 580 t	ion "to Ne will ning e or deve Itural F co 1,18	mana partne fforts f elopme lomest 1 units.	ge the r with or the ent. ### HRS § 226-107: Quality education.

Priority guidelines to promote quality education:

Hawai'i STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
(1) Pursue effective programs which reflect the varied district, school, and student needs to strengthen basic skills achievement;			Х
(2) Continue emphasis on general education "core" requirements to provide common background to students and essential support to other university programs;			Х
(3) Initiate efforts to improve the quality of education by improving the capabilities of the education work force;			Х
<ul> <li>(4) Promote increased opportunities for greater autonomy and flexibility of educational institutions in their decision-making responsibilities;</li> </ul>			Х
(5) Increase and improve the use of information technology in education by the availability of telecommunications equipment for:			
• The electronic exchange of information;			х
Statewide electronic mail; and			Х
Access to the Internet.			х
Encourage programs that increase the public's awareness and understanding of the impact of information technologies on our lives;			Х
(6) Pursue the establishment of Hawaii's public and private universities and colleges as research and training centers of the Pacific;			Х
(7) Develop resources and programs for early childhood education;			Х
(8) Explore alternatives for funding and delivery of educational services to improve the overall quality of education; and			Х
(9) Strengthen and expand educational programs and services for students with special needs.			Х
<b>Discussion: Discussion:</b> Although not directly applicable, it is possible the proposed Commu include a site for Hawaiian language-immersion charter school.	nity U	se area	s may
HRS § 226-108: Sustainability			
Priority guidelines and principles to promote sustainability shall include:			
(1) Encouraging balanced economic, social, community, and environmental priorities;	Х		
(2) Encouraging planning that respects and promotes living within the natural resources and limits of the State;	х		
(3) Promoting a diversified and dynamic economy;	Х		
(4) Encouraging respect for the host culture;	Х		
(5) Promoting decisions based on meeting the needs of the present without compromising the needs of future generations	Х		
(6) Considering the principles of the ahupua'a system; and	Х		
(7) Emphasizing that everyone, including individuals, families, communities, businesses, and government, has the responsibility for achieving a sustainable Hawai'i.			Х

#### 5.2.5 State Functional Plans

The Hawai'i State Plan directs State agencies to prepare functional plans for their respective program areas. There are 14 state functional plans that serve as the primary implementing vehicle for the goals, objectives, and policies of the Hawai'i State Plan. The functional plans applicable to the Master Plan Area, along with each plan's applicable objectives, policies, and actions, are discussed below.

 Table 5-3: State Functional Plans

	Hawai'i State Functional Plans	S	N/S	N/A
AGRICULTURE FUNCTIONAL PLAN				
Objective A:	Achievement of increased agricultural production and growth through cultural and management practices.	х		
Objective B:	Achievement of an orderly agricultural marketing system through product promotion and industry organization.			х
Objective C:	Achievement of increased consumption of and demand for Hawaii's agricultural products through consumer education and product quality.			х
Objective D:	Achievement of optimal contribution by agriculture to the State's economy.	х		
Objective E:	Achievement of adequate capital, and knowledge of its proper management, for agricultural development.			х
Objective F:	Achievement of increased agricultural production and growth through pest and disease controls.	х		
Objective G:	Achievement of effective protection and improved quality of Hawaii's land, water, and air.			х
Objective H:	Achievement of productive agricultural use of lands most suitable and needed for agriculture.	х		
Objective I:	Achievement of efficient and equitable provision of adequate water for agricultural use.			х
	Hawai'i State Functional Plans	S	N/S	N/A
---	---	-------------------------------	---------------------	----------------
Objective J:	Achievement of maximum degree of public understanding and support of agriculture in Hawai'i.			x
Objective K:	Achievement of adequate supply of properly trained labor for agricultural needs.			х
Objective L:	Achievement of adequate transportation services and facilities to meet agricultural needs.			х
Objective M:	Achievement of adequate support services and infrastructure to meet agricultural needs.	х		
Discussion: It is cultivation, while DHHL contracts	DHHL's goal to facilitate diversified agriculture on its lands formerly e providing some opportunities for residential, industrial and commercia with the University of Hawai'i College of Tropical Agriculture and Humar ational and technical assistance programs to Hawaiian Home Lands agric	used fo l uses. n Resou	or pine rces (Cl	apple FAHR)

Discussion: Not Use District bou	applicable. The Master Plan Area does not involve lands within the State ndaries.	e Conse	ervation	Land
EDUCATION FUNCT	IONAL PLAN			
Objective A(1):	<b>Academic Excellence.</b> Emphasize quality educational programs in Hawaii's institutions to promote academic excellence.			х
Objective A(2):	<b>Basic Skills.</b> Promote programs and activities that facilitate the acquisition of basic skills, such as reading, writing, computing, listening, speaking, and reasoning. Pursue effective programs which reflect the varied district, school, and student needs to strengthen basic skills achievement.			x
Objective A(3):	<b>Education Workforce.</b> Initiate efforts to improve the quality of education by improving the capabilities of the education workforce.			х
Objective A(4):	<b>Services and Facilities.</b> Ensure the provision of adequate and accessible educational services and facilities that are designed to meet individual and community needs.			х
Objective B(1):	<b>Alternatives for Funding and Delivery.</b> Explore alternatives for funding and delivery of educational services to improve the overall quality of education.			х
Objective B(2):	<b>Autonomy and flexibility.</b> Promote increased opportunities for greater autonomy and flexibility of educational institutions in their decision-making responsibilities.			х
Objective B(3):	<b>Increased Use of Technology.</b> Increase and improve the use information technology in education and encourage programs which increase the public's awareness and understanding of the impact of information technologies on our lives.			x
Objective B(4):	<b>Personal Development.</b> Support education programs and activities that enhance personal development, physical fitness, recreation, and cultural pursuits of all groups.			х
Objective B(5):	<b>Students with Special Needs.</b> Provide appropriate educational opportunities for groups with special needs.			х
Objective C(1):	<b>Early Childhood Education.</b> Develop resources and programs for early childhood education.			х
Objective C(2):	Hawaii's Cultural Heritage. Promote educational programs which enhance understanding of Hawaii's cultural heritage.	х		
Objective C(3):	<b>Research Programs and [Communication] Activities.</b> Support research programs and activities that enhance the education programs of the State.			х

	Hawai'i State Functional Plans	S	N/S	N/A	
<b>Discussion:</b> Although mostly not applicable, it is possible the proposed Community Use areas may include a site for Hawaiian language-immersion charter school.					
	NCHONAL PLAN				
Objective A:	Improve the qualifications of entry-level workers and their transition to employment.			х	
Objective B:	Develop and deliver education, training and related services to ensure and maintain a quality and competitive workforce.			х	
Objective C:	Improve labor exchange.			Х	
Objective D:	Improve the quality of life for workers and families.			Х	
Objective E:	Improve planning of economic development, employment and training activities			х	
Discussion: No	t applicable.	I	1		
ENERGY FUNCTIO	NAL PLAN				
Objective A:	Moderate the growth in energy demand through conservation and energy efficiency.	х			
Objective B:	Displace oil and fossil fuels through alternate and renewable energy resources.	х			
Objective C:	Promote energy education and legislation.			Х	
Objective D:	Support and develop an integrated approach to energy development and management.	х			
Objective E:	Ensure State's abilities to implement energy emergency actions immediately in event of fuel supply disruptions. Ensure essential public services are maintained and provisions are made to alleviate economic and personal hardships which may arise.			х

HEALTH FUNCTIO	NAL PLAN				
Objective 1:	Health promotion and disease prevention. Reduction in the incidence, morbidity and mortality associated with preventable and controllable conditions.			x	

	Hawai'i State Functional Plans	S	N/S	N/A
Objective 2:	Prevention and control of communicable diseases. Reduction in the incidence, morbidity, and mortality associated with infectious and communicable diseases.			x
Objective 3:	Health needs of special populations with impaired access to health care. Increased availability and accessibility of health services for groups with impaired access to health care programs.			x
Objective 4:	Community hospitals system. Development of a community hospital system which is innovative, responsive and supplies high quality care to the constituencies it serves.			x
Objective 5:	Environmental programs to protect and enhance the environment. Continued development of new environmental protection and health services programs to protect, monitor, and enhance the quality of life in Hawai'i.			x
Objective 6:	DOH leadership. To improve the Department of Health's ability to meet the public health need of the State of Hawai'i in the most appropriate, beneficial and economical way possible.			x
Discussion: Not	applicable.			
HIGHER EDUCATIO	N FUNCTIONAL PLAN			
Objective A:	A number and variety of postsecondary education institutions sufficient to provide the diverse range of programs required to satisfy individual and societal needs and interests.			x
Objective B:	The highest level of quality, commensurate with its mission and objectives, of each educational, research, and public service program offered in Hawai'i by an institution of higher education.			х
Objective C:	Provide appropriate educational opportunities for all who are willing and able to benefit from postsecondary education.			х
Objective D:	Provide financing for postsecondary education programs sufficient to ensure adequate diversity, high quality, and wide accessibility.			х
Objective E:	Increase program effectiveness and efficiency through better coordination of educational resources.			х
Discussion: Not applicable.				
HISTORIC PRESERV	ATION FUNCTIONAL PLAN			
Objective A:	Identification of historic properties.	Х		

	Hawai'i State Functional Plans	S	N/S	N/A
Objective B:	Protection of historic properties.	Х		
Objective C:	Management and treatment of historic properties.	Х		
Objective D:	Provision of adequate facilities to preserve historic resources.			Х
Objective E:	The establishment of programs to collect and conserve historic records, artifacts, and oral histories and to document and perpetuate traditional arts, skills, and culture.			х
Objective F:	Provision of better access to historic information.	Х		
Objective G:	Enhancement of skills and knowledge needed to preserve historical resources.			х

HOUSING FUNCTIO	NAL PLAN			
Objective A:	Increase and sustain the supply of permanent rental housing that is affordable and accessible to Hawai'i residents, particularly those with incomes at or below 80% AMI. Attain the legislative goal of 22,500 rental housing units by 2026.			x
Objective B:	Increase the homeownership rate.	Х		
Objective C:	Address barriers to residential development			Х
Objective D:	Maintain a statewide housing data system for use by public and private agencies engaged in the provision of housing.			х
Discussion: The HALE supports Homestead com	HALE Program, established in 2014 by DHHL aids beneficiaries with finance the department's primary mission of placing beneficiaries into home munities throughout the State of Hawai'i.	cial lite es with	racy ser nin Hav	vices. vaiian
HUMAN SERVICES	FUNCTIONAL PLAN			
Objective A:	To sustain and improve current elder abuse and neglect services.			Х
Objective B:	To increase cost-effective, high quality home and community based services.			х
Objective C:	To increase home-based services to keep children in their homes and to increase placement resources for those children who must be temporarily or permanently removed from their homes, due to abuse or neglect.			x

	Hawai'i State Functional Plans	S	N/S	N/A
Objective D:	To address factors that contribute to child abuse and other forms of family violence.			x
Objective E:	To provide affordable, accessible, and quality child care.			х
Objective G:	To provide AFDC recipients with a viable opportunity to become independent of the welfare system.			х
Objective H:	To facilitate client access to human services.			х
Objective I:	To eliminate organizational barriers which limit client access to human services.			х
Discussion: Not	applicable.			
RECREATION FUNCT	rional Plan			
Objective I.A:	Address the problem of saturation of the capacity of beach parks and nearshore waters.			x
Objective I.B:	Reduce the incidence of ocean recreation accidents.			х
Objective I.C:	Resolve conflicts between different activities at heavily used ocean recreation areas.			х
Objective I.D:	Provide adequate boating facilities. Balance the demand for boating facilities against the need to protect the marine environment from potential adverse impacts.			x
Objective II.A:	Plan, develop, and promote recreational activities and facilities in mauka and other areas to provide a wide range of alternatives.			х
Objective II.B:	Meet special recreation needs of the elderly, the disabled, woman, single-parent families, immigrants, and other groups.			х
Objective II.C:	Improve and expand the provision of recreation facilities in urban areas and local communities.			х
Objective III.A:	Prevent the loss of access to shoreline and upland recreation areas due to new developments.			х
Objective III.B:	Resolve the problem of landowner liability that seriously hampers public access over private lands.			x
Objective III.C:	Increase access to State Forest Reserve lands over federal property, leased State lands, and other government lands.			x
Objective III.D:	Acquire, develop, and manage additional public accessways.			Х

	Hawai'i State Functional Plans	S	N/S	N/A
Objective IV.A:	Promote a conservation ethic in the use of Hawaii's recreational resources.			x
Objective IV.B:	Prevent degradation of the marine environment.			Х
Objective IV.C:	Improve the State's enforcement capabilities.			Х
Objective IV.D:	Mitigate adverse impacts of tour helicopters on the quality of recreational experiences in wilderness areas.			x
Objective V.A:	Properly maintain existing parks and recreation areas.			Х
Objective V.B:	Promote interagency coordination and cooperation to facilitate sharing of resources, joint development efforts, clarification of responsibilities and jurisdictions, and improvements in enforcement capabilities.			x
Objective V.C:	Assure adequate support for priority outdoor recreation programs and facilities.			х
Objective VI.A:	Increase recreational access and opportunities in Hawaii's wetlands.			Х
Objective VI.B:	Develop an adequate information base to assist the County planning departments and other regulatory agencies in make decisions regarding wetlands.			x
Objective VI.C:	Assure the protection of the most valuable wetlands in the state.			Х

WATER RESOURCES DEVELOPMENT FUNCTIONAL PLAN

	Hawai'i State Functional Plans	S	N/S	N/A
Objective A:	Enunciate State water policy and improve management framework.			Х
Objective B:	Maintain the long-term availability of freshwater supplies, giving consideration to the accommodation of important environmental values.			x
Objective C:	Improve management of floodplains.			Х
Objective D:	Assure adequate municipal water supplies for planned urban growth.			Х
Objective E:	Assure the availability of adequate water for agriculture.			Х
Objective F:	Encourage and coordinate with other water programs the development of self-supplied industrial water and the production of water-based energy.			
Objective G:	Provide for the protection and enhancement of Hawaii's freshwater and estuarine environment.			х
Objective H:	Improve State grant and loan procedures for water program and projects.			х
Objective I:	Pursue water resources data collection and research to meet changing needs.			х
<b>Discussion:</b> Not applicable as these objectives may be better directed to the State Department of Land and Natural Resources (Commission of Water Resources Management, Engineering Division) and County of Maui Departments of Water Supply and Public Works).				

#### Final Environmental Assessment- Finding of No Significant Impact

#### 5.2.6 Hawai'i State Environmental Policy and Guidelines, Chapter 344-3 and 344-4, HRS

The State Environmental Policy provides guidelines for agencies to create and maintain conditions under which humanity and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of the people of Hawai'i. The environmental guidelines (§344-4, HRS) suggest that insofar as practical, in the development of programs consider: population; land, water, mineral, visual, air, and other natural resources; flora and fauna; parks, recreation, and open space; economic development; transportation; energy; community life and housing; education and culture; and, citizen participation.

#### Table 5-4: Hawai'i State Environmental Policy and Guidelines, Ch. 344-3 and 344-4, HRS

GUIDELINES			
<b>§344-4 Guidelines.</b> In pursuance of the state policy to conserve the natural resources and of life, all agencies, in the development of programs, shall, insofar as practicable, conguidelines:	enhan nsider	ce the q the follo	uality owing
(1) Population.			
<ul> <li>(A) Recognize population impact as a major factor in environmental degradation and adopt guidelines to alleviate this impact and minimize future degradation;</li> </ul>			x
(B) Recognize optimum population levels for counties and districts within the State, keeping in mind that these will change with technology and			Х

State Environmental Policy, Chapter 344, Hawai'i Revised Statutes	S	N/S	N/A		
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)					
circumstance, and adopt guidelines to limit population to the levels determined.					
Discussion: Not applicable.					
(2) Land, water, mineral, visual, air, and other natural resources.					
<ul> <li>(A) Encourage management practices which conserve and fully utilize all natural resources;</li> </ul>	x				
(B) Promote irrigation and waste water management practices which conserve and fully utilize vital water resources;	x				
(C) Promote the recycling of waste water;	Х				
<ul> <li>(D) Encourage management practices which conserve and protect watersheds and water sources, forest, and open space areas;</li> </ul>	x				
<ul> <li>(E) Establish and maintain natural area preserves, wildlife preserves, forest reserves, marine preserves, and unique ecological preserves;</li> </ul>			х		
<ul> <li>(F) Maintain an integrated system of state land use planning which coordinates the state and county general plans;</li> </ul>			х		
(G) Promote the optimal use of solid wastes through programs of waste prevention, energy resource recovery, and recycling so that all our wastes become utilized.	x				
<b>Discussion:</b> The Master Plan will be designed to efficiently utilize natural resources such as water and soil. Infrastructure planning for water source development, storage and delivery will include potable, non-potable and recycled water (from treated effluent) sources.					
During construction, a job-site recycling plan will be developed and, as much as possil demolition waste will be recycled. Separate containers will be provided for separate t waste, which will be separated from municipal solid waste. Maui Scrap Metal accepts of for recycling. Maui Earth Compost & Soil Mixes accepts drywall. Maui Eko Systems, Inc., a Maui accept clean, untreated lumber. Remaining types of wastes may be recycled if a lo is available. Otherwise, non-recyclable construction wastes will be disposed in the	ole, con ypes of cardboa nd Cam ocal rec ne con:	estructio f constru- ard and paign Re cycling ve structior	n and uction metal ecycle endor n and		

Final Environmental Assessment- Finding of No Significant Impact

After construction, DHHL will implement strategies from the County's Integrated Solid Waste Management Plan (2009) for diverting solid waste from landfills by providing options for recycling. The goal for waste management is to appropriately reduce, reuse and recycle materials, to minimize generation of solid waste and achieve diversion from landfills. As such, in conformance with Chapter 344-4(2), HRS, operations within the Master Plan Area will promote the optimal use of solid wastes through programs of waste prevention, energy resource recovery, and recycling.

(3) Flora and fauna.

demolition landfill near Mā'alaea.

State Environmental Policy, Chapter 344, Hawai'i Revised Statutes	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<ul> <li>(A) Protect endangered species of indigenous plants and animals and introduce new plants or animals only upon assurance of negligible ecological hazard;</li> </ul>	x		
(B) Foster the planting of native as well as other trees, shrubs, and flowering plants compatible to the enhancement of our environment.	x		
<b>Discussion:</b> Based on biological surveys conducted for the Master Plan Area, no signibiological resources are expected. Where feasible, any new landscaping for the Master P planting of native as well as other trees, shrubs, and flowering plants compatible to the environment.	gnifican Plan Are enhano	it impac ea will in cement o	ts on clude of our
(4) Parks, recreation, and open space.			
<ul> <li>(A) Establish, preserve and maintain scenic, historic, cultural, park and recreation areas, including the shorelines, for public recreational, educational, and scientific uses;</li> </ul>	x		
<ul> <li>(B) Protect the shorelines of the State from encroachment of artificial improvements, structures, and activities;</li> </ul>			х
(C) Promote open space in view of its natural beauty not only as a natural resource but as an ennobling, living environment for its people.	x		
<b>Discussion:</b> The Master Plan will not adversely impact any scenic resources. DHHL respective identified in the County's Maui Island Plan, and will be generally consistent with it Honoapi'ilani Highway, which is categorized as a "medium" level scenic corridor in the version Plan Area. For example, appropriate building setbacks will be utilized, and wall heights a limited along the highway. Development of the Master Plan Area will change the vis property from vacant lands to that of a rural community, primarily agricultural, with a reserved section 4.5.	ects sce s polic icinity are anti ual cha nixture	enic reso ies rega of the N icipated aracter of a of land	ources arding laster to be of the uses.
(5) Economic development.			
<ul> <li>(A) Encourage industries in Hawai'i which would be in harmony with our environment;</li> </ul>			х
<ul> <li>(B) Promote and foster the agricultural industry of the State; and preserve and conserve productive agricultural lands;</li> </ul>	x		
(C) Encourage federal activities in Hawai'i to protect the environment;			Х
<ul> <li>(D) Encourage all industries including the fishing, aquaculture, oceanography, recreation, and forest products industries to protect the environment;</li> </ul>			х
<ul> <li>(E) Establish visitor destination areas with planning controls which shall include but not be limited to the number of rooms;</li> </ul>			х

<b>Discussion:</b> Through this EA and through public meetings, DHHL has sought input on the beneficiaries, as well as the general public.	Master	Plan fro	om its

#### 5.3 COUNTY OF MAUI

County-specific land use plans and ordinances pertaining to The Master Plan Area include the Countywide Policy Plan, Draft Maui Island Plan, and the West Maui Community Plan.

#### 5.3.1 **Countywide Policy Plan**

The *Countywide Policy Plan* was adopted in March 2010 and is a comprehensive policy document for the islands of Maui County to the year 2030. The plan replaces the *General Plan of the County of Maui 1990 Update* and provides the policy framework for the development of the County's *Maui Island Plan* as well as for updating the nine detailed Community Plans.

#### Final Environmental Assessment- Finding of No Significant Impact

The *Countywide Policy Plan* provides broad goals, objectives, policies and implementing actions that portray the desired direction of the County's future. Goals are intended to describe a desirable condition of the County by the year 2030 and are intentionally general. Objectives tend to be more specific and may be regarded as milestones to achieve the larger goals. Policies are not intended as regulations, but instead provide a general guideline for County decision makers, departments, and collaborating organizations toward the attainment of goals and objectives. Implementing actions are specific tasks, procedures, programs, or techniques that carry out policy.

Discussions of how the Master Plan conforms to the relevant goals of the *Countywide Policy Plan* are provided below.

#### A. PROTECT THE NATURAL ENVIRONMENT

**Goal:** Maui County's natural environment and distinctive open spaces will be preserved, managed, and cared for in perpetuity.

**Discussion**: The Master Plan Area are lands that have been utilized for pineapple cultivation. These lands are neither unique nor fragile or contain rare or endangered plant and animal species and habitats native to Hawai'i. Moreover, the alternative of no action (leaving the lands in its mostly fallow state) would not represent prudent use of DHHL and Hawai'i's land-based resources.

The Master Plan will not adversely impact any scenic resources. DHHL respects scenic resources identified in the County's Maui Island Plan, and will be generally consistent with its policies regarding Honoapi'ilani Highway, which is categorized as a "medium" level scenic corridor in the vicinity of the Master Plan Area. For example, appropriate building setbacks will be utilized, and wall heights are anticipated to be limited along the highway. Development of the Master Plan Area will change the visual character of the property from vacant lands to that of a rural community, primarily agricultural, with a mixture of land uses.

#### B. PRESERVE LOCAL CULTURES AND TRADITIONS

**Goal**: Maui County will foster a spirit of pono and protect, perpetuate, and reinvigorate its residents' multi-cultural values and traditions to ensure that current and future generations will enjoy the benefits of their rich island heritage.

**Discussion:** DHHL's primary intent is repurpose lands that have long been in pineapple cultivation to subsistence agricultural, residential, community, commercial, and industrial use, and to support those uses with adequate infrastructure, including sanitary wastewater treatment and disposal. DHHL's plans for the Master Plan Area are being developed in consultation with its stakeholders, native Hawaiian beneficiaries.

#### C. IMPROVE EDUCATION

**Goal**: Residents will have access to lifelong formal and informal educational options enabling them to realize their ambitions.

#### **DHHL HONOKŌWAI MASTER PLAN** Final Environmental Assessment- Finding of No Significant Impact

**Discussion:** Recent beneficiary input indicated that the preferred land use program for the Master Plan Area should include a much higher diversity of uses than those provided for under the existing Maui Island Plan designations. In addition to the existing designations, beneficiaries expressed support for multi-family housing and community uses, including kūpuna housing, adult daycare, charter school, child daycare, farmer's market, agricultural hub, etc. The Proposed Action will also offer important opportunities for cultural education as described in Section 4.2.

#### E. EXPAND HOUSING OPPORTUNITIES FOR RESIDENTS

#### **Goal**: *Quality, island-appropriate housing will be available to all residents.*

**Discussion:** The HALE Program, established in 2014 by DHHL aids beneficiaries with financial literacy services. HALE supports the department's primary mission of placing beneficiaries into homes within Hawaiian Homestead communities throughout the State of Hawai'i. Currently HALE offers two types of services for beneficiaries. They include Homebuyer Education classes and Foreclosure Prevention Management. HALE services also support beneficiaries in times of need. DHHL acknowledges that beneficiaries may encounter life events that may negatively affect their financial situation such as unemployment, increased expenses due to the loss of a household member, an unexpected medical situation and other events.

#### F. STRENGTHEN THE LOCAL ECONOMY

#### **Goal:** Maui County's economy will be diverse, sustainable, and supportive of community values.

**Discussion:** The Proposed Action will contribute to a strong, viable economy on Maui, by generating places of employment closer to the workforce who may reside in West Maui. Additionally, the plan for agriculture in The Master Plan Area addresses some DHHL beneficiaries' expressed interests in farming, community responsibility, of caring and of participation in community life.

#### G. IMPROVE PARKS AND PUBLIC FACILITIES

# **Goal:** A full range of island-appropriate public facilities and recreational opportunities will be provided to improve the quality of life for residents and visitors.

**Discussion:** The Proposed Action includes a wide range of land uses, and ultimately the community will include multiple community facilities and recreational opportunities for site users. The Proposed Action will not impede the County's ability to continue to provide these services to the greater Maui community.

#### H. DIVERSIFY TRANSPORTATION OPTIONS

**Goal:** Maui County will have an efficient, economical, and environmentally sensitive means of moving people and goods.

**Discussion:** DHHL would be supportive of accommodations for bus stops for the County's public transportation system (Maui Bus).

#### Final Environmental Assessment- Finding of No Significant Impact

#### I. IMPROVE PHYSICAL INFRASTRUCTURE

**Goal:** Maui County's physical infrastructure will be maintained in optimum condition and will provide for and effectively serve the needs of the County through clean and sustainable technologies.

**Discussion:** The Proposed Action will not have an adverse impact on Maui County's physical infrastructure, and any infrastructure proposed to support the Master Plan Area will be done so in coordination with the appropriate County agencies.

#### J. PROMOTE SUSTAINABLE LAND USE AND GROWTH MANAGEMENT

**Goal:** Community character, lifestyles, economies, and natural assets will be preserved by managing growth and using land in a sustainable manner.

**Discussion:** The West Maui Community Plan is one of nine community plans developed to address the unique aspects of each region. According to the West Maui Community Plan Land Use Map, the Master Plan Area is designated Agricultural. While the Hawaiian Homes Commission Act (Sections 204 and 206), which has been incorporated into Article XII of the Hawai'i State Constitution, vests DHHL with exclusive authority to control its lands, Honokōwai is intended to be an agricultural community and is therefore consistent with the West Maui Community Plan.

#### K. STRIVE FOR GOOD GOVERNANCE

**Goal:** Government services will be transparent, effective, efficient, and responsive to the needs of residents.

**Discussion:** The Proposed Action does not impede this objective and as a government service itself, DHHL strives to be transparent, effective, efficient, and responsive to the needs of the public in the interest of its beneficiaries and mission.

#### 5.3.2 County's Maui Island Plan

The Maui Island Plan derives its framework from Maui County's Countywide Policy Plan adopted in 2010. The Maui Island Plan establishes urban and rural growth areas in order to promote future growth while preserving natural resources and character. There are three Growth Boundary types: Urban, Small Town, and Rural.

The Hawaiian Homes Commission Act (Sections 204 and 206), which has been incorporated into Article XII of the Hawai'i State Constitution, vests DHHL with exclusive authority to control its lands, and the anticipated land uses are generally consistent with the Department's existing Maui Island Plan.

#### Final Environmental Assessment- Finding of No Significant Impact

#### 5.3.3 West Maui Community Plan

The West Maui Community Plan is one of nine community plans developed to address the unique aspects of each region. According to the West Maui Community Plan Land Use Map, the Master Plan Area is designated Agricultural (Figure 21).

The West Maui Community Plan is currently undergoing an update, undertaken by the County of Maui Planning Department. The current plan was completed in 1996. The designation of the Master Plan Area as shown in the draft update is generally the same as that shown in 1996, and the draft update acknowledges DHHL's master planning efforts at Honokōwai. The CP is in the final phase of its update, review by the Maui County Council.

DHHL also notes that the Hawaiian Homes Commission Act (Sections 204 and 206) vests DHHL with exclusive authority to control its lands.

#### 5.3.4 County of Maui Zoning

The Master Plan Area is mostly in the County's AG Agriculture zoning district, and the Proposed Action includes other land uses such as residential, industrial and commercial, the Hawaiian Homes Commission Act (Sections 204 and 206) vests DHHL with exclusive authority to control its lands.

#### 5.3.5 Special Management Area

The Master Plan Area is not located within the Special Management Area (SMA).

#### 5.4 **APPROVALS AND PERMITS**

A listing of anticipated permits and approvals required for the Master Plan Area is presented below.

#### Table 5-5: Anticipated Permits and Approvals

RESPONSIBLE AGENCY	PERMIT/APPROVAL		
State Department of Health – Clean Water Branch	National Pollutant		
	Discharge Elimination System (NPDES) Permit		
State Department of Health – Disability and Communication Access Board	Review		
State Department of Health – Indoor and Radiological Health Branch	Community Noise Permit (if applicable)		
State Department of Health – Wastewater Branch	Review, Individual Wastewater System approval (by future lessees)		

State Department of Land and Natural Resources – State Historic Preservation Division	Chapter 6E, HRS compliance and Section 106 compliance as needed
State Department of Land and Natural Resources – Commission on Water Resource Management	Surface Water Use Permit (if applicable)
County of Maui Department of Public Works	Grading/Subdivision/Building/Electrical Permits, plan review
County of Maui Department of Water Supply	Review
County of Maui Planning Department and/or Planning Commission	Flood Development Permit (if applicable)
County of Maui Wastewater Reclamation Division	Review

### 6 ALTERNATIVES

This section identifies and evaluates a range of alternatives that could meet the purpose and need for the proposed Master Plan, and possibly avoid, reduce, or minimize adverse environmental effects. The reference point to compare alternatives is the "no action" alternative.

#### 6.1 NO ACTION ALTERNATIVE

With the "no action" alternative, the Master Plan Area remains underutilized. Homesteading opportunities to relocate existing lessees or to award new leases to those on the wait list would not be realized.

#### 6.2 **ALTERNATIVE SITES**

DHHL's landholdings in West Maui are limited to the Master Plan Area and DHHL's Leiali'i Village property in Lahaina. However, the latter has already been planned as a residential community and therefore cannot accommodate the Proposed Action. The next nearest DHHL lands are located in Central Maui (Waiehu, Paukūkalo, Wailuku, Pūlehunui).

#### 6.3 ALTERNATIVE LAND USES

DHHL has recently updated its plans for the Master Plan Area. Three alternative land use plans were developed, differentiated by their development intensity. The alternative land use plans can be described as:

- Subsistence Agriculture with Community Farming
- Subsistence Agriculture Only; and
- Single-Family and Multi-Family with Subsistence Agriculture (preferred alternative)

A table summarizing the land uses proposed with each alternative are shown in Table 6-1.

Proposed Uses	Max. Number of Homes per Acre	Subsistence Agriculture (Homesteads) with Community Farming Alternative <sup>12</sup>		Subsister Agricultu Alternati	nce re Only ve <sup>12</sup>	Single-Fa Multi-Far Subsister Agricultu Alternati (preferre	mily and nily with nce re ve ve
		Acres	lots/ homes	Acres	lots/ homes	Acres	lots/ homes
Subsistence Agricultural Homesteads: 1 to 2 acre lots	1	337	250	438	348	342	252
Subsistence Agricultural Homesteads: 1/2 acre lots	2	88	155	0	0	0	0
Residential Homesteads: Single-Family (7,500 sf Lots)	6	0	0	0	0	75	356
Residential Homesteads: Multi-Family	15	15	232	15	232	37	573
Supplemental Agriculture (Non- residential Homesteads)	0	14	0	14	0	14	0
Community Use: Agriculture	0	43	0	20	0	16	0
Community Use: Parks	0	13	0	15	0	28	0
Community Use: Commercial	0	24	0	24	0	27	0
Conservation: Gulches & Buffers	0	146	0	146	0	146	0
Industrial	0	15	0	15	0	16	0

<sup>&</sup>lt;sup>12</sup> Acreages for this alternative were not modified to reflect the removal of the Lahaina Bypass set-aside, as this change occurred after identification of the anticipated preferred alternative. However DHHL notes that the anticipated preferred alternative is the most intense of the three being considered, and therefore would result in the most impact.

Proposed Uses	Max. Number of Homes per Acre	Subsistence Agriculture (Homesteads) with Community Farming Alternative <sup>12</sup>		Subsister Agricultu Alternati	nce re Only ve <sup>12</sup>	Single-Fa Multi-Fa Subsister Agricultu Alternati (preferre	mily and mily with nce re ve <b>:d)</b>
		Acres	lots/ homes	Acres	lots/ homes	Acres	lots/ homes
Roads	0	64	0	72	0	58	0
<b>County Facilities</b>	0	18	0	18	0	18	0
Total Subsistence Agricultural Homesteads		425	405	438	348	342	252
Total Residential Homesteads		15	232	15	232	112	929
Total Acres & Lots in Honokōwai		777	637	777	580	777	1,181

Final Environmental Assessment- Finding of No Significant Impact

Descriptions of the Proposed Uses shown on Table 6-1 are described in detail in Section 2.3.

Each alternative land use plan includes lands set aside for County use, including the Mahinahina Water Treatment Plant (refer to Section 0). Each alternative land use plan also includes walking paths that connect gulches and the following land uses, but with varying acreages: "Subsistence Agricultural Homesteads: 1 to 2 acre lots"; "Residential Homesteads: Multi-Family"; "Community Use: Agriculture"; "Community Use: Parks"; and "Roads". The differences can be summarized as follows and are shown in Table 6-2:

<u>Subsistence Agriculture (Homesteads) with Community Farming Alternative</u> – This is the only alternative of the three that provides for "Subsistence Agricultural Homesteads: 1/2 acre lots", and it allots significantly more land area for "Community Use: Agriculture" than the other alternatives.

<u>Subsistence Agriculture Only Alternative</u> – As this alternative is labelled, it leads the other alternatives in the number of acres that would be committed to "Subsistence Agricultural Homesteads: 1 to 2 acre lots". This alternative does not include smaller "Subsistence Agricultural Homesteads: 1/2 acre lots" or "Residential Homesteads: Single-Family".

<u>Single-Family and Multi-Family with Subsistence Agriculture Alternative</u> – As labelled, implementation of this alternative would generate the most homes/lots as it is the only alternative to provide "Residential Homesteads: Single-Family (7,500 sf Lots)" as well as 20 more acres of "Residential Homesteads: Multi-Family". To address the significantly greater number of homes/lots, the alternative allots nearly twice as much area for "Community Use: Parks". Even with nearly double number of home/lots than the other alternatives, this alternative would result

Final Environmental Assessment- Finding of No Significant Impact

in an overall project density of 1.5 units per acre. In comparison, given a minimum lot size 7,500 square feet only five single-family homes could be developed on an acre of land (i.e., five units per acre).

Proposed Uses	Subsistence Agriculture (Homesteads) with Community Farming Alternative <sup>13</sup>		Subsistence Agriculture Only Alternative <sup>13</sup>		Single-Family and Multi-Family with Subsistence Agriculture Alternative (preferred)	
	Acres	lots/ homes	Acres	lots/ homes	Acres	lots/ homes
Subsistence Agricultural Homesteads: 1 to 2 acre lots	347	250	451	348	342	252
Subsistence Agricultural Homesteads: 1/2 acre lots	91	155	0	0	0	0
Residential Homesteads: Single-Family (7,500 sf Lots)	0	0	0	0	75	356
Residential Homesteads: Multi- Family	16	232	16	232	37	573
Community Use: Agriculture	44	0	21	0	16	0
Community Use: Parks	15	0	17	0	28	0
Roads	66	0	74	0	58	0

Table 6-2:	Major Land	<b>Use Differences</b>	<b>Between Alternatives</b>
------------	------------	------------------------	-----------------------------

The beneficiary community's preferred alternative is also the alternative that would generate the most homes/lots. For the purposes of this "programmatic" EA, since the other alternatives would result in lesser numbers of homes/lots (51% and 56% of the development potential shown in

<sup>&</sup>lt;sup>13</sup> Acreages for this alternative were not modified to reflect the removal of the Lahaina Bypass set-aside, as this change occurred after identification of the anticipated preferred alternative. However DHHL notes that the anticipated preferred alternative is the most intense of the three being considered, and therefore would result in the most impact.

Figure 5), analyzing the alternative that would generate the most homes/lots should also adequately address impacts of the other alternatives, which would generate less impacts. (DHHL notes that the less impactful alternatives would also be less consistent with DHHL's mission "...to develop and deliver lands to native Hawaiians.") Refer to Section 2.3 for an overview of Beneficiary Consultation and the development of the master plan.

#### 6.4 WASTEWATER INFRASTRUCTURE ALTERNATIVES

DHHL evaluated two wastewater infrastructure options for each of the three land use alternatives. The infrastructure alternatives can be described as:

- Use of DOH approved individual wastewater systems (IWS) on lots greater than 1-acre with remaining Master Planned area connected to LWWRF alternative (anticipated preferred alternative); and
- Connection of entire Master Planned area to LWWRF alternative.

While the use of IWS is the anticipated preferred alternative and is described in Section 4.8.2, DHHL notes that the utilization of the LWWRF to service the entire Master Plan Area will be considered if necessary. Ultimately, DHHL anticipates that the latter alternative would result in lower impacts for several reasons. First, it could be faster and easier to address unintentional releases from a centralized sewer system as compared to up to 252 IWS units. Therefore, impacts to water resources may be lower under the latter alternative. Second, it may result in lower up front and maintenance costs, particularly if aerobic treatment units are required by the relevant State and/or County agencies.

(This page left blank intentionally.)

### 7 FINDINGS AND DETERMINATION

To determine whether the implementation of the Master Plan may have a significant impact on the physical and human environment, all phases and expected consequences of the Master Plan have been evaluated, including potential primary, secondary, short-range, long-range, and cumulative impacts. Based on this evaluation, DHHL is issuing this Finding of No Significant Impact (FONSI). The supporting rationale for this finding is presented in this chapter.

#### 7.1 SIGNIFICANCE CRITERIA

This section evaluates the significance of the Proposed Action's impacts based on the Significance Criteria set forth in Hawai'i Administrative Rules §11-200.1-13.

The Significance Criteria in the Hawai'i Administrative Rules and discussed below, are considered in light of every phase of a Proposed Action, the expected impacts, and proposed mitigation measures. In most cases, an action shall be determined to have a significant impact on the environment if may:

#### (1) Irrevocably commit a natural, cultural, or historic resource;

**Discussion:** The proposed project is not anticipated to involve any construction activity that may lead to a loss or destruction of any sensitive natural or cultural resource. The Master Plan Area has been the subject of flora/fauna, archaeological and cultural studies. Natural, cultural and historic resources are concentrated in the gulches that run through the Master Plan Area, away from where development activities are proposed. Measures to avoid impacts to natural, cultural, and historic resources are identified within this document should they inadvertently be encountered in the development phases of the Proposed Action.

#### (2) Curtail the range of beneficial uses of the environment;

**Discussion:** The Project expands the beneficial use of the Master Plan Area by providing affordable housing opportunities and potential for a return to agricultural uses on land that is lying fallow.

# (3) Conflict with the State's environmental policies or long-term environmental goals established by law;

**Discussion:** The proposed project is not in conflict with the long-term environmental policies, goals, and guidelines of the State of Hawai'i. As presented earlier in this EA, the project's potential adverse impacts are associated only with the short-term construction-related activities, and such impacts can be mitigated through adherence to standard construction mitigation practices.

# (4) Have a substantial adverse effect on the economic welfare, social welfare, or cultural practices of the community and State;

**Discussion:** The proposed project will have beneficial effects on the economy and social welfare through the construction of homes for Beneficiaries of the Hawaiian Home Lands Trust, and

creating opportunities for a return of agricultural practices on lands that are lying fallow. Commercial and community uses proposed in the Project Area will support the new residents and agricultural uses. The Proposed Action is also expected to provide beneficial impacts with respect to cultural practices, by creating opportunities to grow, process, trade, and sell traditional and or native plants that can serve aesthetic, traditional and educational purposes.

#### (5) Have a substantial adverse effect on public health;

**Discussion:** There will be temporary impacts to noise and air quality levels during the construction phase of the project; however, these potential impacts will be short-term and are not expected to substantially affect public health. Wastewater disposal will occur in compliance with State Department of Health standards, through connection to the existing sewer infrastructure and individual septic systems approved by the Department of Health.

# (6) Involve adverse secondary impacts, such as population changes or effects on public facilities;

**Discussion:** Although the Project will increase population in the immediate area, the population increase has been planned for through long-range land use and infrastructure planning on the part of DHHL, the County of Maui and the State of Hawai'i as discussed throughout this EA.

#### (7) Involve a substantial degradation of environmental quality;

**Discussion**: Construction activities associated with the proposed project are anticipated to result in negligible short-term impacts to noise and air-quality in the immediate vicinity. With the incorporation of the recommended mitigation measures during the construction period, the project will not result in degradation of environmental quality. No long term negative impacts are expected from project implementation.

# (8) Be individually limited but cumulatively have substantial adverse effect upon the environment, or involves a commitment for larger actions;

**Discussion:** The design of the Master Plan Area minimizes cumulative impacts to the environment. These design elements include use of R-1 water for irrigation, landscape buffers adjacent to gulches, and grassed swales to accommodate and return water to the ground rather than piping toward nearshore resources. The Proposed Action does not instigate a commitment for larger actions. As described throughout this document, long term land use planning and infrastructure planning have identified the Plan Area (and surrounding lands) for development and as such, DHHL, the County of Maui, and the State of Hawai'i have been developing or projecting infrastructure improvements to support the development.

# (9) Have a substantial adverse effect on a rare, threatened or endangered species or its habitat;

**Discussion:** The Proposed Action is not anticipated to have any adverse impact to rare, threatened, or endangered species. Opportunities for positive impact on botanical resources are created by the Proposed Action through reintroduction of traditional practices and supporting

Final Environmental Assessment- Finding of No Significant Impact

resources including ethnic and/or native species, and incorporation of native species in landscaping.

Mitigation measures to avoid impacts to seabirds, Hawaiian hoary bat, nēnē, pueo and Blackburn's Sphynx Moth are included in this EA.

#### (10) Have a substantial adverse effect on air or water quality or ambient noise levels;

**Discussion:** Construction activities for development of the Project could potentially impact noise and air and water quality levels on the Master Plan Area. However, these impacts will be shortterm and mitigatable. All construction activities will comply with applicable regulations and will implement appropriate mitigation measures as necessary. After construction, the development is not expected to adversely impact ambient noise levels or water and air quality. There will be an increase in impervious surfaces over the Master Plan Area's former undeveloped use; however, any increase in runoff will be accommodated by proposed low-impact drainage improvements and will not detrimentally affect water quality.

(11) Have a substantial adverse effect on or be likely to suffer damage by being located in an environmentally sensitive area such as a flood plain, tsunami zone, sea level rise exposure area, beach, erosion-prone area, geologically hazardous land, estuary, fresh water, or coastal waters;

**Discussion:** The development will not affect any environmentally sensitive area and buffers are proposed adjacent to the gulches and streams that run through the Master Plan Area. Development areas are located outside FIRM-designated flood plains and inland from the coast away from tsunami zones, sea level rise exposure areas, and beaches. Homes will be constructed in compliance with County of Maui building codes, which are adopted to protect residents to the extent possible from hazardous weather conditions.

# (12) Have a substantial adverse effect on scenic vistas and viewplanes, during day or night, identified in county or state plans or studies; or,

**Discussion:** The Master Plan Area is not specifically listed as a scenic vista or view plane. Expected development is of a low-rise nature that will not be impactful to views across the landscape.

#### (13) Require substantial energy consumption or emit substantial greenhouse gases.

**Discussion:** The Proposed Action will increase energy consumption over the current use, vacant land. However, energy consumption of the proposed uses is not considered to be "substantial". DHHL has developed and is implementing its own renewable energy policy and works within a variety of programs to assist Beneficiaries with financing solar or other renewable sources of energy as a means to reduce household utility costs.

Based on these criteria, DHHL does not expect that activities associated with the Proposed Action would have a significant effect on the environment.

#### 7.2 **DETERMINATION**

Pursuant to Chapter 343, HRS, the determining agency, the Department of Hawaiian Home Lands is issuing this Finding of No Significant Impact (FONSI) for this environmental assessment. This finding is based on analysis of impacts and mitigation measures examined in this document, public comments received during the pre-assessment consultation, and analyzed under the above criteria.

### 8 CONSULTATION

#### 8.1 PRE-ASSESSMENT CONSULTATION

Pre-assessment consultation letters were mailed in October 2019 to various agencies and organizations listed below. The purpose of the pre-assessment consultation was to consult with agencies, organizations and individuals with technical expertise, or an interest or will be affected by the proposed project. This process is part of the scoping process for the Draft EA. Comments and input received during this period were used to identify environmental issues and concerns to be addressed in the Draft EA, which in turn underwent a 30-day public comment period.

Those that provided written comments (either by mail or email) are marked with an asterisk. Copies of the written comments and responses are reproduced in Appendix A1.

July 6, 2021	Mr. Sven Lindstrom Remedial Project Manager State of Hawai'i Department of Health - Hazard Evaluation and Emergency Response Office P.O. Box 3378	ROHOHUHU, FIL 90801-327.0 SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÔWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKÔWAI AHUPUA'A, KÃ'ANAPALI MOKU, LAHAINA	DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038 Dear Mr. Lindstrom. On behalf of the Department of Hawaiian Home Lands (DHHL), thank vou for vour letter	dated November 25, 2019 (your reference code 172129 SL) regarding the Pre-Assessment Consultation for the DHHL Honokõwai Master Plan. We acknowledge your comments (reproduced below).	The site appears to have been historically used for large-scale cultivation. Residual pesticides in former agricultural lands could pose potential risks to human health and the environment in a residential setting. HEER Office guidance recommends that sites with known pesticide-related contamination and also those where pesticides were regularly	applied be evaluated for residual contamination prior to re-development (HDOH Technical Guidance Manual [TGM] Interim Final, 2014, Section 9.1). A Sampling and Analysis Work Plan should be submitted to the HEEE Office for review and approval prior to conducting such an evaluation. Where soil contamination concentrations exceed HDOH Ter 1	Environmental Action Levels (EALs), land use restrictions or remedial action may be required. <b>Response:</b> The forthcoming Draft Environmental Assessment (Draft EA) will state:	<ul> <li>To ensure the health and safety of future Master Plan Area users, DHHL will adhere to the following mitigation measures.</li> <li>Retain an environmental consultant to submit a Sampling and Analysis Work Plan to the HEER Office, evaluating residual pesticide risk in any areas of the Master Plan Area intended for areas intended for re-development.</li> <li>If contamination is confirmed or likely, DHHL will issue a notice to site users and,</li> </ul>	as needed, DHHL will address contamination concerns in cooperation with the HEER Office including through possible land use restrictions or remedial action. We appreciate your participation in the environmental review process. Your comments will	be reproduced in the Draft EA. Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact me at (808) 521-5631.	Sincerely, CCCOOL Catie Cullison, AICP Principal Cc: Department of Hawaiian Home Lands

Dear Ms. Cullison:

Honolulu, Hawaii 96813-3484

TMK: (2) 4-4-001:015, (2) 4-4-002:003, 008, 009, 011, 015, 018 and 038 Located in Honokowai Ahupua'a, Ka'anapali Moku, Lahaina District, Pre-Assessment Consultation for DHHL Honokowai Master Plan County of Maui Subjects

Thank you for the opportunity to review this project. We have the following comments to offer:

The wastewater disposal method was not addressed in the information provided. If the project will not be connected to the County sewer system, please provide wastewater disposal method that complies with Chapter 11-62. If you have any questions, please contact Roland Tejano, Environmental Engineer, at 808 984-8232. It is strongly recommended that you review the department's website at https://health.hawaii.gov/epo/files/2018/05/DOHEHA.LandUseContactList.20180502.pdf and any comments specifically applicable to this project should be adhered to.

Should you have any questions, please contact me at 808 984-8230 or email me at patricia kitkowski@doh.hawail.gov.

Sincerely,

Parti Kilenust

District Environmental Health Program Chief Patti Kitkowski

Department of Health - Maui District Health Office District Environmental Health Program Chief Honolulu, HI 96801-3378 Ms. Patti Kitkowski State of Hawai'i P.O. Box 3378

SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÖWAI

HONOKŌWAI AHUPUA'A, KĀ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4001:015, (2) 4-4-002:003; MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN 008, 009, 011, 015, 018, AND 038

Dear Ms. Kitkowski,

On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your letter dated November 20, 2019 regarding the Pre-Assessment Consultation for the DHHI Honokōwai Master Plan.

We acknowledge your comments and provide the following responses.

- We acknowledge your comment regarding wastewater infrastructure. The forthcoming Draft Environmental Assessment (Draft EA) addresses wastewater infrastructure and any mitigations that are planned. As the Draft EA states:
- No adverse impact is anticipated regarding wastewater. Presently, the LWWRF has capacity available to accommodate the wastewater generated from the Master Plan Area. DHHL anticipates that the County would be able to provide the necessary regional infrastructure and DHHL will develop the onsite infrastructure to provide service to its beneficiaries in addition to operating and maintaining the onsite wastewater system. DHHL is also coordinating on a potential shared wastewater corridor within the Master Plan Area with the drainageways within the Master Plan Area, an onsite sewer lift station will be neighboring Pulelehua planned development. Due to the terrain and required to transport the wastewater generated onsite to the LWWRF.
- DHHL is anticipating the use of individual wastewater systems (IWS) for the include a 50-lot maximum for the use of IWSs, although if public benefit can be shown, a variance may be allowed. Lots with a minimum size of one acre (1- to 2-acre) agricultural lots. Currently, the Department of Health regulations can utilize an IWS, however, only one dwelling is allowed on the lot.
- We acknowledge your recommendation to review the department's website and have reviewed the information available in the link you provided. d

We appreciate your participation in the environmental review process. Your comments will

Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact Ms. Catie Cullison at (808) 521-5631. be reproduced in the Draft EA.

Sincerely,

July 6, 2021 Ms. Lene Ichinotsubo, P.E. Branch Chief State of Hawai 'i Department of Health – Solid and Hazardous Waste Branch P.O. Box 3378 Honolulu, HI 96801-3378	SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÓWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONKÓWAI AHUPUA'A, KÁ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 444-001:015, (2) 444- 002:003; 008, 009, 011, 015, 018, AND 038 Dear Chief Ichinotsubo,	On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your letter dated November 22, 2019 (your reference code S1106LI) regarding the Pre-Assessment	Consultation for the DHHL Honokowai Master Flan. luly 6, 2021	Ms. Sina Pruder, P.E. Chief	State of Hawai 'i Department of Health – Wastewater Branch	P.Ó. Box 3378 Honolulu, HI 96801-3378	SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÔWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT LOCATED IN	HONOKÓWAI AHUPUA'A, KĂ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4- 002:003;008,009,011,015,018,AND 038	Dear Chief Pruder,	On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your letter	DHHL Honokowai Master Plan ID4904) regarding the Pre-Assessment Consultation for the DHHL Honokowai Master Plan.	We acknowledge your office's comments (reproduced below, along with our response).	<ol> <li>We acknowledge your comment that if the development will consist of more than fifty dwelling units a wardewater treatment blant will be required to be constructed if the</li> </ol>	controls and a material relation point for connection. County's sever system is not available for connection.	Presentity, the LWWRF has capacity available to accommodate the wastewater generated from the Master Plan Area. DHHL anticipates that the County would be able to provide	he necessary regional infrastructure and DHHL will develop the onsite infrastructure to provide service to its beneficiaries in addition to operating and maintaining the onsite	wastewater system. DHHL is also coordinating on a potential shared wastewater corridor within the Master Plan Area with the neighboring Pullelehua planned development.	As stated in the forthcoming Draft EA, DHHL is anticipating the use of individual	wastewater systems (IWS) for the (1- to 2-acre) agricultural lots. Within the Master Plan Area. The EA notes that Department of Health regulations include a 50-lot maximum for	he use of IWSs, although if public benefit can be shown, a variance may be allowed. The EA also discusses the wastewater alternatives of utilizing IWS to service part of the	Master Plan Area, as opposed to the LWWRF servicing the entire Master Plan Area.

- There may be the potential for ground or surface water degradation/contantination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality. 6
- The proposed water supply source for the project is located in a designated water management area, and a Water Use Permit is required prior to use of water. The Water Use Permit may be conditioned on the requirement to use dual line water supply systems for new industrial and commercial developments. 10
  - A Well Construction Permit(s) is (are) are required before the commencement of any well construction ÷
    - Work.
- A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project. 12
- There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandoned and scaled. A permit for well abandomment must be obtained. 13
  - Ground-water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment. 4
  - A Stream Channel Alteration Permit(s) is (are) required before any alteration can be made to the bed and/or banks of a steam channel. 12
- A Stream Diversion Works Permil(s) is (are) required before any stream diversion works is constructed or altered. . 9
  - A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water. 24
- The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources. 18
- Planning Proposed waster sources and projected water demands for the project, both potable and non-potable, should be identified and the calculations used to estimate demands should be provided. A discussion of the potential impacts on water resources and other public trust uses of water is recommended, and any proposed mitigation measures should be described. Water conservation and efficiency measures to be implemented should also be discussed. X DTHER:

The County of Maul has updated their Water Use and Development Plan (WUDP), which is currently under review by the County Council. The Draft Environment al Assessment (DEA) should discuss the proposed in the WUDP and the consistency of the master plan with the resource strategies proposed in the WUDP. In addition, the DEA should discuss the consistency of the master plan with the State Water Projects Plan (2017) which restablishes potable and non-potable medis and sources for DHHL tracks.

Comments

The parcels included in the 850 actes of Trust Land making up the Houoköwai Master plan are located squarely in the West Maui priority watershed management area. Organizing as the West Maui Ridge to Reef Initiative (R2RI) turpi//westmauitz-couv). This effort is organized and oralized by the DLNR, Division of Aquate Resources, and includes many federal state and local control by the DLNR, Division of Aquate Resources, and includes many federal state and local consystem hath. The forces in these areas is addressing sediment, nutrients and contaminants teaving the land via runoff or groundwater. We work closely with landowners and developing and secking funding to support measures to limit the impacts of LBSP. We partnered with DHHL in 2013 on a project to address network Moving forward, we strongly urge DHHL to reach out to and include the West Maui Working Group in this planting process. A good points of contact is our watershed coordinator, Tova Callender (tovacallender@gmai.com, (8032)14-4239).

Since one of the healthiest remaining tracts of oreal reef in West Maui is immediately overstream of the Henokówai muster plan urea, hore are several additional additional additional done during the design and development portion that would help to protect the rest from further they addition. These actions include: 1) setting back all development activities 100-200 ft from the edge of the guldt wall (Historieully, the stream was aused to convey excess rain directed through terraces and telekouts, carrying with it frae particles of soil that are damuging to ocean ecosystems. By retraining a naturally vegetated aren as a buffer, water can influre rather than run off, while providing a market marker and use off. When the reaching the contribution are and use off this treated wastewater reclamation facility will assist with providing a constructive use for this treated wastewater reclamation facility will assist with providing a constructive use for this treated wastewater reclamation facility will assist with providing a constructive use for this treated areas is recommending for correcting to control the developed areas is recommending for controlling not only water maneagement within the developed areas is recommending for controlling not only water volume in storm events, but also quality improvements and informate accommention the set of the formation of the interval of the control of the terration of the developed areas is recommending for of the Northern Ka\* annybil area; and 3) finaming for and deploying a Low linpate Design (LD) approach to stormwater management within the developed areas is recommending for of the Northern Ka\* annybil area; and 3) finaming for and deploying a Low linpate Design (LD) approach to stormwater management within the developed areas is recommending for of the Northern Ka\* annybil area; and 3) financing for a control of the developed area is recommending for the Northern Ka\* annobil area; and 3) financing for a control of the developed areas is recommending for the developed area

In the past, several projects have taken place on connecting land to minimize sediment introduction from the network of off farm roads in the upper-eastern portions of the parcels. We look forward to partnering with DHHL on similar future projects to re-direct fackous into the lands cape rather than the guleh, and to create sediment auchment systems where redirection is no possible. In addition, we continue to strongly recommend the decommissioning of for roads that concenting and then vacue rule.

### DAR# 6036

# have been undertaken in other portions of the landscape and would likely also be appropriate on many select portions of the DHH.I. lands.

Comments

Currently, the coastal waters near the Honokowal Stream mouth routinely exceed state standard for turbuilty. We are working with the County Department of Public Works to increase the fine protocles that can be captured in their dam on the Honokówal Stream above the highway. However, as partners in the R2R, they have requested that we work colladoratively with all honowners to trap sediment higher up in the watershed since a treatment train approach is always more effective, protects the landscape, and spreads the minietnance requirements across stakeholders. We look forward to working more closely with DHLL to identify and implement solutions now that the planning stage of this project is underway. The mary partners of the West Maul Ridge to Reef Initiative are excited to see the beginning of the process to actively plan for and manage the DHHL Honoköwai lands. We are anxious to purprocess to actively plan for and manage the DHHL Honoköwai lands. We are anxious to marking real progress towards reducing land-based pollution and improving coastal water quality and marine coeystem heath. We look forward to active participation in the master planning process and to reviewing future draft environmental assessments and/or impact statements.

# Commission on Water Resource Management (CWRM)

We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information. Γ.

as Response: The Draft EA discusses the County of Maui's Water Use and Development Plan, noted below. We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan. ~i

Response: The Draft EA discusses State Water Projects Plan, as noted below.

We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at http://planning.hawaii.gov/czm/initiatives/low-impact-development/ 5.

Response: The Draft EA addresses best management practices for stormwater and a Preliminary Drainage Report is provided as an appendix to the Draft EA.

We recommend the use of alternative water sources, wherever practicable. 6 Response: The Draft EA discusses multiple sources of water including groundwater, surface (ditch) and recycled water.

and

infrastructure required to meet project needs. We acknowledge your comment that projects within State lands requiring water service from their local Department/Board of Water Supply system will be required to pay a resource development charge, in

We acknowledge your request that the Draft EA include water demands

and

infrastructure required to meet its needs. DHHL will pay all applicable fees relating to

water and other infrastructure.

Response: The Draft EA addresses water demand of the Master Plan Area,

addition to Water Facilities Charges for transmission and daily storage.

We acknowledge your comment that the applicant is required to provide water demands and calculations to the Engineering Division so it can be included in the State Water Response: DHHL is coordinating with the County of Maui Department of Water Supply.

DHHL has a water agreement in place with County.

We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at http://energy.hawaii.gov/green-business-program. К.

Response: DHHL will consider compatibility of its department's mission and programs with the Hawai'i Green Business Program. We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. These practices can be found online at http://www.hawaiiscape.com/wp-÷.

content/uploads/2013/04/LICH\_lrrigation\_Conservation\_BMPs.pdf.

Response: We acknowledge your recommendation. Section 3.4 of the Draft EA addresses potential impacts to water resources and water conservation measures, including those related to irrigation. Other. Planning - Proposed water sources and projected water demands for the project, both potable and non-potable, should be identified and the calculations used to estimate demands should be provided. A discussion of the potential impacts on water resources and other public trust
Mr. Russell Y. Tsuji SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÓWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKÓWAI AHUPUA'A, KÁ'ANAPALJ MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 44-001:015, (2) 44-002:003; 008 009, 011, 015, 018, AND 038 July 6, 2021 Page 4 of 5	Further we acknowledge your recommendations of <i>1</i> ) setting back all development activities 100-200 ft from the edge of the gulch wall	Further we acknowledge your recommendations of 1) setting back all development activities 100-200 ft from the edge of the gulch wall	<b>Response:</b> As noted in the Draft EA, the DHHL Honokōwai Master Plan includes a 100-foor setback from gulches, for conservation purposes.	2) Planning for the storage and use of RI water from the nearby Lahaina wastewater reclamation facility will assist with providing a constructive use for this treated wastewater which is currently being disposed of into injection wells, and ultimately seeping out onto and stressing nearshore reefs in the Northern Kä anapali area:	<b>Response:</b> The Draft EA addresses the use of recycled water (R-1 treated effluent) for irrigation of certain land use areas. The Draft EA states:	An alternative water source providing non-potable water is the R-1 treated wastewater from the Lahaina Wastewater Reclamation Facility (LWWRF). Recycled wastewater treated to the R-1 level can be used for solf course irrigation landscape irrigation and food crons. The	LWWRF treatment process is constructed to treat 100 percent of its effluent to R-1 quality standards.	The Draft EA notes that this proposed use is anticipated to have a positive impact with regard to LWWRF's existing injection wells, in that DHHL's use of a substantial quantity of R-1 quality effluent from the LWWRF would reduce the volume of R-1 effluent disposed of through injection wells. and	<ol> <li>Planning for and deploying a Low Impact Design (LID) approach to stormwater management within the developed areas is recommending for controlling not only water volume in storm events.</li> </ol>	but also quality improvements and increased infiltration. Response: The Draft EA includes LID strategies as a mitigation measure with positive impacts in the	areas of geology and topography, water resources, and the impacts of climate change. In the next several moniects have rulen place on connecting land to minimize sodiment introduction	from the network of off farm roads in the upper-eastern portions of the parcels. We look forward to partnering with DHHL on similar future projects to re-direct kickouts into the landscape rather than	the gulch, and to create sediment catchment systems where redirection is not possible. In addition, we continue to strongly recommend the decommissioning of old roads that concentrate and convey sediment laden-water to the stream and then ocean. These actions have been undertaken in other portions of the landscape and would likely also be appropriate on many select portions of the DHHL	untas. Currently, the coastal waters near the Honokõwai Stream mouth routinely exceed state standard for
Mr. Russell Y. Tsuji SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÔWAI MASTER PLAN SUBJECT: PRE-ASSESSMENT, LOCATED IN HONOKÔWAI AHUPUA'A, KA'ANAPALI ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKÔWAI AHUPUA'A, KA'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, July 6, 2021 Page 3 of 5	uses of water is recommended, and any proposed mitigation measures should be described. Water conservation and efficiency measures to be implemented should also be discussed.	uses of water is recommended, and any proposed mitigation measures should be described. Water conservation and efficiency measures to be implemented should also be discussed.	The County of Maui has updated their Water Use and Development Plan (WUDP), which is currently under review by the County Council. The Draft Environmental Assessment (DEA) should discuss the memosed findings in the WIJDP and the consistency of the master plan with the	resource are proposed in the WUDP. In addition, the DEA should discuss the consistency of the master plan with the State Water Projects Plan (2017) which establishes potable and nonpotable needs and sources for DHHL tracts.	Response: We acknowledge your comment regarding water sources, water resource impacts, and conservation measures. The Draft EA discusses multiple sources of water including groundwater, surface (ditch) and recycled water. The calculations used to estimate demands are provided in the Preliminary Infrastructure Analysis Report Which is an appendix to the Draft EA. Section 3.4 of	the Draft EA addresses potential impacts to water resources and any mitigation measures that are planned, including water conservation measures.	We acknowledge your comment regarding the WUDP and SWPP. Section 4.8.1 of the Draft EA states:	The CWRM State Water Projects Plan (SWPP) was adopted in May 2017 and identifies DHHL water needs as well as calculates potable and non-potable water demands based on DHHL plans. The Master Plan Area's projected long-term potable and non-potable water demands (2026 and beyond) are included in the SWPP. The SWPP accounts for 0.6179 mgd of potable water demand and 2.081 mgd of non-potable water demand for in the SWPP. The SWPP accounts for 0.6179 mgd of potable water demand demand (0.901 mgd) is greater than what accounted for in the SWPP. The non-potable water demand demand for in the SWPP.	demand (1.7 - 2.2 mgd) is generally in line with the demand accounted for in the SWPP. As noted in the SWPP, its projections are planning-level estimates and open to refinement	The County of Maui is in the process of updating its Water Use and Development Plan (WUDP). The Draft WUDP was submitted to the Maui County Council in 2019 for adoption by ordinance. An updated WUDP has not yet been formally adopted, however the draft WUDP generally	accounts for the Master Plan Area and therefore it is anticipated that water sources are adequate for future development. Moreover, DHHL has been coordinating closely with DWS, the author of the WIIDP to ensure that ademuse sunnit will be available.	Division of Aquatic Resources (DAR)	We acknowledge that the DHHL Honokōwai Master Plan is located in the West Maui priority watershed management area organizing as the West Maui Ridge to Reef Initiative (R2R), and we acknowledge your recommendation of DAR's watershed coordinator, Ms. Tova Callender as a point of contact.	Response: DHHL has met with Ms. Tova Callender. DHHL has provided a letter of support to Ridge to Reef Project and acknowledges their efforts to facilitate the sustainable development of

Mf. Russell Y. Tsuji SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÕWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKÕWAI AHUPU'A'A, KÄ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038

July 6, 2021 Page 5 of 5 However, as partners in the R2R, they have requested that we work collaboratively with all landowners to trap sediment higher up in the watershed since a treatment train approach is always more effective, protects the landscape, and spreads the maintenance requirements across stakeholders. We look forward to working more closely with DHHL to identify and implement solutions now that the planning stage of this project is underway. The many partners of the West Maui Ridge to Reef Initiative are excited to see the beginning of the process to actively plan for and manage the DHHL Honokôwai lands. We are anxious to partner with DHHL staff throughout the process and look forward to a future where we can start making real progress towards reducing land-based pollution and improving coastal water quality and marine cosystem health. We look forward to active participation in the master planning process and to reviewing future draft environmental assessments and/or impact statements.

**Response:** DHHL is amenable to meeting with R2R in the future, to identify opportunities for synergistic activities.

We appreciate your participation in the environmental review process. Your comments will be reproduced in the Draft EA.

Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact me at (808) 521-5631.

Sincerely,

SUBJECT: PRÉ-ASSESSMENT CONSULTATION FOR DHHL HONOKŌWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKŌWAI AHUPUA'A, KÃ'ANAPALIMOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2)4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038July 6, 2021 Page 2 of 3

3. We acknowledge your requirement not to attract wildlife, due to safety concerns.

Response: As noted above, the Draft EA addresses wildlife hazards to aircraft operations.

4. We acknowledge your comment regarding potential single event noise from aircraft.

### Response: The Draft EA states:

To mitigate impacts to site users related to airports and airfields, should DHHL suspect that fumes, smoke, noise, vibrations, odors, and other airport-related exposures may impact the anticipated uses of its lands, more protective mitigation strategies will be considered at such time, depending on the nature of the concern. Should other unforeseen impacts arise from aircraft activities which are not mitigated by the strategies described in this EA, DHHL will consider additional measures.  We acknowledge your comment regarding potential impacts from fumes, smoke, vibrations, odors, and other issues resulting from aircraft operations. **Response:** As noted above, the Draft EA addresses impacts from fumes, smoke, vibrations, odors, and other airport-related exposures.

 We acknowledge your concern regarding glint and glare hazards caused by photovoltaic systems, as well as radio frequency interference. **Response:** As noted above, the Draft EA acknowledges that photovoltatic systems can cause visual and/or radio interference for aircraft pilots, and that any such system in the Master Plan Area should be prepared for immediate hazard mitigation upon notification by HDOT and/or FAA.

### Highways Division (HDOT-HWY)

 We acknowledge your comment that a Transportation Impact Analysis Report (TIAR) should be included in the Draft EA.

Response: A TIAR is included as an appendix to the Draft EA

1.1 We acknowledge your comment that the TIAR should include any phasing plan and the transportation improvements of each phase.

**Response:** The Draft EA addresses conceptual phasing of the DHHL Honokōwai Master Plan, and DHHL will coordinate with HDOT-HWY regarding the requisite transportation improvements, as phasing is refined.

#### Mr. Jade T. Butay

SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKŌWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKŌWAI AHUPUA'A, KĀ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038July 6, 2021 Page 3 of 3

 We acknowledge your comment that the development should explore interconnectivity with adjacent developments in the vicinity.

**Response:** As noted in the Draft EA, DHHL is coordinating on a potential roadway connection with the neighboring Pulelehua development.

1.3 We acknowledge your comment that any proposed access onto the State Honoapt'ilani Highway should be limited and be coordinated with the DOT-HWY.

Response: As noted in the Draft EA, the Honokōwai Master Plan will limit access points to Honoapi'ilani Highway, and are being coordinated with DOT-HWY. We acknowledge your comment that the DEA and TIAR should account for the future Lahaina Bypass Phase 1D planned for the area which may bisect portions of the Master Plan Area.

Response: The Draft EA and TIAR address the future Lahaina Bypass Phase 1D.

We appreciate your participation in the environmental review process. Your comments will be reproduced in the Draft EA.

Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact Ms. Catie Cullison at (808) 521-5631.

Sincerely,

CCLLD

Dear Mr. Blackburn,

On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your letter dated November 20, 2019 regarding the Pre-Assessment Consultation for the DHHL Honokōwai Master Plan.

We acknowledge your comments and provide the following responses.

Rate Maps (FIRMS) and your comment that the County of Maui is a participant in We acknowledge your request that we review the current effective Flood Insurance the National Flood Insurance Program (NFIP). We acknowledge the NFIP floodplain management building requirements you provide in your letter. ---

**Response:** The DHHL Honokõwai Master Plan will comply with all applicable rules and regulations. To mitigate any potential impact of future flooding, no habitable structures will be built in the Zone A portion of the Master Plan Area. According to the FIRM, most of the Master Plan Area is designated Zone X.

We acknowledge that your department will review the proposed action again during the subdivision and permitting process. ci

Technical Assistance for the Pro-Assessment Consultation for DHHL Honokowai Master Plan, Lahaina, County of Maui (PO-19-2388) Subject:

Aloha Ms. Cullison:

The U.S. Fish and Wildlife Service (Service) received your correspondence on October 28, 2019 Ahuapua'a in Lahaina, Maui (TMKs: (2) 4-4-001.015, (2) 4-4-002:003, 008, 009, 011, 015, 018, for the pre-assessment review of the development of a community master plan for 850 acres of and 038]. The Service offers the following comments to assist you in your planning process so operation. Our comments are provided under the authorities of the Endangered Species Act of State of Hawai'i Department of Hawaiian Home Lands (DHHL) property in the Honoköwai that impacts to trust resources can be avoided through site preparation, construction, and (973 (ESA), as amended (16 U.S.C 1531 et seg.).

850 acres at Honokōwai. Anticipated uses of the area could include new homesteads, agricultural DHHL is currently in the process of developing a community plan for appropriate land uses on lots, parks and open space, light industrial, and community facilities, including church, private school facility, health care center, or community retreat.

potential to either be in or fly through the vicinity of the project area; the fielderally endangered compiled by the Hawaii Biodiversity and Mapping Project, five listed animal species have the band-rumped storm-petrel (Oceanadroma castro), Hawaiian goose (Branta sandvicensis) and Hawaiian hoary bat (*Lasturus cinéreus semons*), Hawaiian pettel (*Plerodroma hawailensis*), Based on information you provided and pertinent information in our files, including data and the federally threatened Newell's shearwater (Puffinus newell).

**Avoidance and Minimization Measures** 

We recommend the following measures to avoid and minimize impacts to listed species as the planning and development of these parcels moves forward:

#### Catic Cullison

#### Hawaitan hoary bat

taller are cleared during the pupping season, there is a risk that young bats could inadvertently be The Hawaiian hoary bat roosts in both exotic and native woody vegetation across all islands and harmed or killed since they are too young to fly or may not move away. Additionally, Hawaiian hoary bats forage for insects from as low as 3 feet to higher than 500 feet above the ground and will leave young unattended in trees and shrubs when they forage. If trees or shrubs 15 feet or can become entangled in barbed wire used for fencing.

To avoid and minimize impacts to the endangered Hawaiian hoary bat we recommend you incorporate the following applicable measures into your project:

- Do not disturb, remove, or trim woody plants greater than 15 feet tall during the bat birthing and pup-rearing season (June 1 through September 15).
  - Do not use barbed wire for fencing.

.= disorientation, fallout, and injury or mortality. Seabirds are attracted to lights and after circling structures or they may land on the ground. Downed scabirds are subject to increased mortality Young birds (fledglings) traversing the project area between September 15 and December 15, due to collision with automobiles, starvation, and predation by dogs, cats, and other predators Hawaiian seabirds may traverse the project area at night during the breeding, nesting and the lights they may become exhausted and collide with nearby wires, buildings, or other Hawalian seabirds (Hawalian petrel, band-rumped storm-petrel, Newell's shearwater) fledging seasons (March 1 to December 15). Outdoor lighting could result in seabird their first flights from their mountain nests to the sea, are particularly vulnerable.

To avoid and minimize potential project impacts to seabirds we recommend you incorporate the following applicable measures into your project description:

- Fully shield all outdoor lights so the bulb can only be seen from below bulb height and only use when necessary.
  - Install automatic motion sensor switches and controls on all outdoor lights or turn off lights when human activity is not occurring in the lighted area. •
- Avoid nighttime construction during the seabird fledging period September 15 through December 15.

### Hawaiian goose (Nënë)

grasslands and shrublands, and lava flows. Threats to the species include introduced mammalian and avian predators, wind facilities, and vehicle strikes. A small population breeds on west Maui Nënë are found on the islands of Hawai'i, Maui, Molokai'i, and Kaua'i. They are observed in a variety of habitats, but prefer open areas, such as pastures, golf courses, wetlands, natural and can be found in open lands, particularly near water bodies.

To avoid and minimize potential project impacts to nene, we recommend you incorporate the following applicable measures into your project description:

- Do not approach, feed, or disturb nene.
- nënë survey for nests in and around the project area prior to the resumption of any work. season (September through April), have a biologist familiar with the nesting behavior of Repeat surveys after any subsequent delay of work of 3 or more days (during which the If nene are observed loafing or foraging within the project area during the breeding

birds may attempt to nest).

July 6, 2021	Ms. Michelle Bogardus Island Team Leader, Maui Nui and Hawai'i Island United States Department of the Interior Fish and Wildlife Service Pacific Islands Fish and Wildlife Office	BUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÔWAI SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÔWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN	<ul> <li>PARIMANE HONOKOWAI AHUPUA'A, KĀ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038</li> <li>Dear Ms. Bogardus.</li> </ul>	On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your letter dated November 12, 2019 (your reference code 01EP1F00-2020-TA-0034) regarding the Pre-Assessment Consultation for the DHHL Honokowai Master Plan.	We acknowledge your comment that five listed animal species have the potential to either be in or fly through the vicinity of the Master Plan Area: Hawaiian hoary bat, Hawaiian petrel, band-rumped storm-petrel, Hawaiian goose, and Newell's shearwater. We acknowledge your office's recommendations of mitigations to minimize impacts to these species. In response to your comments, we provide this excerpt of the forthcoming Draft Environmental Assessment (Draft EA):	No significant adverse impact to botanical resources is anticipated. All presently observed native plant species at the Master Plan Area are relatively common in the state and are of no particular conservation concern. The Master Plan Area's gutches hold potential for ecological restoration, with small remnant parches of native plants still persisting that could be protected and expanded. Many of these native plants provide lei material and other potential resources for people and native insects. The biological consultant observed that many of the native plant species found in the area could be used in landscaping, as they are well adapted to the area.	As noted in Section 4.2, the Proposed Action may have a positive impact with regard to ethnic and/or native species, particularly plants, resulting from the intentional reintroduction of traditional practices and supporting resources.	If DHHL becomes aware of the presence of protected species, site users, onsite staff, and contractors will be notified.	The Hawaiian hoary bat's Endangered status provides special protections and some habitat considerations that ensure that they are not harmed or killed. The USFWS has jurisdiction over Endangered species under the authority of the Endangered Species Act (1973). These bats are wide ranging and may temporarily use this habitat in response to spikes in populations of nocturnal flying insects which they prev upon. These bats breed and raise their young between June 1 and September 15. Adults place their immature young in woody vegetation during the night when they forage, and tend

SUBJECT: PRE-ASSESSMENT CONSULTATION FOR DHHL HONOKÕWAI MASTER PLAN ENVIRONMENTAL ASSESSMENT, LOCATED IN HONOKÕWAI AHUPUA'A, KÄ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038 July 6, 2021

Page 2 of 2

to them during the day. To mitigate potential impacts to the bats, contractors at the Master Plan Area will be instructed to avoid site clearing activities between June 1 and September 15. If site clearing must occur during this time, the DLNR Division of Forestry and Wildlife will be consulted before disturbance, removal or trimming of woody vegetation taller than 15 feet. Furthermore, the bats forage for insects as low as three feet to higher than 500 feet above the ground, and therefore barbed wire will not be used for fencing during construction to mitigate harm to the bats caused by entanglement. Use of alternatives to barbed wire will be encouraged. Neither Nēnē nor Pueo were observed at the Master Plan Area, but to mitigate any impacts to these birds, reduced speed limits will be posted if any are found to be present. If breeding is found to be occurring at the Master Plan Area, the DLNR will be contacted for guidance.

To mitigate impacts to seabirds, DHHL will utilize appropriate exterior lighting such as hooded lights and avoidance of excessive lighting. Where feasible, outdoor lights at will be fully shielded so the bulb can only be seen from below bulb height, and only used when necessary. Nighttime construction will not occur between September 15 and December 15. It is possible that Blackburn's sphinx moths were present during the biological survey, but dormant in chrysalis form in the soil beneath the tree tobacco host plants. These plants should be examined again between November and April (the latter part of the wet season) to get a more definitive reading of their presence or absence. To mitigate any potential impacts to the Blackburn's sphinx moth, DHHL will follow all USFWS guidance and, if necessary, seek consultation with the USFWS prior to site clearing to address an appropriate plan for removal of existing tobacco plants. (The USFWS will be contacted for additional guidance, should nother on host plants over three feet in height be identified. Should no moths or host plants be enterligithe Master Plant Area and probilit tree tobacco from enterling the Master Plant Area.

It should be noted that the Master Plan Area is located approximately 1,000 feet from Kapalua Airport at its closest point. As such, DHHL will restrict agricultural activities that could attract wildlife that are potential hazards to aircraft operations. (Doing so will also benefit wildlife, ) We appreciate your participation in the environmental review process. Your comments will be reproduced in the Draft EA.

Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact me at (808) 521-5631.

CCULL Sincerely,

Catie Cullison, AICP Principal

DHHL PLANNING OFFICE

2021 AUG 19 AM 9: 57

Ms. Julie-Ann Cachola Senior Planner Department of Hawaiian Homes Lands P. O. Box 1879 Honolulu, Hawaii 96805

Dear Ms. Cachola:

SUBJECT: COMMENTS ON DRAFT ENVIRONMENTAL ASSESSMENT (EA) FOR DHHL HONOKOWAI MASTER PLAN, HONOKOWAI, ISLAND OF MAUI, HAWAII; TMK: (2) 4-4-001:015, 4-4-002:003, 008, 009, 011, 015, 018 AND 038 (EAC 2021/0004) The Department of Planning (Department) is in receipt of the above-referenced Draft EA (DEA) for the Department of Hawaiian Home Lands (DHHL) Honokowai Master Plan. For preparation of the Final EA (FEA), the Department provides the following comments:

- The updated West Maui Community Plan will soon be adopted by the County. The FEA should include an analysis of project compliance with West Maui Community Plan policies. The Master Plan's use of plants, Low Impact Design and recycled water are supported by the updated West Maui Community Plan that will soon be considered for adoption by the Council County. Also, designating the gulches within the Master Plan Area as open space along with an open space setback is supported by the updated West Maui Community Plan.
- The Department agrees on the preferred alternative, as this provides the highest and best use of land in order to benefit a greater number of Native Hawaiians. The Department supports the variety of residential unit types and commercial uses.

The Department notes that the master plan shows areas for single family and multi-family development segregated from each other. Developing residential areas with a mix and variety of housing types and sizes creates MAIN LINE (808) 270-3205 / LONG RANGE DIVISION (808) 270-7735 CURRENT DIVISION (808) 270-3205 / LONG RANGE DIVISION (808) 270-723

Ms. Julie-Ann Cachola August 13, 2021 Page 2 more attractive and functional neighborhoods that support families at all life stages. The Department recommends creating neighborhoods with a mix of single family and multi-family nomes. The DEA describes the multi-family area to be developed as low-rise (two- to three-story) townhomes with a density of 15 units per acre. The Department encourages DHHL to explore developing <u>Missing Middle Housing</u> (duplex, four-plex, courtyard building, cottage court, etc.) as an alternative, or in addition to townhomes. These building types can provide the density described in the DEA while also mixing well with single family homes and creating attractive and livable neighborhoods.

- DHHL is exempt from various land use controls for lands developed for homesteading purposes and this should be mentioned in the FEA. For the FEA, please ensure the information in the table is accurate.
- 4. The development timetable section does not include much information. The minimum required infrastructure improvements should be established in accordance with an estimated project phasing timeline to understand how the property will be developed. In addition, the development timetable notes that the master plan will be developed in two phases, hower the multi-family, commercial and industrial areas are not accounted for in the timetable. For the Final EA, please state when these areas ville bedveloped.
- equitable, convenient, safe and healthy living opportunities for all residents. Statistics indicate that pedestrian and bicycle related fatalities and injuries occur on both urban and rural roadways, and in some cases there are more pedestrian deaths in  $\underline{rural}$  areas than in urban areas. Maui Many traffic-related tragedies, including those involving pedestrians, can safety. In line with Vision Zero, Complete Street principles are also Complete Streets are designed and operated to enable safe access for all users including ages and abilities. Communities that are designed and constructed with these fundamental and critical planning principles provide for socially County has an adopted Vision Zero Maui Action Plan, which includes nput from the Vision Zero Advisory Group, community members and be prevented by taking a proactive and preventative approach to roadway pedestrians, bicyclists, motorists and transit riders (e.g. DOE, MEO) of all partners, and identifies strategies to eliminate preventable traffic deaths paramount to healthy and safe communities. and injuries. Ś.

Ms. Julie-Ann Cachola, Senior Planner August 13, 2021 Page 3 In light of the foregoing, the Department asks DHHL to consider dedicated pedestrian connectivity <u>throughout the project</u> via walkways/sidewalks made of grasscrete, asphalt or concrete (where appropriate). The DEA notes that all roads are intended to be dedicated to the County with shoulders and swales in keeping with the agriculturalrural character of the project and to minimize impervious surfaces. While shoulders and swales in agricultural and rural areas, in residential and commercial areas safe and confortable paths, sidewalks and crossings should be provided to accommodate all non-motorized users of roadways. Roadways in these areas should be designed as Complete Streets to help achieve the County's Vision Zero goal.

- 6. There are a few bicycle paths that are being proposed that are consistent with those principles. They extend through the project area but run in a west-east direction, and they do not extend to the southern-most project boundary. There are no bicycle paths that run mauka-makai toward Honoapillani flighway. For the FEA, the Department requests greater connectivity. We ask that multi-modal paths be considered for implementation, instead of bicycle paths to encourage community use of the shared paths. We also ask that they run east-west from no property boundary to the other, and extend mauka-makai to the highway, where there is public transportation service availability. The project will generate a number of dwelling units, and multi-modal paths will enable residents to traverse the area and may help to alleviate traffic impacts.
- 7. The proposed West Maui Greenway is a 25-mile multiuse path running from Ukumehame to Lipoa Point. The Maui Metropolitan Planning Organization (MPO) is working on a master plan for the greenway which will include a conceptual alignment and an implementation plan. The alignment of the greenway will parallel or cross the Honokowai Master Plan Area and DHHL is encouraged to work with the MPO on planning and implementation of the greenway as it will serve as a community resource for beneficiaries. Additionally, linkages between the West Maui Greenway and greenways within the subject project area should be identified.
- 8. The DEA notes that DHHL is coordinating on a potential roadway connection with the neighboring Pulelehua development located north of the Master Plan area. Please also coordinate with the planned Kaanapali

Ms. Julie-Ann Cachola August 13, 2021 Page 4 Town North development on a roadway connection to the south of the Master Plan Area.

- 9. For Section 4.10.3 relating to Recreational Facilities, there are no specifics on what kind and type of internal recreational facilities will serve the Master Plan Area. Will there be playground equipment, a community center, or other dedicated recreational facilities servicing the project? At a minimum, the project should include a playground, even if minimal in size, to serve its residents. Please consult with the Department of Parks and Recreation to determine what would be appropriate for a project of this size.
- 10. For the FEA, please provide a Water Resource Engineering Report showing the recommended site for the two proposed wells. Please confirm that the amount of water that will be generated, in addition to the County-allocated supply of 200,000-250,000 gallons per day (gpd), will be enough potable water to accommodate the estimated 901,080 gpd needed for the project. For the FEA, please also indicate how specifically DHHL plans to accommodate the full project need.
- 11. The DEA and Preliminary Engineering Report said that the Lahaina Wastewater Reclamation Facility has enough capacity to accommodate the wastewater to be generated from the project area. No projected wastewater number was provided. For the FEA, please include the estimated wastewater sources and flows associated with the proposed project.
- 12. Septic systems are also be installed. For the FEA, please indicate whether the systems will be installed at the homesteader's expense or whether DHHL plans to install a system for each lot.
- For the FEA, please indicate whether there will be private trash collection, or whether the County will provide service.
- 14. The Department strongly encourages the underground installation of utility lines to mitigate aesthetic and fire safety concerns. Please indicate if electrical, cable, and other similar type utilities will be placed underground, and if not, provide an explanation of why.
- As noted in the DEA, wildfire hazard is a significant issue in West Maui. However, the discussion and analysis of wildfire in the DEA is indicates

Ms. Julie-Ann Cachola, Senior Planner August 13, 2021 Page 5 that the Master Plan Area is not in a fire hazard area. The Hawaii Wildfire Management Organization (HWMO) considers the presence of existing development when identifying fire hazard areas. The Master Plan Area is directly adjacent to a High Hazard area. It should be made clear in the FEA that fire hazard is critical in this area.

- For the FEA, please double-check the boxes for the land use policies and controls, and ensure that all applicable boxes are checked.
- 17. Because of the residual pesticide risk, for the FEA, provide the result of an environmental consultant's sampling study. There could be a contamination risk associated with development of residences in that area, and it is a crucial component in environmental review.
- 18. The Preliminary Engineering Report says that the State will soon decide on the proposed location of the PEA, please show the chosen location in through the project area. For the FEA, please show the chosen location in all figures and plans. Bypass alignment may have significant impacts to overall ayout and functionality of the master plan, especially where the proposed bypass intersects with Honoapillani Highway since that will have a direct impact on the proposed alignment of access points to serve the proposed development. DHHL is encouraged to solidify the locations of the Lahaina Bypass corridor with the State Department of Transportation and collector roads with the County Department of Postbornents.
- 19. We note that the Honoapiilani Highway and Kakaalaneo Drive intersection will be operating at a Level of Service 'F' in both the a.m. and p.m. peak hours, as a result of this project. The Traffic Impact Assessment Report includes proposed mitigation for other intersections but does not provide any recommendations on what should be done for this one. For the FEA, please address this intersection.
- 20. Because the project will involve a substantial land area and there are a number of historic sites within the site, for the FEA, please include the results of an Archaeological Inventory Survey. There may be other sites that have not been identified, and should be included in the final environmental document to better gauge possible impacts to historic and cultural resources.

Ms. Julie-Ann Cachola August 13, 2021 Page 6

- 21. Given that the project will be approximately 1,000 feet away from the Kapalua Airport, a Federal Aviation Administration (FAA) Form 7460-1 Notice of Construction or Proposed Alteration will need to be submitted.
- 22. Please check with the Department of Transportation to see whether the proposed project will be a compatible use, according to the FAA Part 150, Airport Noise Compatibility Planning guidelines. Sound attenuation measures may be required in certain types of structures because of the close proximity to the Kapalua Airport.

Thank you for the opportunity to comment. Please include the Department on the distribution list for the new Final EA. Should you require further clarification, please contact Staff Planner Tara Furukawa by email at <u>tara.furukawa@mauicounty.gov</u> or by phone at (808) 270-8205.

Sincerely,

F. MICHELE MCLEAN, AICP Planning Director

MICHELE MCLEAN SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÓWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 3 of 8	MICHELE MCLEAN SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONKOWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 4 of 8
While DHHL would like to address the request regarding timing, development timetables for the Honokōwai Master Plan are directly related to sufficient funding from the State Legislature (and other political processes) which would not be possible to predict at this time. DHHL has actively pursued any	Lower Honoapi'llani Highway, and will contribute to the region's multimodal facilities where appropriate. The Final EA (Section 4.7.3) addresses public transit and multimodal facilities in greater detail.
funding opportunities that will facilitate the Honokowai Master Plan, and will continue to do so. 5. Many traffic-related traggedies, including those involving pedestrians, can be prevented by taking a proceeding and presentating antrococh to reachow selent. In line with Vision Zero, Complex Streed	While DHHL hopes to restablish use of existing cane roads in the Master Plan Area, it is possible that certain roadways will not be brought to County standards, particularly in areas of subsistence agricultural use. The Final EA reflects this possibility.
principles are also parament to healing and set communities. Complete Streets are designed and principles are also parament to healing and set communities. Complete Streets are designed and operated to enable safe access for all users including pedestrians, bicyclists, motorists and transit riders (e.g. DOE, MEO) of all ages and abilities. Communities that are designed and constructed with these fundamental and critical planning principles provide for socially equilable, convenient, safe and healthy living opportunities for all residents. Statistics indicate that pedestrian and bicycle related fundities and infinities occur on both when and the pedestrian and bicycle related	6. There are a few bicycle paths that are being proposed that are consistent with those principles. They extend through the project area but run in a west-east direction, and they do not extend to the southernmost project boundary. There are no bicycle paths that run mauka-makai toward Honoapiilani Highway. For the FE3, the Department requests greater connectivity. We ask that multi-modal paths be considered for inplementation, instead of for non-more schements, but we also ack that they run activence for more increased for more than non-more schements.
pedestrian deaths in rural areas than in urban areas. Maut County has an adopted Vision Zero Maut Action Plan, which includes input from the Vision Zero Advisory Group, community members and partners, and identifies strategies to eliminate preventable traffic deaths and injuries.	makai to the highway, where there is public transportation service availability. The project will generate a number of dwelling units, and multi-modal paths will enable residents to traverse the area and may help to alleviate traffic impacts.
In light of the foregoing, the Department asks DHHL to consider dedicated pedestrian connectivity throughout the project via walkways/sidewalks made of grasscrete, asphalt or concrete (where appropriate). The DEA notes that all roads are intended to be dedicated to the County with shoulders and swales in keeping with the agricultural-rural character of the project and to minize impervious surfaces. While shoulders and swales appropriate in agricultural and cranted strant convided to a mark to minize impervious surfaces. While shoulders and swales and swales are appropriate in agricultural and rural areas, in residential and commercial areas site and converted to a mark converted or the provided to and converting areas should be movided to a mark converting areas should be movided to a mark converting actions areas and converted to a mark converting actions and converting actions areas and converted to a mark converting actions areas and converted to a mark converting actions areas and converted to a mark converting actions actions actions and converting actions actions actions and converting actions a	<b>Response:</b> DHHL will consider multimodal options where practical, safe, and desirable for beneficiaries and other site users. As noted in our response to Comment 5, to preserve north-south connectivity across the Master Plan Area in the absence of the Bypass, DHHL is contemplating an additional fourth highway access, which would connect with the Halāwai Drive access. The Final EA (Section 4.7.3) addresses public transit and multimodal facilities in greater detail.
accommodate all non-motorized users of roadways. <b>Response:</b> Please be advised that in response to written comments from HDOT and in consultation with beneficiaries, DHHL has reallocated lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. Traffic and engineering studies have been updated accordingly. The Final EA shows the revised mater plan, with Bypass uses removed from LHLL lands. To preserve north-south connectivity across the Mater plan Area in the absence of the Rwass DHHL is contemplating an	the greenway will parallel or cross the Honokowai Master Plan Area and DHHL is encouraged to work with the MPO on planning and implementation of the greenway as it will serve as a community resource for beneficiaries. Additionally, linkages between the West Maui Greenway and greenways within the subject project area should be identified.
additional fourth highway access, which would connect with the Hālāwai Drive access. We acknowledge your comment. DHHL agrees with Planning Department's classification of the proposed community's general agricultural-rural character, but acknowledges that there are some higher density	<b>Response:</b> The Maui Metropolitan Planning Organization was consulted on the Honokõwai Master Plan. To the extent that any new proposed connectivity or infrastructure can be accommodated within the proposed Honokõwai Master Plan, DHHL will consider doing so. Generally, DHHL is supportive of multimodal and regional connectivity in the vicinity of its lands.
uses proposed, and DHHL is open to considering other improvements where appropriate, for example in areas designated for Community and Civic Uses.	8. The DEA notes that DHHL is coordinating on a potential roadway connection with the neighboring Pulelehua development located north of the Master Plan area. Please also coordinate with the planned
DHHL will take your office's recommendation into consideration during design, with the goal of creating a walkable community with consideration for cost, site drainage, and beneficiary preferences. DHHL will consider multimodal options where practical, safe, and desirable for beneficiaries and other site users. As noted in the EA (Section 4.7.3), DHHL will not impede the implementation of planned improvements on	Kā'anapali Town North development on a roadway connection to the south of the Master Plan Area.

MICHELE MCLEAN SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÓWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 5 of 8	MICHELE MCLEAN SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÓWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 6 of 8
<b>Response:</b> DHHL has reached out to Kā'anapali Land Management Corporation, expressing willingness to coordinate on roadway connections, and will continue to reach out as the Honokôwai Master Plan progresses.	12. Septic systems are also be installed. For the FEA, please indicate whether the systems will be installed at the homesteader's expense or whether DHHL plans to install a system for each lot.
9. For Section 4.10.3 relating to Recreational Facilities, there are no specifics on what kind and type of internal recreational facilities will serve the Master Plan Area. Will there be playground equipment, a community center, or other dedicated recreational facilities servicing the project? At a minimum, the project should include a playground, even if minima with the Department of Parks and Recretion to determine what would be annowning to rescue the and recreation to there if minima with the Department of Parks and Recretion to determine what would be annowned for a moviect	Response: Historically, DHHL lesses have been responsible for improvements to homestead lots. As the EA (Section 6.4) notes, Individual Wastewater Systems for certain homesteads are the anticipated preferred alternative, however the EA includes a discussion of pros and cons of providing sewer service to the entire Master Plan Area. 13. For the FEA, nease indicate whether there will be nrivate trash collection. or whether the County will
win the Department of 1 and and recreation to determine what would be uppropriate for a profess of this size.	1. голтие и дата решае пласцае мпелает плете мил об ратиак и изм сопесион, от мпелает пле сочину мил provide service.
<b>Response:</b> We acknowledge Planning Department's recommendation that the proposed action should include a playground. As the proposed action is for land use programming at the Master Plan Area (and not a project), project-level details about the Honokōwai Master Plan are not yet known and will be	<b>Response:</b> In response to your comment, the FEA will note this information. (It is intended that the County will provide service.)
developed in accordance with the wishes of DHHL's beneficiary community. As noted in the EA (Section 2.3), Community and Civic Uses fall into three general categories: agriculture, parks, and commercial. Park spaces could easily accommodate a playground, in consultation with site users. The County of Maui Department of Parks and Recreation was consulted on the Honokōwai Master Plan.	14. The Department strongly encourages the underground installation of utility lines to mitigate aesthetic and fire safety concerns. Please indicate if electrical, cable, and other similar type utilities will be placed underground, and if not, provide an explanation of why.
10. For the FEA, please provide a Water Resource Engineering Report showing the recommended site for the two proposed wells. Please confirm that the amount of water that will be generated, in addition to	<b>Response:</b> DHHL has not contemplated how utility lines will be installed, at this point in the development process. We acknowledge your comment, and will consider this recommendation.
the County-allocated supply of 200,000-250,000 gallons per day (gpd), will be enough potable water to accommodate the estimated 901,080 gpd needed for the project. For the FEA, please also indicate how specifically DHHL plans to accommodate the full project need.	15. As noted in the DEA, wildfire hazard is a significant issue in West Maui. However, the discussion and analysis of wildfire in the DEA is indicates that the Master Plan Area is not in a fire hazard area. The Hawaii Wildfire Management Organization (HWMO) considers the presence of existing development when identifying fire hazard areas. The Master Plan Area is directly adjacent to a High Hazard area.
<b>Response:</b> Consistent with Chapter 14.12, Maui County Code, DHHL will provide verification of a long- term, reliable supply of water including a Water Resource Engineering Report, <i>before applicable</i>	It should be made clear in the FEA that fire hazard is critical in this area.
subdivisions are approved.	<b>Kesponse:</b> The EA (Section 5.5.7) notes the significance of wildfires in West Maui in recent years, and describes the development of wildfire hazard scores. In response to your comment, the FEA will note that
11. The DEA and Preliminary Engineering Report said that the Lahaina Wastewater Reclamation Facility has enough capacity to accommodate the wastewater to be generated from the project area. No	developed areas of Kāʿanapali, west of the Master Plan Area, are designated as High Hazard areas.
projected wastewater number was provided. For the FEA, please include the estimated wastewater sources and flows associated with the proposed project.	16. For the FEA, please double-check the boxes for the land use policies and controls, and ensure that all applicable boxes are checked.
<b>Response:</b> Appendix F of the EA contains the revised Preliminary Infrastructure Analysis Report which includes revised wastewater calculations (Appendix C of the Preliminary Infrastructure Analysis Report). According to Appendix C, wastewater generation for the anticipated preferred alternative was calculated to be 380,915 gpd. The Final EA (Section 4.8.2) has been revised to more clearly state this number. Wastewater generation for "Subsistence Agriculture (Homesteads) with Community Farming Alternative" and "Subsistence Agriculture Only Alternative" are also provided in the analysis.	<b>Response:</b> The EA does note that the Hawaiian Homes Commission Act (Sections 204 and 206) vests DHHL with exclusive authority to control its lands. However, DHHL does consider conformance with land use controls (regardless of being exempt) to facilitate interagency coordination and planning.

MICHELE MCLEAN SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÓWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 7 of 8	MICHELE MCLEAN SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKŌWAI MASTER PLAN, ISLAND OF MAUI February 3, 2022 Page 8 of 8
17. Because of the residual posticide risk, for the FEA, provide the result of an environmental consultant's sampling study. There could be a contamination risk associated with development of residences in that area, and it is a crucial component in environmental review.	20. Because the project will involve a substantial land area and there are a number of historic sites within the site, for the FE4, please include the results of an Archaeological Inventory Survey. There may be other sites that have not been identified, and should be included in the final environmental document to better eause possible inmacts to historic and cultural resources.
<b>Response:</b> We acknowledge your comment. The EA (Section 4.6) addresses residual pesticide risks, and states the mitigation measures that DHHL will adhere to.	<b>Response:</b> The EA addresses archaeological and historic resources and describes proposed mitigation measures. A messrvation plan will be implemented following HRS 6F-8 review, and DHHL will comply
18. The Preliminary Engineering Report says that the State will soon decide on the proposed location of the portion of the Lahaina Bypass that will run through the project area. For the FEA, please show	with all laws and rules regarding preservation of archaeological and historic sites
the chosen location in all figures and plans. Bypass alignment may have significant impacts to overall layout and functionality of the master plan, especially where the proposed bypass intersects with Honoapiilani Highway since that will have a direct impact on the proposed alignment of access points to serve the proposed development. DHHL is encouraged to solidify the locations of the Lahaina	21. Given that the project will be approximately 1,000 feet away from the Kapalua Airport, a Federal Aviation Administration (FAA) Form 7460-1 Notice of Construction or Proposed Alteration will need to be submitted.
Bypass corridor with the State Department of Transportation and collector roads with the County Department of Public Works prior to finalizing subdivision and other related development documents.	<b>Response:</b> We acknowledge your comment, and DHHL will comply with FAA requirements as applicable. The State of Hawai'i Department of Transportation and Federal Aviation Administration were consulted on the Honokōwai Master Plan.
<b>Response:</b> As noted above, in response to written comments from HDOT and in consultation with beneficiaries. DHHL has reallocated lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. Traffic and engineering studies have been updated accordingly. The Final EA shows the revised master plan, with Bypass uses removed from DHHL lands. To preserve north-south connectivity across the Master Plan Area in the absence of the Bypass, DHHL is contemplating an additional fourth highway access, which would connect with the Häläwai Drive access.	22. Please check with the Department of Transportation to see whether the proposed project will be a compatible use, according to the FAA Part 150, Airport Noise Compatibility Planning guidelines. Sound attenuation measures may be required in certain types of structures because of the close proximity to the Kapalua Airport.
19. We note that the Honoapiilani Highway and Kakaalaneo Drive intersection will be operating at a Level of Service 'F' in both the a.m. and p.m. peak hours, as a result of this project. The Traffic Impact Assessment Report includes proposed mitigation for other intersections but does not provide any recommendations on what should be done for this one. For the FEA, please address this intersection.	<b>Response:</b> We acknowledge your comment, and DHHL will comply with FAA requirements as applicable. The State of Hawai'i Department of Transportation and Federal Aviation Administration were consulted on the Honokōwai Master Plan. As noted in the EA (Section 4.10.4), to mittgate impacts to site users related to airports and airfields, should DHHL suspect that fumes, smoke, noise, vibrations, odors, and other airport-related exposures may impact the anticipated uses of its lands, more protective mitigation
<b>Response:</b> As noted above, in response to written comments from HDOT and in consultation with beneficiaries, DHHL has reallocated lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. Traffic and envincering studies have been undated accordingly.	strategres will be considered at such time, depending on the nature of the concern. Should other unforeseen impacts arise from aircraft activities which are not mitigated by the strategies described in this EA, DHHL will consider additional measures.
The unsignalized intersection of Honoapi'ilani Highway and Kaka'alance Drive is forecast to operate deficiently (LOS E/F) under 2028 baseline no-action and with-action conditions. A significant impact is defined to occur at unsignalized intersections if operations change from LOS D or better to LOS E or F.	We appreciate your participation in the environmental review process. Your letter will be reproduced in the Final Environmental Assessment. Please feel free to forward this letter to all appropriate parties. If you have any questions, please contact me at (808) 521-5631.
or if LOS E or F operations are exacerbated, and one or more signal warrants are met. Signal warrants	Sincerely,
were conducted for the intersection under 2028 with-action conditions and concluded that signals were not warranted (signal warrant worksheets are included in Appendix D of the traffic study). Therefore, the	Call
impact is not considered significant. It may also be noted that the critical movement is the makar-bound left-turn and intersection operations along the highway operate at LOS C or better. The proposed action will not be adding any refifts to the critical moreover, two-scherned), therefore mitigation is not recurring	Catre Cullison, AICP Principal

On 07/12/2021, I received the draft environmental assessment in regards to the Department of Hawaiian Homelands Honokowai Master Plan. The project is located in the Honokowai area located north east of the Lahaina Waste Water Reclamation Plant, East of Honoapillani Highway, south of the future Pulehua development and south west of the Malinahina Water Treatment Plant. The entire project sile located for west of the Malinahina Water Treatment Plant. The entire project will feature 250 homes on one to two acre lots, 335 single family homes on 7,500 square lots, 543 multi-family residents on 35 acres and a community park. The number of people residing within the development will increase the number of vehicles on the roadway. The amticipation of the future Lahaina Bypass passing through the project will bark.	Additional Police bears are needed in the area. ASSESSMENT, LOCATED IN HONOKÓWAI AHUPUA'A, KÁ'ANAPALI MOKU, LAHAINA DISTRICT, COUNTY OF MAUI, TMK (2) 4-4-001:015, (2) 4-4-002:003; 008, 009, 011, 015, 018, AND 038 SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT CONSULTATION FOR DHHL HONOKÖWAI MASTER PLAN ENVIRONMENTAL

Dear Chief Pelletier,

FHOMAS S. WITTEN, FASLA

V. FRANK BRANDT, FASLA

XAYMOND T. HIGA, ASLA Associate Principal

ARC SHIMATSU, ASLA

On behalf of the Department of Hawaiian Home Lands (DHHL), thank you for your office's letter dated July 27, 2021 regarding the Draft Environmental Assessment (Draft EA) consultation for the DHHL Honokowai Master Plan.

We acknowledge and agree with your description of the proposed action.

IG DONG, LEED\* AP Principal MIKIKO BOUSLOG, PhD

We acknowledge your concerns regarding additional vehicles and residents in the area, which will affect MPD's operations in Honokowai. We acknowledge that MPD would like a more detailed traffic study or plan. **Response:** The Final EA addresses traffic mitigation efforts regarding impacts of the proposed project. Section 4.10.2 has been revised to include coordination with the County of Maui Police Department (MPD), regarding traffic.

We acknowledge your comment that additional police beats may be needed I the area

RACE ZHENG, ASLA, LEED<sup>a</sup> GA, SITES<sup>a</sup> AP

UYO KILA REG NAKAI

AICAH McMILLEN, ASLA, LEED\* AP

ATHALIE RAZO

AMSAY R. M. TAUM

Response: Section 4.10.2 of the Final EA has been revised to note that DHHL will work with MPD to ensure that adequate law enforcement and safety services will be available to the future community.

We acknowledge your comments regarding the Lahaina Bypass (Phase 1-D).

Response: Please be advised that in response to written comments from the State Department of Transportation, DHHL has reallocated lands conceptually reserved for the Bypass, in favor of other DHHL and/or beneficiary uses. Traffic and engineering studies have been updated accordingly. The Final EA shows the revised master plan, with Bypass uses removed from DHHL lands. To preserve north-south connectivity across the Master Plan Area in the absence of the Bypass, DHHL is contemplating an additional fourth highway access, which would connect with the Halawai Drive access.

### Water Quality Pollution Prevention

Construction Best Management Practices (BMPs) for Pollution Prevention

To protect ground and surface water resources, we recommend that in addition to required BMPs, the following measures designed to conserve water and minimize infiltration and runoff be implemented during construction:

- 1. Prevent cement products, oil, fuel and other toxic substances from falling or leaching into the ground. Remove all construction debris and toxic substances daily to prevent entry into the ocean.
- Properly install and maintain erosion control barriers such as silt fencing or straw bales. 'n
  - Disturb the smallest area possible. ы.
- planting as soon as possible. Use high seeding rates to ensure rapid stand establishment. Retain ground cover until the last possible date. Stabilize denuded areas by sodding or Apply biocides only during dry periods of low rainfall to minimize chemical run-off. 4.
- Replanting of denuded areas should include soil amendments and temporary irrigation. Use Keep runoff on-site. ы. <u>.</u>
  - Concrete trucks and tools used for construction should be rinsed off-site. high seeding rates to ensure rapid establishment of stands of plants. 2.

#### Septic System BMPs

#### Ms. Julie-Ann Cachola August 9, 2021

The MDWS highly recommends that the applicant inform future homeowners to utilize these BMPs for septic systems

- Have the septic system inspected annually and pumped out regularly.
- No chemical or other additive can be a substitute for regular pumping. Septic System chemicals can prevent the septic system from functioning properly.
- chemicals like paints, solvents, oil, and pesticides from entering the system and potentially Use caution about what you put into the system. Substances like coffee grounds, cigarette butts, sanitary items, or fats do not break down easily in septic systems. Prevent strong entering the groundwater. m.
- Practice water conservation to increase septic system life span. Limit the amount of water entering the system by using water-saving fixtures and appliances. 4
  - Keep roof drains and storm water runoff away from the drain field area.
  - Keep the leaching area free of vehicles, buildings, trees and shrubs. ю. Ю
- Keep accurate records of on-site maintenance activities. 2
- Keep an accurate map of the location of all system components. <sub>s</sub>

### <u>Agricultural Business</u> BMPs

Improperly cleaned containers that are stockpiled or buried could also be potential sources of ground Contamination of ground water can occur when pesticides, herbicides, fertilizer, fungicides and/or other chemicals are spilled. Contamination can also happen when rinse water from containers or equipment cleaning is dumped on the ground or into surface waters such as streams or ponds. water contamination.

- Locate operations as far as possible from groundwater wells and areas that may drain into surface water bodies such as streams, the ocean, or ponds. ij.
- Know and comply with regulations governing the storage, handling and application, and disposal of hazardous substances. 2 N
  - Adopt the "First in First out" Principle. The "First in First out" Principle directs you to use your oldest chemicals first, in order to ensure that they don't expire. ć.
    - Keep pesticides locked or inaccessible to the public in an area separate from areas used to store other materials, such as fertilizers, feed, and seed. Segregate and label 4
      - Keep a written pesticide inventory and Material Safety Data Sheet (MSDS) file for the herbicides, insecticides and fungicides to prevent cross-contamination. chemicals used on-site of your operations. ы.
- Arrange pesticide containers in the storage area, so that labels are clearly visible, and make sure the labels can be read. . ف
- Place bags of DRY pesticides and other chemicals on raised, plastic pallets to ensure that they do not get wet. Do not store any liquid materials above dry chemicals Ч.
- Use shelving made of plastic or reinforced metal. Keep metal shelving painted or invest in and use stainless steel to avoid corrosion. NEVER use wood shelving! Wood shelving may absorb spilled pesticide and other chemical materials. <sub>∞</sub>
- Store potential pollutants in sealed, leak-proof, and labeled containers. б.

### Ms. Julie-Ann Cachola August 9, 2021 Page 4

- 10. Do not transport, handle, store, load, apply or dispose of any hazardous substance in a way that may pollute water supplies or cause damage or injury to land, including human, plants or animals.
- Isolate all potential contaminants from soil and water.
- 12. Keep drip pans or containers under vehicles and/or equipment that may drip during repairs. Collect oil from drip pans and recycle.
  - 13. Do not discharge any waste material onto the ground.
- spill, the less chance there is that it will contaminate our groundwater. Always use the 14. Clean up spills as soon as possible. The sooner you contain, absorb, and dispose of a appropriate personal protective equipment as indicated on the MSDS and chemical label.
- 15. Always remember the 4 steps to preventing contamination:
- CONTROL actively spilling or leaking materials by setting the container upright;
  - CONTAIN the spilled material using barriers and absorbent material;
- COLLECT spilled material, absorbents, and leaking containers and place them in a secure
  - STORE the containers of spilled material until they can be applied as a pesticide or and properly labeled container;
- 16. Report all spills to the Department of Health, Environmental Health Administration and/or Environmental Protection Agency as required by state and federal laws. appropriately disposed.
  - 17. Consider using Integrated Pest Management as an alternative to chemical use. Find more information and training at the State of Hawaii, Department of Health, Vector Control Branch's website <u>http://health.hawaii.gov/vcb.</u>

### Industrial Uses and Possible BMPs

business/activity-appropriate BMPs should be implemented for the proposed processing, construction, manufacturing, transportation, wholesale, warehousing, agriculture related industry and other light Once prospective tenants and uses are known for the sixteen acres planned for industrial use, industrial activities

### Indoor Water Conservation BMPs

The MDWS recommends the following indoor conservation measures be implemented:

- Use EPA WaterSense labeled plumbing fixtures.
- Install dual flush toilets with high-efficiency models that use 1.28 gallons per flush or Install flow reducers and faucet aerators in all plumbing fixtures wherever possible. . m
- Install showerheads with a flow rate of 1.5 gallons per minute at 60 pounds per square less. 4.
  - Install bathroom sink faucets with fixtures that do not exceed 1gpm at 60 psi. inch (psi)
    - ы. . 0
- Laundry facilities and/or individual unit machines should use Energy Star-labeled washers.

## Water Quality Pollution Prevention BMPs

We acknowledge your suggested Best Management Practices (BMPs) to ensure water quality and pollution prevention, including:

- Construction BMPs
- Septic System BMPs
   Agricultural Business BMPs
- BMPs relating to industrial use

**Response:** Several sections of the EA address construction BMPs, including Sections 3.3 and 3.4 which relate to conservation of soil and water resources, respectively.

In response to your comment regarding septic system BMPs, Section 4.8.2 of the EA will note that any beneficiaries utilizing individual septic systems will be encouraged to implement BMPs for septic systems, to minimize environmental impacts and maintenance costs. Section 3.3 of the EA includes BMPs to protect soil resources. In response to your comment, Section 3.3 will note that site users of agricultural areas will be encouraged to implement BMPs for agricultural chemicals including pesticides, to minimize environmental impacts.

We acknowledge your comment regarding industrial use BMPs. Industrial tenants or users will be encouraged to employ responsible practices, with appropriate BMPs varying depending on the nature of the use. As noted in Section 4.2, prospective industrial and/or commercial users who employ a malama 'aina land stewardship ethic will be considered favorably by DHHL from a cultural standpoint.

### Water Conservation BMPs

We acknowledge your suggested BMPs for indoor water conservation, including:

- Indoor Water Conservation BMPs
- Outdoor Water Conservation BMPs

Response: The EA (Section 3.4) addresses indoor and outdoor water conservation BMPs that will be encouraged for site users.

We appreciate your participation in the environmental review process. Your letter will be reproduced in the Final Environmental Assessment.

Subject: [EXTERNAL] Honokowai Draft Environmental Assessment

Aloha kākou,

the residential list and was never invited by DHHL. I have many siblings, cousins, and myself who are on the list for West Maui residential who were never invited to attend either. We are on agriculture list too, but much higher for residential. is very high on l was very disappointed to hear about the Honokowai Plan being changed so dramatically. And not taking into account my immediate and extended family's wishes for residential in the first phase. I attended one meeting. I only heard invited me last minute, literally a few minutes before it began. My about it because

and if she doesn't get a residential lot in this decade in Lahaina, she it's very sad because my family is now 4 generations deep in the waitlist without a lot from Hawaiian Homes. My died on the list. My will also die on the list.

and he didn't get it. So she asked again and they said it was too late. That is so immoral. They sent her to the back of the line. That's one reason why my family hasn't gotten a lot. But my was still waiting twice as long as people who got in at Leialii 1A. She asked for a lot and they told her they already gave them away. DHHL has a history of not informing got on the list in the 1940's and DHHL refused to give any of his family water credits to Kahoma housing and built homes for tourists to have vacation homes. That added salt to the wound. I got the spot. Later she checked again r eally don't like what has been done about Hawaiian homes residential in Lahaina. I dislike how DHHL sold Leialii 1B can never get a straight answer on where Leialii 1B is at for development. DHHL tries their hardest to not give me an asked and she was told her people so they can get a lot. It's so immoral. answer and give me lots of excuses. My his spot on the list after he passed. My

l would like it if the first phase for Honokowai included half residential. I was in the meeting and I have my testimony for . I put my comments in the chat which I did see the meeting presenter was checking the chat and commenting about our comments. And I didn't verbally say it because there were people who were taking over the microphone. The meeting was very unorganized and people were very aggressive. To get a word in, we had to be very aggressive. So I chose to voice my opinion in the chat. that. And other people also were supportive of that like

waitlister and the Native Hawaiian Health Care Act fails to provide him with rehabilitation and the Hawaiian Homeland who are in their 20's and 30's. He could give them his lot residential. I know this because they have said this at meetings! Besides, usually people are offered residential before agriculture since the list is shorter for residential. My family has nothing. 4 generations and no lot! That's crazy!!! And Commission Act also is not being honored. Hawaiians have the highest rates of homelessness, substance use disorder, poverty, incarceration because the U.S. caused so much trauma and the State refuses to properly rehabilitate us. I am Many of the homes built off Hawaiian Home Commission act beneficiaries water credit went to build vacation homes how horrible how DHHL doesn't answer my questions about Leialii 18!!!! I ask for updates and they give me the run who is living homeless next to Kahoma housing. He is a around. I found out from digging that DHHL sold our water credits!!! Why? There is no good reason. It's corruption. For me, this is so horrible what is being done. Many people who are pushing for agriculture lots already have their and a for them to build a home and they would allow him has two for tourists!!!! I included a photo of my advocating for my family.

To stay. So he can have supportive family to help him with his mental illness.

so aggressive to push us aside on the residential list because they just want agriculture served first. They can't share? . We are supposed to be a "Lahui." How selfish to be that got residential. How selfish. My family is so upset with Many of them have

2006. Her I feel that is so wrong to do this. As for my family that have been waiting so many years for residential-1999. Kanani Higbee 2006. 1999. since 1986. that
